## LT4670

### SYNC GENERATOR

|              |                    |
|--------------|--------------------|
| LT4670-SER01 | GNSS               |
| LT4670-SER02 | SDI                |
| LT4670-SER03 | PTP                |
| LT4670-SER04 | 25G-IP/12G-SDI TSG |
| LT4670-SER11 | POWER UNIT         |
| LT4670-SER21 | 4K 3G-Quad Link    |

### Instruction Manual

Thank you for your purchase.

Please read this instruction manual and the included "GENERAL SAFETY SUMMARY" thoroughly, and use the product safely.

# TABLE OF CONTENTS

|  |           |
|--|-----------|
| GENERAL SAFETY SUMMARY .....                 | I         |
| <b>1 INTRODUCTION .....</b>                  | <b>1</b>  |
| 1.1 User Registration.....                   | 1         |
| 1.2 Scope of Warranty.....                   | 1         |
| 1.3 Trademark Acknowledgments .....          | 1         |
| 1.4 Operating Precautions.....               | 2         |
| 1.4.1 Power Supply Voltage .....             | 2         |
| 1.4.2 Maximum Allowable Input Voltage .....  | 2         |
| 1.4.3 Mechanical Shock .....                 | 2         |
| 1.4.4 Electrostatic Damage .....             | 2         |
| 1.4.5 Warming Up.....                        | 2         |
| <b>2 PRODUCT CONFIGURATION.....</b>          | <b>3</b>  |
| 2.1 Main Unit .....                          | 3         |
| 2.2 Hardware Options .....                   | 3         |
| 2.3 Software Options .....                   | 4         |
| <b>3 SPECIFICATIONS.....</b>                 | <b>5</b>  |
| 3.1 General .....                            | 5         |
| 3.2 Features.....                            | 5         |
| 3.2.1 LT4670.....                            | 5         |
| 3.2.2 LT4670-SER01 (GNSS).....               | 7         |
| 3.2.3 LT4670-SER02 (SDI).....                | 7         |
| 3.2.4 LT4670-SER03 (PTP) .....               | 8         |
| 3.2.5 LT4670-SER04 (25G-IP).....             | 9         |
| 3.2.6 LT4670-SER04 (12G-SDI).....            | 9         |
| 3.2.7 LT4670-SER11 (POWER UNIT) .....        | 11        |
| 3.2.8 LT4670-SER21 (4K 3G-Quad Link).....    | 11        |
| 3.3 Standards.....                           | 13        |
| 3.3.1 LT4670.....                            | 13        |
| 3.3.2 LT4670-SER01 (GNSS).....               | 21        |
| 3.3.3 LT4670-SER02/SER04/SER21 (SDI).....    | 22        |
| 3.3.4 LT4670-SER03 (PTP) .....               | 29        |
| 3.3.5 LT4670-SER04 (25G-IP).....             | 31        |
| 3.3.6 LT4670-SER11 (POWER UNIT) .....        | 33        |
| 3.3.7 SFP Transceiver (Sold Separately)..... | 34        |
| <b>4 PANEL DESCRIPTION.....</b>              | <b>35</b> |
| 4.1 Front Panel.....                         | 35        |
| 4.2 Rear Panel.....                          | 38        |

|          |  |           |
|----------|--|-----------|
| <b>5</b> | <b>PREPARATIONS.....</b>                   | <b>42</b> |
| 5.1      | Installation .....                         | 42        |
| 5.1.1    | Rack Mounting .....                        | 42        |
| 5.1.2    | Installation Without Using a Rack .....    | 43        |
| 5.2      | Turning the Power On .....                 | 44        |
| 5.2.1    | Turning the Instrument On and Off.....     | 44        |
| 5.2.2    | Mounting the AC Cord Clamp .....           | 45        |
| 5.2.3    | Adding the Power Supply Unit (SER11) ..... | 46        |
| <b>6</b> | <b>BASIC OPERATION .....</b>               | <b>48</b> |
| 6.1      | Operation Basics .....                     | 48        |
| 6.1.1    | Connecting a USB Memory Device .....       | 48        |
| 6.1.2    | Enabling the Key Lock .....                | 48        |
| 6.1.3    | Menu Operations .....                      | 49        |
| 6.2      | Signal Input (Genlock Operation) .....     | 52        |
| 6.2.1    | Internal Mode .....                        | 53        |
| 6.2.2    | Genlock Mode .....                         | 54        |
| 6.2.3    | CW Mode.....                               | 56        |
| 6.2.4    | GNSS mode (SER01).....                     | 58        |
| 6.2.5    | PTP mode (SER03) .....                     | 60        |
| 6.3      | Signal Output.....                         | 63        |
| 6.3.1    | Analog Black Signal Output.....            | 63        |
| 6.3.2    | Audio Signal Output.....                   | 63        |
| 6.3.3    | CW/1PPS Signal Output.....                 | 63        |
| 6.3.4    | SDI Signal Output (SER02) .....            | 63        |
| 6.3.5    | SDI Signal Output (SER04) .....            | 64        |
| 6.3.6    | PTP Signal Output (SER03) .....            | 64        |
| 6.3.7    | IP Signal Output (SER04) .....             | 66        |
| 6.4      | LTC Signal I/O and Remote Control .....    | 67        |
| 6.5      | Alarm Display .....                        | 69        |
| 6.6      | L-SYNC .....                               | 70        |
| <b>7</b> | <b>REFERENCE CONFIG MENU .....</b>         | <b>72</b> |
| 7.1      | Selecting the Reference Signal .....       | 72        |
| 7.2      | Selecting the Genlock Format .....         | 73        |
| 7.3      | Setting the Genlock Timing.....            | 74        |
| 7.4      | Selecting the Satellite (SER01).....       | 74        |
| 7.5      | Setting the Recovery Operation.....        | 75        |
| 7.5.1    | Selecting the Recovery Mode .....          | 75        |
| 7.5.2    | Selecting the Relock Speed (Auto) .....    | 75        |
| 7.5.3    | Selecting the Relock Speed (Manual).....   | 76        |
| 7.5.4    | Power-on Settings .....                    | 76        |
| 7.6      | Setting the Relock .....                   | 76        |
| 7.7      | Selecting the Time Source .....            | 77        |
| 7.8      | Setting the Noise Immunity .....           | 79        |
| 7.9      | Loading the Date and Time .....            | 79        |

|           |   |           |
|-----------|---|-----------|
| 7.10      | Setting the Time Lag Alarm .....                          | 80        |
| 7.10.1    | Turning the Time Lag Alarm On and Off .....               | 80        |
| 7.10.2    | Setting the Time Lag Alarm Time .....                     | 80        |
| <b>8</b>  | <b>BLACK CONFIG MENU .....</b>                            | <b>81</b> |
| 8.1       | Selecting the Black Format .....                          | 81        |
| 8.2       | Configuring Timing Data .....                             | 82        |
| 8.2.1     | Adjusting the Timing (Frame) .....                        | 82        |
| 8.2.2     | Adjusting the Timing (Line) .....                         | 82        |
| 8.2.3     | Adjusting the Timing (Dot) .....                          | 83        |
| 8.3       | Setting the Time Code .....                               | 83        |
| 8.3.1     | Turning Time Code Insertion On and Off.....               | 83        |
| 8.3.2     | Setting Dropped Frames.....                               | 84        |
| 8.3.3     | Setting the Time Code Superimposition Line .....          | 84        |
| 8.4       | Setting the Black Output .....                            | 85        |
| 8.4.1     | Turning the Black Output On and Off.....                  | 85        |
| 8.4.2     | Turning BMCA Linkage On and Off (SER03) .....             | 85        |
| 8.5       | Settings Shared by Black Outputs.....                     | 86        |
| <b>9</b>  | <b>AUDIO CONFIG MENU.....</b>                             | <b>87</b> |
| 9.1       | Setting the AES/EBU Output .....                          | 87        |
| 9.1.1     | Selecting the Frequency .....                             | 87        |
| 9.1.2     | Setting the Level .....                                   | 87        |
| 9.1.3     | Setting Clicks .....                                      | 88        |
| 9.1.4     | Settings Shared by Channels.....                          | 88        |
| 9.1.5     | Selecting the Resolution .....                            | 88        |
| 9.1.6     | Selecting the Pre-emphasis Mode .....                     | 89        |
| 9.1.7     | Turning Time Code Insertion On and Off.....               | 89        |
| 9.1.8     | Adjusting the Timing .....                                | 89        |
| 9.1.9     | Turning Lip Sync Interlock On and Off (SER02/SER04) ..... | 90        |
| 9.2       | Setting the Silence Output.....                           | 90        |
| 9.2.1     | Settings Shared with the AES/EBU Output .....             | 90        |
| 9.2.2     | Selecting the Resolution .....                            | 91        |
| 9.2.3     | Adjusting the Timing .....                                | 91        |
| 9.3       | Setting the Word-clock Output .....                       | 92        |
| 9.3.1     | Adjusting the Timing .....                                | 92        |
| <b>10</b> | <b>LTC CONFIG MENU .....</b>                              | <b>93</b> |
| 10.1      | Turning the LTC Output On and Off.....                    | 93        |
| 10.2      | Selecting the LTC Format .....                            | 93        |
| 10.3      | Adjusting the Timing (Frame) .....                        | 94        |
| 10.4      | Adjusting the Timing (Bit) .....                          | 94        |
| 10.5      | Adjusting the Offset.....                                 | 94        |
| 10.6      | Setting Dropped Frames.....                               | 95        |
| 10.7      | Settings Shared by LTC Outputs .....                      | 95        |

|          |  |     |
|----------|--|-----|
| 11       | CW/1PPS CONFIG MENU .....  | 96  |
| 11.1     | Switching the Output Signal.....                                       | 96  |
| 12       | SDI CONFIG MENU (SER02/SER04) .....                                    | 97  |
| 12.1     | Selecting the Frequency Group .....                                    | 98  |
| 12.2     | Setting the SDI Format.....  | 98  |
| 12.2.1   | Selecting the System .....   | 99  |
| 12.2.2   | Selecting the Color System .....                                       | 100 |
| 12.2.3   | Selecting the Frame Frequency .....                                    | 100 |
| 12.3     | Configuring Timing Data .....  | 101 |
| 12.3.1   | Selecting the Timing Reference .....                                   | 101 |
| 12.3.2   | Adjusting the Timing (Line) .....                                      | 101 |
| 12.3.3   | Adjusting the Timing (Dot) .....                                       | 102 |
| 12.4     | Configuring Fixed Patterns.....  | 102 |
| 12.5     | Configuring User Patterns.....   | 105 |
| 12.5.1   | Displaying a User Pattern .....  | 105 |
| 12.5.2   | Selecting and Transferring a User Pattern .....                        | 109 |
| 12.5.3   | Clearing a User Pattern .....  | 110 |
| 12.5.4   | Copying a User Pattern from a USB Memory Device to the Instrument..... | 111 |
| 12.5.5   | Copying a User Pattern from the Instrument to a USB Memory Device..... | 113 |
| 12.6     | Turning YCbCr/GBR On and Off .....                                     | 115 |
| 12.7     | Turning Safety Area Markers On and Off .....                           | 115 |
| 12.8     | Configuring the Pattern Scroll Feature.....                            | 116 |
| 12.8.1   | Turning Scrolling On and Off .....                                     | 116 |
| 12.8.2   | Setting the Scroll Speed (Vertical) .....                              | 116 |
| 12.8.3   | Setting the Scroll Speed (Horizontal).....                             | 117 |
| 12.9     | Setting the Pattern Change.....  | 117 |
| 12.9.1   | Turning Pattern Change On and Off .....                                | 117 |
| 12.9.2   | Setting the Change Interval .....                                      | 118 |
| 12.10    | Setting ID Characters .....  | 118 |
| 12.10.1  | Turning ID Characters On and Off.....                                  | 119 |
| 12.10.2  | Recalling ID Characters .....  | 119 |
| 12.10.3  | Creating ID Characters.....  | 119 |
| 12.10.4  | Setting the Position of ID Characters (Vertical).....                  | 120 |
| 12.10.5  | Setting the Position of ID Characters (Horizontal) .....               | 120 |
| 12.10.6  | Selecting the Size of ID Characters .....                              | 121 |
| 12.10.7  | Selecting the Level of ID Characters.....                              | 121 |
| 12.10.8  | Turning ID Character Blinking On and Off .....                         | 121 |
| 12.10.9  | Setting the ID Character On-Time.....                                  | 122 |
| 12.10.10 | Setting the ID Character Off-Time.....                                 | 122 |
| 12.10.11 | Turning ID Character Scrolling On and Off .....                        | 122 |
| 12.10.12 | Setting ID Character Scroll Speed .....                                | 123 |

# GENERAL SAFETY SUMMARY

## Read This before Using the Instrument

This instrument should only be used by persons with sufficient knowledge of electronics who thoroughly understand the contents of this manual.

This instrument is not designed or manufactured for households or ordinary consumers.

If unqualified personnel are to use the instrument, be sure the instrument is handled under the supervision of qualified personnel (those who have electrical knowledge). This is to prevent the possibility of personal injury or damage to the instrument.

## Note about Reading This Manual

The contents of this manual contain specialized terminology and may be difficult to understand. If you have any questions about the contents of this manual, please contact your local LEADER agent.

## Symbols and Terms

The following symbols and terms are used in this instruction manual and on the instrument to indicate important warnings and notes.

|   |  |
|---|--|
| <Symbol><br>       | This symbol appears in this instruction manual and on the instrument to indicate an area where improper handling could result in personal injury, damage to the instrument, or malfunction of the instrument or devices connected to it.<br>When you encounter this symbol on the instrument, be sure to refer to the information in this instruction manual that corresponds to the area that the symbol marks. |
| <Term><br> WARNING | Ignoring the precautions that this term indicates could lead to death or serious injury.   |
| <Term><br> CAUTION | Ignoring the precautions that this term indicates could lead to personal injury or damage to the instrument.   |

# GENERAL SAFETY SUMMARY

Read the warnings and information below thoroughly to avoid death, personal injury, fire, electric shock, and damage and deterioration of the instrument.

## Warnings Concerning the Case and Panels

- Do not remove the instrument's case or panels for any reason.
- Do not insert foreign materials, such as metal and flammable objects, or allow liquid to enter the instrument.
- Do not operate this instrument with wet hands.
- Do not install the instrument in a way that makes it difficult to operate the panel.

## Installation Environment

- Use this instrument within a temperature range of 0 to 40°C at a relative humidity of 85% or less; ensure that there is no risk of condensation forming.
- Do not use the instrument with its vents blocked or in a high temperature environment.
- If there is a possibility that the instrument has condensation within it, wait for approximately 30 minutes before turning on the power.
- Do not use this instrument in an environment where flammable gases, explosive gases, or steam is emitted or stored.

## If You Notice Something Wrong during Operation

- If you notice smoke, fire, strange odor, or any other anomaly while you are operating it, stop operation immediately, and remove the power cord plug from the outlet.

## Warnings Concerning the Power Source

- Do not use a power source with a voltage other than the rated line voltage for the instrument.
- Be sure to use a power frequency of 50 or 60 Hz.
- Use a power cord that meets the safety standards of the country that you are using it in.
- If the power cord is damaged, stop using it.
- Do not install the instrument in a way that makes it difficult to operate the power cord plug.
- When removing the power cord from the power outlet, be sure to hold the plug; do not pull on the cord.
- When using the instrument, make sure that it is grounded using a grounded power cord.

## Warnings Concerning the SFP Transceiver

- For safety reasons, use the Leader-designated SFP transceiver.
- The SFP transceiver is a Class 1 laser product. Ensure that laser light does not directly strike the eyes.
- Use of controls or adjustments or performance of procedures other than those specified in the instruction manual may result in hazardous radiation.

# GENERAL SAFETY SUMMARY

## Cautions Concerning the Input and Output Connectors

- Do not apply signals exceeding the specifications in this instruction manual to the input connectors.
- Do not short circuit or apply an external voltage to the output connectors.

## If You Will Not Use the Instrument for an Extended Period of Time

- If you will not use the instrument for an extended period of time, remove the power plug from the outlet.

## Cautions Concerning the Ethernet Port

- When you are connecting the instrument to the communication provider's equipment, connect to the Ethernet port through a hub that is authorized for use in the country that you are using the instrument in.

## Cautions Concerning the Installation of the Instrument

- Place it horizontally on a securely installed stand or shelf.
- Do not place heavy measuring instruments, etc. directly on top of this instrument.
- If you are mounting this instrument on a rack, be sure to provide additional support for the body of the instrument. If you use only the front panel to mount the instrument, the instrument case may deform or fall.
- This product is intended for use nonresidential areas only. Use in residential areas may cause electromagnetic interference.
- This product may not operate normally if exposed to strong electric fields, strong magnetic fields, or strong vibrations.

## Routine Maintenance

- When you clean the instrument, remove the power plug from the outlet.
- Do not use thinner or benzene when you clean the instrument's case, panels, or knobs. Doing so could lead to paint chipping or the corrosion of plastic components. To clean the case, panels, and knobs, use a soft cloth with mild detergent, and wipe gently.
- While cleaning, make sure that foreign materials, such as water and detergent, do not enter the instrument. If liquid or a metal object enters into the instrument, fire or electric shock may result.

## Compliance Information

---

UL

This product complies with UL standards.

UL file No. E525355

---

FCC

This product complies with Part 15 of the FCC standards.

---

CE

This product complies with CE standards.

EMC Directive: 2014/30/EU EN 61326-1:2013

LOW VOLTAGE Directive: 2014/35/EU EN 61010-1:2010+A1:2019

RoHS Directive: 2011/65/EU (EU)2015/863 EN IEC 63000:2018

---

UKCA

This product complies with UKCA standards.

---

WEEE

This product is subject to the WEEE Directive.

Follow the applicable regulations of your country or region when discarding this product. Follow the EU Battery Directive when discarding the batteries that you removed from this product.

(WEEE; Waste Electrical and Electronic Equipment)

---

KC

This product complies with KC standards.

**备注)**

○: 表示该有毒有害物质在该部件所有均质材料中的含量均在GB/T26572规定的限量要求以下。

×: 表示该有毒有害物质或元素至少在该部件的某一均质材料中的含量超出GB/T26572  
标准规定的限量要求。

Ver.3

- \* These declaration becomes invalid if technical or operational modifications are introduced without the manufacturer's consent.

# 1 INTRODUCTION

Thank you for using the LEADER instrument. To use this instrument safely, read this instruction manual thoroughly, and make sure that you know how to use the instrument properly.

If some point about the operation of this instrument is still unclear after you have read this instruction manual, refer to the contact information on the back cover of the manual to contact LEADER, or contact your local LEADER agent.

## 1.1 User Registration

Register as a user to access the latest product Information.

To register, go to the user registration page of the Leader website.

<https://www.leader.co.jp/en/member/registry/>

## 1.2 Scope of Warranty

This LEADER instrument has been manufactured under the strictest quality control guidelines. If a failure occurs when the instrument is used in normal conditions, we will repair the instrument free of charge for a period of one year from the date of purchase. The proof of purchase (delivery slip, receipt bill, etc.) may be used as a warranty. Keep it in a safe place.

LEADER shall not be obligated to furnish the following free services during the warranty period.

1. Repair of malfunction or damages resulting from fire, natural calamity, or improper voltage applied by the user.
2. Repair of a product that has been improperly repaired, adjusted, or modified by personnel other than a factory-trained LEADER representative.
3. Repair of malfunctions or damages resulting from improper use.
4. Repair of malfunctions caused by devices other than this instrument.
5. Repair of malfunctions or damages without the presentation of a proof of purchase or receipt bill for the instrument.

This Warranty is valid only in Japan.

## 1.3 Trademark Acknowledgments

The company and product names in this document are trademarks or registered trademarks of their respective holders.

## 1.4 Operating Precautions

### 1.4.1 Power Supply Voltage

**WARNING**

Confirm the voltage of the power source before you connect the power cord to it.

The power requirements of this instrument are indicated on its rear panel.

Only use a power source that supplies a voltage within the operating voltage range and has a frequency of 50/60 Hz.

The symbol "~~" on the back indicates alternating current (AC).

### 1.4.2 Maximum Allowable Input Voltage

**CAUTION**

The maximum signal voltage that can be applied to the input connectors is indicated below.

Do not apply excessive voltage to the connectors. Doing so may damage the device or lead to injury.

Table 1-1 | Maximum allowable input voltage

| Input Connector |         | Maximum Allowable Voltage        |
|-----------------|---------|----------------------------------|
| GENLOCK/CW IN   | GENLOCK | $\pm 5$ V (DC + peak AC)         |
|                 | CW      | 1 Vrms (50 $\Omega$ termination) |
| LTC/REMOTE      | LTC     | 4Vp-p                            |
|                 | REMOTE  | 5V                               |
| L-SYNC          |         | 3.3V                             |
| GNSS IN (SER01) |         | 3.3Vp-p                          |

### 1.4.3 Mechanical Shock

This instrument contains sensitive components, so it may be damaged if it is dropped or otherwise exposed to a strong shock.

### 1.4.4 Electrostatic Damage

Electronic components can be damaged by static discharge. Static electricity can build up in the core wire of a coaxial cable. Before connecting a coaxial cable to an I/O connector of the instrument, short the core wire of the cable with the external conductor.

### 1.4.5 Warming Up

To ensure more accurate measurements, turn ON the instrument approximately 30 minutes before you intend to use it to allow its internal temperature to stabilize.

## 2 PRODUCT CONFIGURATION

### 2.1 Main Unit

The configuration of the LT4670 instrument is as shown below.

Table 2-1 | Instrument

| Model Number | Model Name     | Functions                                 | Port         | Number of Ports |
|--------------|----------------|---|--------------|-----------------|
| LT4670       | SYNC GENERATOR | Genlock/CW Input                          | BNC          | 2               |
|              |                | Analog Black Output                       | BNC          | 6               |
|              |                | CW/1PPS Output                            | BNC          | 1               |
|              |                | Word-Clock Output                         | DIN 1.0/2.3  | 1               |
|              |                | Silence Output                            | DIN 1.0/2.3  | 1               |
|              |                | AES/EBU Output                            | DIN 1.0/2.3  | 1               |
|              |                | Ethernet                                  | RJ-45        | 1               |
|              |                | LTC/Remote                                | D-Sub 26pin  | 1               |
|              |                | Inter-instrument Synchronization (L-SYNC) | D-Sub 15pin  | 1               |
|              |                | Power Requirements                        | Power Supply | 1               |

### 2.2 Hardware Options

The following hardware options can be added to the LT4670.

Hardware options will be added by LEADER or the designated service personnel. Contact your local LEADER agent.

Table 2-2 | Hardware options

| Model Number      | Model Name         | Functions  | Port Added   | Number of Ports |
|-------------------|--------------------|--|--------------|-----------------|
| LT4670-SER01      | GNSS               | GPS / GLONASS / GALILEO / BDS / QZSS Synchronization | BNC          | 1               |
| LT4670-SER02 (*1) | SDI                | 3G-SDI / HD-SDI / SD-SDI Output                      | BNC          | 2               |
| LT4670-SER03      | PTP                | PTP  | SFP/SFP+     | 2               |
| LT4670-SER04 (*1) | 25G-IP/12G-SDI TSG | 25G-IP Output  | SFP+/SFP28   | 2               |
|                   |                    | 12G-SDI / 6G-SDI / 3G-SDI / HD-SDI / SD-SDI Output   | Micro-BNC    | 4               |
| LT4670-SER11      | POWER UNIT         | Redundant Power Supply                               | Power Supply | 1               |

\*1 The LT4670-SER02 and LT4670-SER04 cannot be installed in the instrument at the same time.

## 2.3 Software Options

The following software options can be added to the LT4670.

To add a software option, provide your local LEADER agent with the instrument's MAC address and serial number. We will issue a license key.

When you receive the license key, add it using "SYSTEM CONFIG > LICENSE INFO. > LICENSE KEY INPUT". Each instrument requires a unique license key. You cannot use the same key for multiple instruments.

Table 2-3 | Software options

| Model Number | Model Name      | Functions   |
|--------------|-----------------|---|
| LT4670-SER21 | 4K 3G-Quad Link | 4K 3G-Quad Link Output<br>(This requires two LT4670-SER02 units.) |

### MAC Address

You can check the MAC address in "STATUS > CONFIG > SYSTEM > MAC ADDRESS".

```
[ M A C   A D D R E S S ]      ◆  
0 0 : 0 0 : 0 0 : 0 0 : 0 0 : 0 0
```

### Serial Number

You can check the serial number on the rear panel or in "STATUS > CONFIG > SYSTEM > MAIN". The upper 7-digit number represents the serial number.

```
[ M A I N : 0 0 / 0 0 0 0 0 0 0 ]      ◆  
C 5 : 0 0 0 0 0 0 0 0   C 1 0 : 0 0 0 0 0 0 0 0
```

# 3 SPECIFICATIONS

## 3.1 General

The LT4670 is a 1U full-rack size sync signal generator that outputs analog video sync signals and audio word-clock signals. The genlock function allows operation synchronized with input signals.

The genlock function has a stay-in-sync function that maintains the phase when an error occurs in the input analog video sync signal. Adding the power option provides redundant operation.

The power supply unit and fan can be replaced without turning off the power of the LT4670 main unit. These features make it possible to configure a highly reliable system.

The LT4670 has six independent standard outputs of the analog sync signal output, digital audio output, word-clock output, and LTC I/O. Also, options are available for GNSS and PTP synchronization, arbitrary pattern output using 12G-SDI, 6G-SDI, 3G-SDI (4K Quad), HD-SDI, SD-SDI, and 25G-IP etc. These options are designed to enable the management of the optimal synchronization system for your application.

## 3.2 Features

### 3.2.1 LT4670

#### **Genlock Function**

---

Various output signals can be synchronized by applying NTSC/PAL black burst signals, which are analog video sync signals, and HDTV tri-level sync signals.

NTSC/PAL black burst signal with field reference pulse and NTSC black burst signal with 10 field IDs are also supported.

The 10 MHz CW lock is also supported as a standard feature.

#### **Stay-in-Sync and Slow Lock Functions**

---

A stay-in-sync function is available in case errors occur at the genlock input. In addition, a slow lock function is available to reduce the shock that occurs when genlock is performed again based on stay-in-sync. This makes it possible to construct an extremely reliable synchronization system.

#### **Analog Video Sync Signal Output**

---

Six analog video sync signals can be output. The phase of each output can be adjusted independently.

NTSC/PAL black burst signal with field reference pulse and NTSC black burst signal with 10 field IDs are also supported.

#### **Word-Clock Signal Output**

---

The LT4670 can output a 48 kHz word-clock signal synchronized with video signals.

### **AES/EBU Signal Output**

---

This option can output a 48 kHz AES/EBU signal synchronized with video signals. (AES/EBU connector)

It is also equipped with a AES/EBU signal output compatible with DARS. (SILENCE connector)

### **CW/1PPS Output**

---

The CW/1PPS output can output 10 MHz CW or 1PPS, whichever is selected.

### **Time Code I/O**

---

The time code generator can run in free run mode based on internal time information. Based on the NTP server, LTC, VITC, GNSS (SER01), or PTP (SER03) time information, it can embed the LTC3 system output and analog video sync signal output in VITC, as well as the SDI (SER02/SER04) output in ATC (LTC/VITC).

### **LTC I/O**

---

The LTC has three independent outputs for an input. An offset time can be set for each output with respect to the frame rate and reference time.

### **Remote Connector**

---

The remote connector can be used to load presets and transmit two alarm outputs.

### **Inter-instrument Synchronization Control (L-SYNC)**

---

In a redundant system, the time can be synchronized by connecting the main and backup devices that are synchronized with the same analog video sync signal via L-SYNC.

### **Real Time Clock**

---

The real time clock is backed up by a battery. There is no need to reset the clock even when the power is turned off and then back on.

### **Ethernet**

---

Control is exerted based on the SNMP. When an error is detected, a TRAP is issued. Also, this instrument can be controlled using the HTTP.

When connected to an NTP server as an NTP client, the instrument can be used for internal clock synchronization or as an NTP server.

### **Preset Memory Function**

---

Up to 10 presets can be saved. Convenient registered presets can be recalled during operation. The LT4670 can be started with the same settings every time.

### **External Memory Support**

---

The log can be saved and preset data can be written and saved from the panel using USB memory devices.

### **Logging Function**

---

The operation status can be logged to internal memory or external memory.

### **Last Memory Function**

---

When the power is turned on, it starts up with the settings when the power was turned off last time.

## 3.2.2 LT4670-SER01 (GNSS)

### **GNSS Sync**

---

A GNSS antenna can be connected to generate and output signals by locking to the frequency and clock obtained from the GPS, GLONASS, GALILEO, BDS, and QZSS.

It also features a stay in sync function, which retains the phase and frequency of the output signal when GNSS signals are lost.

## 3.2.3 LT4670-SER02 (SDI)

### **Triple-rate SDI Ready**

---

The SDI signal output supports 3G-SDI (level A and level B), HD-SDI, and SD-SDI. There are two independent SDI signal output connectors, and different patterns and phases can be set for each.

Also, two SER02 units can be mounted, and up to four independent SDI signals can be output. Moreover, adding a 4K option (SER21) supports the 4K 3G-Quad Link.

### **User Pattern Generation**

---

In addition to internal patterns such as the color bar, SD and HD (2K) user patterns can be output.

### **ID Character Overlay**

---

ID characters can be overlaid at any position on the display. In addition, ID characters can be scrolled horizontally or displayed in a blinking state for checking whether the display has frozen.

### **Logo Mark Overlay**

---

24-bit full-color bitmap data can be overlaid as a logo mark at any position on the display at a 640 (dots) × 480 (lines) VGA size.

### **Safety Area Markers**

---

90% and 80% safety area markers can be overlaid on the display. For 3G-SDI and HD-SDI, a 4:3 aspect marker can be overlaid.

### **Pattern Scrolling**

---

This option is equipped with a function for scrolling patterns in eight directions. The moving speed can be varied.

### **Moving Box**

---

A moving box can be overlaid on the display. Its color, size, and moving speed can be varied.

### **Circle**

---

90%, 80%, and 70% circles can be overlaid on the display. Their brightness can be changed, and they can be displayed in a blinking state.

### **Time Code**

---

A time code can be overlaid at any position on the display. Its character size and brightness can be changed.

### **Audio Embedding**

---

Embedded audio of 16 channels (four channel × four groups) can be embedded. The frequency, level, and the like can be set for each channel.

### **Lip Sync Pattern**

---

Lip sync patterns in which the video and audio are synchronized can be output. By using a waveform monitor that features a lip sync measurement function, such as the Leader's LV5600, it is possible to measure the offset between the video and audio in SDI signal transmissions.

## 3.2.4 LT4670-SER03 (PTP)

### **PTP Leader Function**

---

This option supports the Precision Time Protocol defined in IEEE1588-2008 and operates as a PTP grand master. SMPTE2059, AES67, and General profiles are supported. The PTP time source is obtained from the internal clock, NTP server, GNSS, VITC, or LTC.

### **PTP Follower Function**

---

When a host PTP grand master is present in the system, this option operates as a PTP follower and can operate as a PTP leader for lower devices.

### **Two Independent PTP Ports**

---

Since two PTP engines are mounted, a PTP system can be constructed for each of them as an independent grand master.

The two engines can be used as followers. (The leader can be selected automatically or arbitrarily by the user.)

It is also possible to use one engine as a follower and the other as the leader.

### **10GbE Support**

---

A 10GbE SFP+ module, sold separately, can be used.

### **Local PTP Function**

---

When genlocked to the analog video sync signal or HDTV tri-level sync signal, this function obtains time information from an external time source, such as a GNSS or NTP server. It can adjust the time according to the phase information of the genlocked sync signal and redistribute the PTP time.

#### 3.2.5 LT4670-SER04 (25G-IP)

This section describes the IP functions of the LT4670-SER04 (25G-IP/12G-SDI TSG).

### **IP Signal Generation**

---

IP test pattern signals can be generated.

The IP transmission standard is SMPTE ST 2110-20/30/31/40. This function can generate 2K and 4K video signal test patterns. ST-2022-6 is also supported.

For IP signals, up to four streams can be output per port within the band.

(IP test patterns specified with SDI outputs are output.)

### **Network Synchronization**

---

Video and audio test signals can be generated in sync with the PTP (Precision Time Protocol) of SMPTE ST 2059.

### **Packet Errors (future support)**

---

Packet loss and packet error test signals can be generated.

### **Packet Jitter (future support)**

---

Packet jitter can be added to test signals.

#### 3.2.6 LT4670-SER04 (12G-SDI)

This section describes the SDI functions of the LT4670-SER04 (25G-IP/12G-SDI TSG).

### **12G-SDI Ready**

---

The SDI signal output supports 12G-SDI, 6G-SDI, 3G-SDI (level A and level B), HD-SDI, and SD-SDI. There are four independent SDI signal output connectors, and different patterns and phases can be set for each.

### **4K Internal Pattern Generation**

---

In addition to the internal patterns of LT4670-SER04, the following patterns can be output.

- UHD Color Bar ARIB STD-B66-2
- HLG CB ITU-R BT.2111 HLG narrow range
- S-LOG3(Live HDR) Ver1.11 narrow range scale

### User Pattern Generation

---

In addition to internal patterns such as the color bar, SD, HD (2K), and 4K user patterns can be output.

### ID Character Overlay

---

ID characters can be overlaid at any position on the display. In addition, ID characters can be scrolled horizontally or displayed in a blinking state for checking whether the display has frozen.

### Logo Mark Overlay

---

24-bit full-color bitmap data can be overlaid as a logo mark at any position on the display at a 640 (dots) × 480 (lines) VGA size.

### Safety Area Markers

---

90% and 80% safety area markers can be overlaid on the display. For 12G-SDI, 6G-SDI, 3G-SDI, and HD-SDI, a 4:3 aspect marker can be overlaid.

### Pattern Scrolling

---

This option is equipped with a function for scrolling patterns in eight directions. The moving speed can be varied.

### Moving Box

---

A moving box can be overlaid on the display. Its color, size, and moving speed can be varied.

### Circle

---

90%, 80%, and 70% circles can be overlaid on the display. Their brightness can be changed, and they can be displayed in a blinking state.

### Time Code

---

A time code can be overlaid at any position on the display. Its character size and brightness can be changed.

### Audio Embedding

---

Embedded audio of 16 channels (four channel × four groups) can be embedded. The frequency, level, and the like can be set for each channel.

### Lip Sync Pattern

---

Lip sync patterns in which the video and audio are synchronized can be output. By using a waveform monitor that features a lip sync measurement function, such as the Leader's LV5600, it is possible to measure the offset between the video and audio in SDI signal transmissions.

### 3.2.7 LT4670-SER11 (POWER UNIT)

#### **Redundant Power Supply**

---

You can make the power supply redundant.

When errors occur in power supply units, alarms are indicated on the instrument panel. Errors can also be output as alarms using SNMP.

### 3.2.8 LT4670-SER21 (4K 3G-Quad Link)

#### **4K 3G-Quad Link Output**

---

Two LT4670-SER02 (SDI) options are featured. When this option is enabled, the 4K 3G-Quad Link can be output.

#### **4K Internal Pattern Generation**

---

In addition to the internal patterns of LT4670-SER02, the following patterns can be output.

- UHD Color Bar ARIB STD-B66-2
- HLG CB ITU-R BT.2111 HLG narrow range
- S-LOG3(Live HDR) Ver1.11 narrow range scale

#### **User Pattern Generation**

---

In addition to internal patterns such as the color bar, 4K user patterns can be output.

#### **ID Character Overlay**

---

ID characters can be overlaid at any position on the display. In addition, ID characters can be scrolled horizontally or displayed in a blinking state for checking whether the display has frozen.

#### **Logo Mark Overlay**

---

24-bit full-color bitmap data can be overlaid as a logo mark at any position on the display at a 640 (dots) × 480 (lines) VGA size.

#### **Safety Area Markers**

---

90% and 80% safety area markers can be overlaid on the display. A 4:3 aspect marker can also be overlaid.

#### **Pattern Scrolling**

---

This option is equipped with a function for scrolling patterns in eight directions. The moving speed can be varied.

### **Moving Box**

---

A moving box can be overlaid on the display. Its color, size, and moving speed can be varied.

### **Circle**

---

90%, 80%, and 70% circles can be overlaid on the display. Their brightness can be changed, and they can be displayed in a blinking state.

### **Time Code**

---

A time code can be overlaid at any position on the display. Its character size and brightness can be changed.

### **Audio Embedding**

---

Embedded audio of 16 channels (four channel × four groups) can be embedded. The frequency, level, and the like can be set for each channel.

### **Lip Sync Pattern**

---

Lip sync patterns in which the video and audio are synchronized can be output. By using a waveform monitor that features a lip sync measurement function, such as the Leader's LV5600, it is possible to measure the offset between the video and audio in SDI signal transmissions.

### 3.3 Standards

#### 3.3.1 LT4670

##### **General Specifications**

---

|                          |   |

|                          |   |
|--------------------------|---|
| Analog Video Sync Signal |   |
| NTSC Black Burst Signal  | SMPTE ST 170, SMPTE ST 318, SMPTE RP 154        |
| PAL Black Burst Signal   | ITU-R BT 1700, EBU N14                          |
| HD Tri-level Sync Signal | SMPTE ST 240, SMPTE ST 274, SMPTE ST 296        |
| AES/EBU Signal           | ANSI S4.40, AES3-2009, AES11-2009, SMPTE ST 276 |
| LTC Signal               | SMPTE 12M-1                                     |
| Phase Management         | SMPTE ST 2059-1                                 |

**I/O Connectors**

---

|                                  |   |
|----------------------------------|---|
| Genlock Input Connector          |   |
| Connector                        | 2 BNC connectors  |
| Input Signal                     | Analog composite sync signal  |
| HD Tri-level Sync Signal         | Analog composite sync signal  |
| Format                           | Loop-through  |
| Input Impedance                  | 47 kΩ   |
| Maximum Input Voltage            | ±5 V (DC + peak AC)   |
| Operating Input Level Range      | ±6 dB   |
| External Lock Range              | ±5 ppm  |
| Jitter                           | 1 ns (when genlock is in use)   |
| 10 MHz CW Input Connector        |   |
| Connector                        | 1 BNC connector (used in combination with the genlock input connector)                  |
| Input Impedance                  | 47 kΩ (used with 50 Ω terminated to the loop-through)                                   |
| Input Signal Level               | 0.5 - 1 Vrms (50 Ω termination)   |
| Input Signal Frequency           | 10 MHz  |
| Locking Frequency Range          | ±5 ppm  |
| 10 MHz CW/1PPS Output Connectors |   |
| Connector                        | 1 BNC connector (used in combination with 10 MHz CW and 1PPS)                           |
| Output Amplitude Signal Level    |   |
| 10 MHz CW                        | 2 Vp-p ± 20% (1 Vrms) for square waves; 50 Ω termination                                |
| 1PPS                             | 4.8 ± 0.5 V (no termination, high level)<br>2.4 ± 0.25 V (50 Ω termination, high level) |
| Output Impedance                 | 50 Ω unbalanced   |
| Output Signal Frequency          | 10 MHz/1PPS   |

### 3 SPECIFICATIONS

#### LTC I/O Connector

|                     |                                       |
|---------------------|---------------------------------------|
| Connector           | D-sub 26-pin (female)                 |
| LTC                 |                                       |
| Number of Inputs    | 1                                     |
| Input Impedance     | 1 kΩ (balanced)<br>500 Ω (unbalanced) |
| Input Signal Level  | 0.5 - 4 Vp-p                          |
| Number of Outputs   | 3                                     |
| Output Impedance    | 24 Ω balanced                         |
| Output Signal Level | 2 Vp-p ± 10%                          |

#### Analog Video Sync Signal Output Connector

|                  |   |
|------------------|---|
| Connector        | 6 BNC connectors, 6 outputs   |
| Output Signal    | NTSC black burst signal, PAL black burst signal, HD tri-level sync signal |
| Output Impedance | 75 Ω  |
| Sync Level       |   |
| NTSC             | 40±1IRE   |
| PAL              | -300±6mV  |
| HD               | ±300±6mV  |
| Blanking         | 0 ± 15 mV   |

#### AES/EBU Digital Audio Output Connector

|                  |                         |
|------------------|-------------------------|
| Connector        | 1 DIN 1.0/2.3 connector |
| Output Amplitude | 1 Vp-p ± 0.1 V          |
| Output Impedance | 75 Ω unbalanced         |

#### AES/EBU Silence Output Connector

|                  |                         |
|------------------|-------------------------|
| Connector        | 1 DIN 1.0/2.3 connector |
| Output Amplitude | 1 Vp-p ± 0.1 V          |
| Output Impedance | 75 Ω unbalanced         |

#### Word-Clock Output Connector

|                  |  |
|------------------|--|
| Connector        | 1 DIN 1.0/2.3 connector  |
| Output Frequency | 48 kHz   |
| Output Amplitude | 5.0 ± 0.4 V (no termination, high level)<br>2.5 ± 0.2 V (75 Ω termination, high level) |

### Control Connectors

---

|                                     |  |
|-------------------------------------|--|
| Ethernet Port                       |  |
| Standard                            | IEEE 802.3   |
| Protocol                            |  |
| SNMP v2c/v3                         | Command control, status query, trap transmission   |
| HTTP                                | Monitoring and operation using a browser   |
| NTP                                 | Internal clock synchronization, time distribution  |
| Connector                           | RJ-45  |
| Type                                | 10BASE-T, 100BASE-TX, 1000BASE-T (auto switching)  |
| USB Port                            |  |
| Standard                            | USB 2.0  |
| Supported Media                     | USB memory device  |
| Supported Format                    | FAT32  |
| Functions                           | Preset, logo, ID character, and user pattern loading; preset and log saving; MIB file retrieval; firmware update       |
| Connector                           | USB Type A   |
| Remote Connector                    |  |
| Connector Shape                     | D-sub 26-pin (female)  |
| Locking Screw                       | Inch screw (No.4-40UNC)  |
| Number of Ports                     | 1  |
| Control Signal                      |  |
| Preset Recall                       | LV-TTL level (low active)  |
| Alarm Output                        | HC-CMOS level  |
| Input Voltage Range (Preset Recall) | 0 - 5 VDC<br>All inputs are pulled up to +3.3 V (control is also possible using +5 V).                                 |
| Output Voltage Range (Alarm Output) | 0 - 5 VDC  |
| Functions                           | Preset recall<br>Alarm output (when an error occurs, when the fan malfunctions, or when the power supply malfunctions) |

### 3 SPECIFICATIONS

#### Inter-instrument Synchronization Connector (L-SYNC)

|                     |   |
|---------------------|---|
| Connector Shape     | D-sub 15-pin (female)   |
| Number of Ports     | 1   |
| Control Signal      | LV-CMOS   |
|                     | 6 main-side outputs   |
|                     | 6 backup-side inputs  |
| Input Voltage Range | 0 - 3.3 VDC   |
| Function            | The time of the two instruments is synchronized in a redundant configuration. |

\* It is not supported when the reference signal format is 23.98 Hz.

#### LCD

|                      |                         |
|----------------------|-------------------------|
| Number of Characters | 24 characters × 2 lines |
| Backlight            | On/off                  |

#### Genlock Function

|                           |  |
|---------------------------|--|
| Signal Format             | NTSC BB, NTSC BB+REF, NTSC BB+ID, NTSC BB+REF+ID, PAL BB, PAL BB+REF, 525/59.94I, 525/59.94P, 625/50I, 625/50P, 1125/60P, 1125/59.94P, 1125/50P, 1125/60I, 1125/59.94I, 1125/50I, 1125/30P, 1125/29.97P, 1125/25P, 1125/24P, 1125/23.98P, 1125/24PsF, 1125/23.98PsF, 750/60P, 750/59.94P, 750/50P, 750/30P, 750/29.97P, 750/25P, 750/24P, 750/23.98P |
| Timing Adjustment         |  |
| Adjustment Range          |  |
| FINE                      | ±100 (in units of 0.5 ns)  |
| Reference Source          |  |
| Internal Reference Signal | INTERNAL   |
| External Reference Signal | GENLOCK FMT-AUTO / GENLOCK FMT-MANUAL / 10MHz CW / GNSS (SER01) / PTP (SER03)  |
| Recovery Mode             |  |
| AUTO                      | Resynchronizes according to the auto setting when the external reference signal recovers.  |
| MANUAL                    | Retains the STAY IN SYNC state when the external sync signal recovers.   |
| Auto Setting              |  |
| IMMEDIATE                 | Resets the lock when the external sync signal recovers.  |
| FAST                      | Quickly resynchronizes when the external sync signal recovers.   |
| SLOW                      | Slowly resynchronizes when the external sync signal recovers.  |

|                       |  |
|-----------------------|--|
| Manual Setting        |  |
| IMMEDIATE             | Resets the lock when the external sync signal recovers and REFERENCE READJUST operation is performed.  |
| FAST                  | Quickly resynchronizes when the external sync signal recovers and REFERENCE READJUST operation is performed.   |
| SLOW                  | Slowly resynchronizes when the external sync signal recovers and REFERENCE READJUST operation is performed.  |
| REFERENCE READJUST    | Resynchronizes immediately.  |
| Stay in Sync Function | Retains the frequency (video phase) immediately before error occurrence when an error occurs in the external reference signal.<br>Retains the previous frequency if the 10 MHz CW signal is interrupted when 10 MHz CW is input. |

#### **Analog Video Sync Signal Output**

| HD Tri-Level Sync Signal    | 1 frame (entire frame)   |
| Adjustment Unit             |  |
| NTSC/PAL Black Burst Signal | In units of 0.0185 µs (54 MHz clock)   |
| HD Tri-Level Sync Signal    | In units of 0.0135 µs (74.25/1.001 MHz clock unit or<br>74.25 MHz clock unit)  |

### AES/EBU Digital Audio Output

---

#### Timing Adjustment

|                         |   |
|-------------------------|---|
| Adjustment Range        | ±1 AES/EBU frame ( $\pm 511$ )                  |
| Adjustment Unit         | In units of 512 fs (24.576 MHz)                 |
| Sampling Frequency      | 48 kHz sampling (synced with the video signal)  |
| Resolution              | 20 bits, 24 bits                                |
| Pre-emphasis            | OFF, 50/15, CCITT (only the CS bit is switched) |
| Frequency               | SILENCE, 400 Hz, 800 Hz, 1 kHz                  |
| Level                   | -60 – 0 dBFS (in units of 1 dBFS)               |
| Audio Click             | OFF, 1, 2, 4 sec                                |
| Lip Sync                | Synchronization with SDI-1                      |
| Sampling Clock Accuracy | Grade 2 ( $\pm 10$ ppm)                         |

\* The frequency, level, and audio click can be set for each channel.

### AES/EBU Silence Output

---

#### Timing Adjustment

|                         |  |
|-------------------------|--|
| Adjustment Range        | ±1 AES/EBU frame ( $\pm 511$ )                 |
| Adjustment Unit         | In units of 512 fs (24.576 MHz)                |
| Sampling Frequency      | 48 kHz sampling (synced with the video signal) |
| Resolution              | 20 bits, 24 bits                               |
| Pre-emphasis            | OFF  |
| Frequency               | SILENCE  |
| Level                   | MUTE   |
| Sampling Clock Accuracy | Grade 2 ( $\pm 10$ ppm)                        |

\* Supports DARS.

\* When EQUAL TO AES/EBU is set to on, the same signal as the AES/EBU digital audio signal is output.

### Word-Clock Output

---

#### Timing Adjustment

|                  |                                 |
|------------------|---------------------------------|
| Adjustment Range | ±1 AES/EBU frame ( $\pm 511$ )  |
| Adjustment Unit  | In units of 512 fs (24.576 MHz) |

### Time Code Function

---

|                        |  |
|------------------------|--|
| Reference Time         | Internal / NTP / LTC / VITC / GNSS (SER01) / PTP (SER03) |
| Frame Rate             | 30 / 29.97 / 25 / 24 / 23.98 Hz                          |
| Dropped Frame Mode     | On/Off   |
| JAM SYNC               |  |
| Application Setting    | Set the application time with a timer.                   |
| ATC Setting            |  |
| LTC Insertion Setting  | On/Off   |
| VITC Insertion Setting | On/Off   |

|                        |  |
|------------------------|--|
| Black Setting          |  |
| VITC Insertion Setting | On/Off   |
| Superimposed Line      |  |
| NTSC                   | 10 - 20 (*1)   |
| PAL                    | 6 - 22 (*2)  |
| AES/EBU Setting        |  |
| Insertion Setting      | On/Off   |
| LTC Setting            |  |
| Output Setting         | On/Off   |
| Leap Second            |  |
| Application Setting    | Set the application date/time with a timer.<br>(The PTP (SER03) does not support timer setting.) |
| Daylight Savings Time  |  |
| Application Setting    | Set the application date and time with a timer.  |

\*1 When REF is included in the black format, it cannot be superimposed on the 10th line.  
When ID is included in the black format, it cannot be superimposed on the 15th line.

\*2 When the black format is PAL BB+REF, it cannot be superimposed on the 7th line.

#### **Preset Function**

---

|                   |  |
|-------------------|--|
| Preset            | Saves the panel settings.  |
| Number of Presets | 10   |
| Recall Method     | Panel, remote connector, SNMP, browser   |
| Copy Method       | Copy from this instrument to a USB memory device or<br>copy from the USB memory device to this instrument. |

\* Logo data and device-specific information (IP address, time, etc.) cannot be saved.

#### **Logging Feature**

---

|                |  |
|----------------|--|
| Saved Items    | Genlock status change, instrument operation, alarm<br>information, attention information |
| Number of Logs | Up to 1000   |
| Copy Method    | Copy from this instrument to a USB memory device.  |
| Display        | Panel, browser   |

## 3.3.2 LT4670-SER01 (GNSS)

**I/O Connectors**

---

## GNSS Input Connectors

|                               |  |
|-------------------------------|--|
| Connector                     | 1 BNC connectors                                     |
| Input Impedance               | 50 Ω   |
| Antenna, Pre-amp Power Supply |  |
| Voltage                       | 5 V / 3.3 V / OFF                                    |
| Current                       | 50 mA max. (built-in overcurrent protection circuit) |

**GNSS Lock**

---

## GNSS Receiver

## Receive Frequency

|                       |  |
|-----------------------|--|
| GPS                   | 1575.42MHz (L1)  |
| GLONASS               | 1602 MHz + k×562.5kHz (L1OF)<br>(k = -7,⋯,5,6)   |
| GALILEO               | 1575.42MHz (E1-B/C)  |
| BDS                   | 1561.098MHz (B1)   |
| GPS+QZSS              | 1575.42MHz (L1)  |
| Status                | GNSS No Fix, ADJUST FREQ TO GNSS, ADJUST PHASE<br>TO GNSS, TRACKING, LOCK, STAY, RECOVERY                              |
| Stay in Sync Function | Retains the previous frequency and phase when the<br>GPS, GLONASS, GALILEO, BDS, or GPS+QZSS signal is<br>interrupted. |

### 3.3.3 LT4670-SER02/SER04/SER21 (SDI)

This section describes the following options:

- LT4670-SER02 (SDI)
- SDI functions of the LT4670-SER04 (25G-IP/12G-SDI TSG)
- LT4670-SER21 (4K 3G-Quad Link)

Depending on the option added to the instrument, the supported SDI format differs as follows. See the items appropriate to the respective options.

Table 3-1 | SDI format

| Option          | 2K     |        |        | 4K           |        |         |
|-----------------|--------|--------|--------|--------------|--------|---------|
|                 | SD-SDI | HD-SDI | 3G-SDI | 3G-Quad Link | 6G-SDI | 12G-SDI |
| SER02           | ●      | ●      | ●      | -            | -      | -       |
| SER02×2 + SER21 | ●      | ●      | ●      | ●            | -      | -       |
| SER04           | ●      | ●      | ●      | ●            | ●      | ●       |

#### I/O Connectors

##### SDI Output Connector

|       |                        |
|-------|------------------------|
| SER02 | 2 BNC connectors       |
| SER04 | 4 Micro-BNC connectors |

##### Output Impedance

75 Ω

##### Output Amplitude

800 mVp-p ± 10%

##### Output Return Loss

|                      |               |
|----------------------|---------------|
| 5 MHz – 1.485 GHz    | 15 dB or more |
| 1.485 GHz – 2.97 GHz | 10 dB or more |
| 2.97GHz - 6GHz       | 7 dB or more  |
| 6GHz - 12GHz         | 4 dB or more  |

##### Overshoot

Less than 10%

##### Rise and Fall Times

|     |   |
|-----|---|
| 12G | 45 ps or less (20 – 80%)                  |
| 6G  | 48 ps or less (20 – 80%)                  |
| 3G  | 135 ps or less (20 – 80%)                 |
| HD  | 270 ps or less (20 – 80%)                 |
| SD  | 0.4 ns or more, 1.5 ns or less (20 – 80%) |

##### DC Offset

0 ± 0.5 V

\* For SER04, the value when the following Micro-BNC-BNC conversion cable is used is indicated.

|               |                           |
|---------------|---------------------------|
| Product Name: | Micro BNC Cable           |
| Model:        | DM2.5HWS002EA-BJ          |
| Length:       | 200 mm                    |
| Manufacturer: | Canare Electric Co., Ltd. |

**SDI Video Output**

---

|                                |  |
|--------------------------------|--|
| SDI Signal                     |  |
| Bit Rate                       |  |
| 12G                            | 11.880Gbps, 11.880/1.001Gbps   |
| 6G                             | 5.940Gbps, 5.940/1.001Gbps   |
| 3G                             | 2.970Gbps, 2.970/1.001Gbps   |
| HD                             | 1.485Gbps, 1.485/1.001Gbps   |
| SD                             | 270Mbps  |
| Timing Adjustment              |  |
| Adjustment Range               | Entire frame   |
| Adjustment Unit                |  |
| V                              | Lines  |
| H                              | Clocks (148.5 MHz, 148.5/1.001 MHz, 74.25 MHz, 74.25/1.001 MHz, 27 MHz)  |
| Selecting the Timing Reference | SD, HD, 6G, and 12G only; SERIAL only for 3G   |
| SERIAL                         | Signals are output at the timing defined in the signal standard.   |
| LEGACY                         | Signals are output at the same timing as Leader's conventional signal generators.  |
| Test Patterns                  |  |
| 12G, 6G, 3G, HD                | 100% color bar, 75% color bar, multiformat color bar (ARIB STD-B28, pattern 2 area can be set to 100% white, 75% white, or +I), check field, flat field white 100%, white 50%, black 0%, red 100%, green 100%, blue 100% |
| SD                             |  |
| 525/ 59.94I                    | 100% color bar, 75% color bar, SMPTE color bar, check field, flat field white 100%, white 50%, black 0%, red 100%, green 100%, blue 100%   |
| 625/50I                        | EBU color bar, BBC color bar, check field, flat field white 100%, white 50%, black 0%, red 100%, green 100%, blue 100%   |
| 4K Additional Test Patterns    |  |
| UHDColorBar                    | ARIB STD-B66-2 UHDTV MULTIFORMAT COLOR BAR   |
| HLGCB                          | ARIB STD-B72 Color Bar Test Pattern for HLG HDR-TV System  |
| Slog3_LiveHDR_narrow_V11       | Recommendation ITU-R BT.2111 HLG<br>S-Log3 (Live HDR) Ver.1.11 narrow range scale  |
| User Pattern Display           | Select one from INT1 to INT4 for SD, HD, and 4K, respectively.   |
| File Format                    | 24-bit full color bitmap format (.bmp)<br>24/48-bit TIFF format (.tif) uncompressed only   |

### 3 SPECIFICATIONS

|                      |  |
|----------------------|--|
| Automatic Switching  | Automatically switches between selectable color bar patterns.    |
| Switch Time          | 1 – 255 sec  |
| Pattern Scrolling    |  |
| Direction            | Eight directions (up, down, left, right, and their combinations) |
| Speed Range and Unit |  |
| Interlace            | In unit of fields  |
| V                    | ±256 lines (in 1-line steps)                                     |
| H                    | ±256 dots (in 2-dot steps)                                       |
| Progressive          | In unit of frames  |
| V                    | ±256 lines (in 1- or 2-line steps)                               |
| H                    | ±256 dots (in 2- or 4-dot steps)                                 |

\* Not available when the check field pattern is selected.

|                     |  |

| Speed Range and Unit              |  |
| Interlace                         | In unit of fields                            |
| V                                 | ±256 dots (in 2-dot steps)                   |
| Progressive                       | In unit of frames                            |
| V                                 | ±256 dots (in 2- or 4-dot steps)             |

\* Not available when the check field pattern is selected.

\*1 The blinking display and scrolling can be set simultaneously.

**Logo Mark**

|  |  |
|--|--|
| Logo Mark Data   | 24-bit full-color data   |
| Maximum Size   | 640 (dots) × 480 (lines) (VGA size)                              |
| Number of Logo Marks That Can Be Saved in the Instrument | Up to 4 types  |
| Display Position   | Anywhere on the display  |
| Display Position Adjustment Range                        |  |
| V  | 0 - 100% (in units of 1%)  |
| H  | 0 - 100% (in units of 1%)  |
| File Format  | 24-bit full color bitmap format (.bmp)                           |
| Logo Mark Data Transfer                                  | The data is transfer from a USB memory device to the instrument. |

\* Not available when the check field pattern is selected.

**Component On/Off**

|          |  |
|----------|--|
| Function | Each of the Y/G, Cb/B, and Cr/R components can be turned on and off independently. |
|----------|--|

\* Not available when the check field pattern is selected.

**Moving Box**

|                   |   |
|-------------------|---|
| Box Color         | White, yellow, cyan, green, blue, red, magenta, black |
| Speed Setting V/H | LOW / MIDDLE / HIGH                                   |
| Size Setting V/H  | SIZE 1 - 5  |

\* Not available when the check field pattern is selected.

**Circle**

|                  |                                    |
|------------------|------------------------------------|
| Display Position | 90%, 80%, or 70% of the resolution |
| Brightness       | 100% / 75%                         |
| Blinking Display | On/Off                             |
| On Time          | 1 - 9 sec (in units of 1 sec)      |
| Off Time         | 1 - 9 sec (in units of 1 sec)      |

\* Not available when the check field pattern is selected.

**Time Code**

|                                   |   |
|-----------------------------------|---|
| Size                              | 32 × 32, 64 × 64, 128 × 128, 256 × 256 dots |
| Brightness                        | 100%, 75% (black only for the background)   |
| Display Position                  | Anywhere on the display                     |
| Display Position Adjustment Range |   |
| V                                 | 0 - 100% (in units of 1%)                   |
| H                                 | 0 - 100% (in units of 1%)                   |

\* Not available when the check field pattern is selected.

|  |   |
|--|---|
| Image Overlay  | Test pattern < Circle < Moving box < Safety area marker < Logo mark < ID character < Time code (The display order cannot be changed.) |
| Display Priority   |   |
| Simultaneous Display   | The test pattern, circle, moving box, safety area marker, logo mark, ID character, and time code can be displayed simultaneously.     |
| Embedded Audio   |   |
| Embedded Channels  | Can be turned on and off at the group level.<br>16 channels (4 channels × 4 groups)   |
| Sampling Frequency   | 48 kHz sampling (synced with the video signal)  |
| Resolution   | 20 bits, 24 bits  |
| Pre-emphasis   | OFF, 50/15, CCITT (only the CS bit is switched)   |
| Frequency  | SILENCE, 400 Hz, 800 Hz, 1 kHz  |
| Level  | -60 – 0 dBFS (in units of 1 dBFS)   |
| Audio Click  | OFF, 1 sec, 2 sec, 4 sec  |
| <ul style="list-style-type: none"> <li>* Audio (including packets) cannot be embedded when the check field pattern is selected.</li> <li>* The frequency, level, and audio click can be set for each channel.</li> <li>* The audio click and digital audio are asynchronous.</li> <li>* Not available when lip sync is enabled.</li> <li>* The following limitations apply for SD (525/59.94I). <ul style="list-style-type: none"> <li>• For 16 channel output, the resolution is set to 20 bits.</li> <li>• Up to three groups (12 channels) can be output at 24-bit resolution.</li> </ul> </li> </ul> |   |

### Lip Sync Pattern

---

|         |   |
|---------|---|
| Setting | On/Off  |
| *       | AES/EBU is synchronized with SDI1.  |
| *       | Not available when the check field pattern is selected.   |
| *       | Safety area markers, ID characters, logo marks, moving boxes, circles, and time codes cannot be overlaid. |
| *       | The audio click of embedded audio is disabled, and audio synchronized to the lip sync pattern is output.  |

### 3.3.4 LT4670-SER03 (PTP)

#### Corresponding Standard

---

|                           |                                 |
|---------------------------|---------------------------------|
| Internet Protocol Version | IPv4                            |
| PTP Standard              | IEEE 1588 – 2008                |
| Supported Profile         | SMPTE ST 2059 / AES67 / General |

## I/O Connectors

---

|                             |                           |
|-----------------------------|---------------------------|
| SFP/SPF+ connector          |                           |
| Number of Ports             | 2                         |
| Port Type                   | SFP gauge                 |
| Compliant Standard          | MSA                       |
| Supported Modules and Types |                           |
| SFP Transceiver RJ-45       | 1000Base-T                |
| SFP + Optical Transceiver   | 10GBase-SR and 10GBase-SW |

\* The SFP/SFP+ module is optional.

## Leader Function

# 4 PANEL DESCRIPTION

## 4.1 Front Panel

An overall and enlarged view of the front panel is shown below.

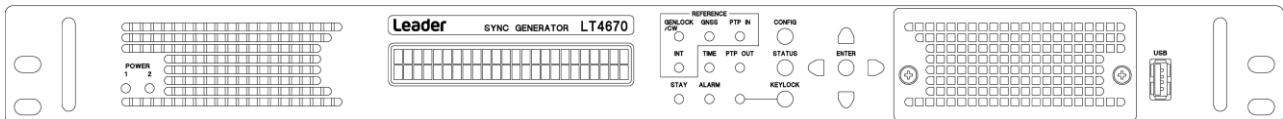

Figure 4-1 | Front panel (overall view)

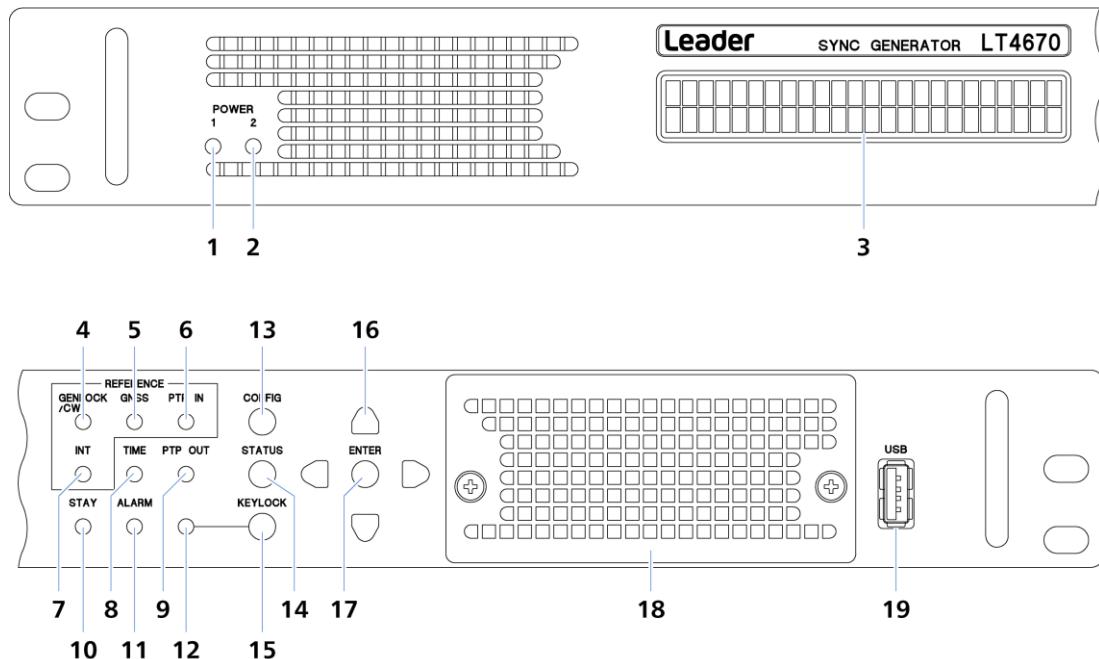

Figure 4-2 | Front panel (enlarged view)

### 1 POWER 1

Lights in green when POWER1 is on.

Lights red in the following cases.

- When an error occurs in the POWER1 fan
- When the power supply is redundant and an error occurs on POWER1
- When the power supply is redundant and POWER1 is off

[See also] "5.2 Turning the Power On"

### 2 POWER 2 (SER11)

Lights in green when POWER2 is on.

Lights red in the following cases.

- When an error occurs in the POWER2 fan
- When the power supply is redundant and an error occurs on POWER2
- When the power supply is redundant and POWER2 is off

[See also] "5.2 Turning the Power On"

**3 LCD panel**

Displays various information.

**4 GENLOCK/CW**

Lights in green when the reference signal is locked in GENLOCK or CW.

Flashes in orange until locked, lights in orange during stay in sync.

[See also] "6.2.2 Genlock Mode" "6.2.3 CW Mode"

**5 GNSS (SER01)**

Lights in green when the reference signal is locked in GNSS.

Flashes in orange until locked, lights in orange during stay in sync.

[See also] "6.2.4 GNSS mode (SER01)"

**6 PTP IN (SER03)**

Lights in green when the reference signal is locked in PTP.

Flashes in orange until locked, lights in orange during stay in sync.

[See also] "6.2.5 PTP mode (SER03)"

**7 INT**

Lights in green when the reference signal is INTERNAL.

[See also] "6.2.1 Internal Mode"

**8 TIME**

Lights in green when the time is successfully acquired from the selected TIME SOURCE.

Lights in orange when the time has not been obtained or when the TIME SOURCE has been changed.

When TIME SOURCE is LTC (ST309), VITC (ST309), NTP, or PTP, it flashes in orange if the time regularly obtained from TIME SOURCE and the internal time differ by more than the value set in TIMELAG SEC.

[See also] "7.7 Selecting the Time Source"

**9 PTP OUT**

Lights in green when the PTP output is operating normally.

[See also] "6.3.5 PTP Signal Output (SER03)"

**10 STAY**

Lights in orange when in stay-in-sync mode.

[See also] "6.2 Signal Input (Genlock Operation)"

**11 ALARM**

Lights in red when an alarm occurs.

[See also] "6.5 Alarm Display"

**12 KEYLOCK**

Lights in green when the key lock is enabled.

[See also] "6.1.2 Enabling the Key Lock"

**13 CONFIG**

The CONFIG menu is displayed.

Switches the top menu or returns to the higher level menu. It also cancels the settings.

[See also] "6.1.3 Menu Operations"

**14 STATUS**

The STATUS menu is displayed.

Switches the top menu or returns to the higher level menu.

[See also] "6.1.3 Menu Operations" "16 STATUS MENU"

**15 KEYLOCK**

Holding the key locks the keys or releases the key lock.

[See also] "6.1.2 Enabling the Key Lock"

**16 Arrow keys**

Used to move the cursor and to set values.

[See also] "6.1.3 Menu Operations"

**17 ENTER**

Confirms values and enters a lower level menu.

[See also] "6.1.3 Menu Operations"

**18 Fan (LP2184)**

Cooling fan for the instrument. It needs to be replaced periodically.

[See also] "19.2.2 Front Fan Unit Replacement"

**19 USB**

USB port. Used to save and load various data.

[See also] "6.1.1 Connecting a USB Memory Device"

## 4 PANEL DESCRIPTION

### 4.2 Rear Panel

An overall and enlarged view of the rear panel is shown below.

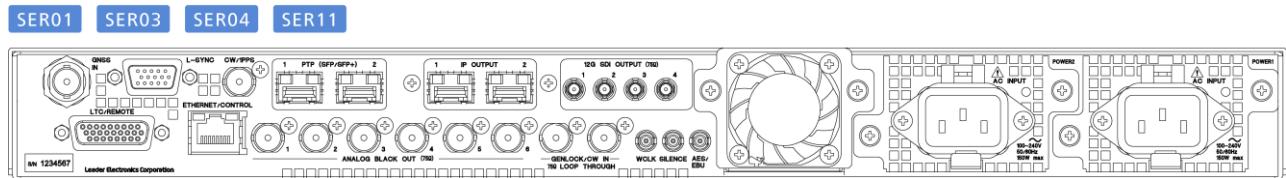

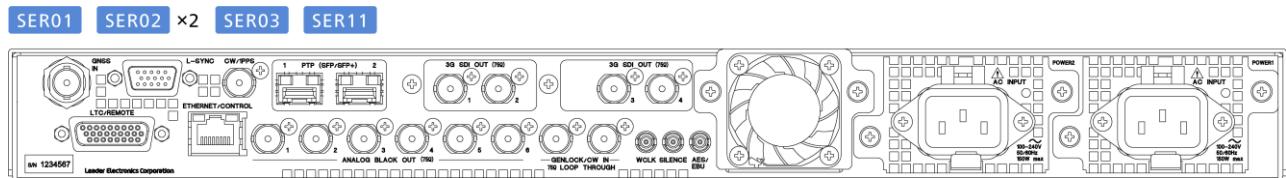

Figure 4-3 | Rear panel (overall view)

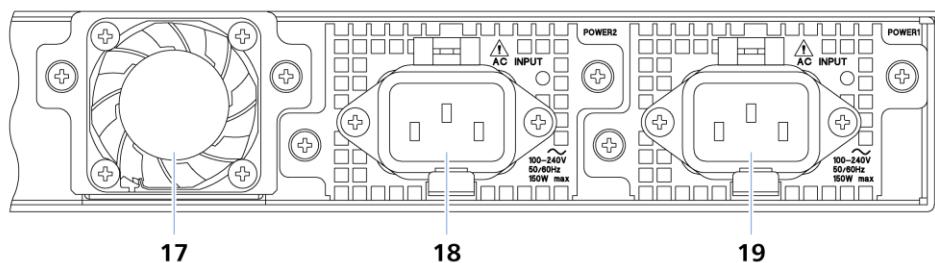

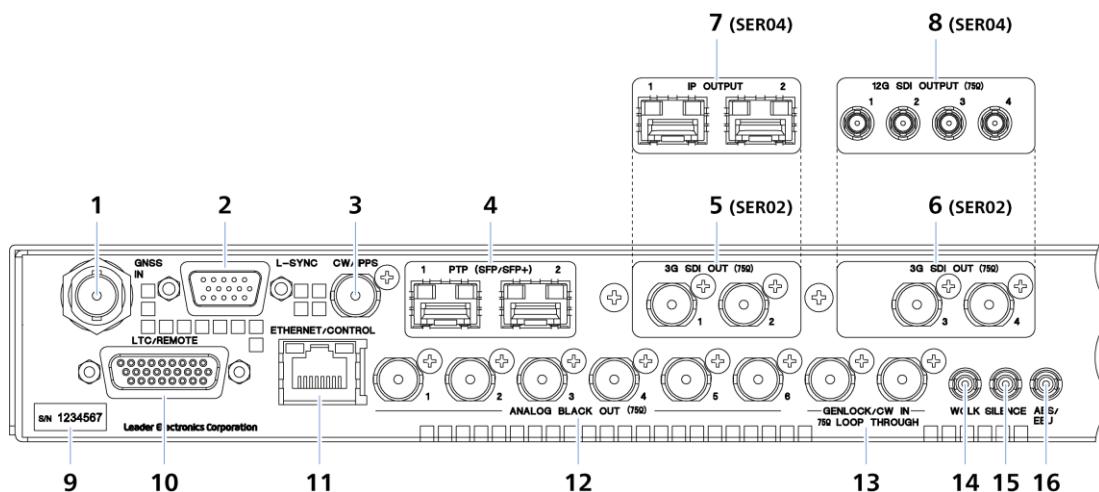

Figure 4-4 | Rear panel (enlarged view)

**1 GNSS IN (SER01)**

Optional GNSS input connector. It supports GPS, GLONASS, GALILEO, BDS, and QZSS.  
A separately sold GNSS antenna is available.

[See also] "6.2.4 GNSS mode (SER01)" "15.5 Setting the GNSS (SER01)"

**2 L-SYNC**

Control port for synchronizing the time of two LT4670 units.  
A separately sold L-SYNC cable (LC2186) is available.  
[See also] "6.6 L-SYNC"

**3 CW/1PPS**

10 MHz CW or 1PPS output connector.  
[See also] "6.3.3 CW/1PPS Signal Output" "11 CW/1PPS CONFIG MENU"

**4 SFP/SFP+ 1, 2 (SER03)**

Optional SFP/SFP+ port.  
To use this port, insert one of the following SFP modules sold separately.

- SFP RJ-45 (LC2141/LC2142)
- SFP+ MULTI-MODE (LC2148)
- SFP+ SINGLE-MODE (LC2149)

[See also] "6.2.5 PTP mode (SER03)" "13 PTP CONFIG MENU (SER03)" "15.6 Configuring the PTP Settings (SER03)"

**5 3G SDI OUT 1, 2 (SER02)****6 3G SDI OUT 3, 4 (SER02)**

Optional SDI output connector. It outputs SD, HD, and 3G signals.  
Adding SER21 allows the connector to output the 4K 3G-Quad signal as well. (Two SER02 units are required.)  
[See also] "6.3.4 SDI Signal Output (SER02)" "12 SDI CONFIG MENU (SER02/SER04)"

**7 IP OUTPUT (SER04)**

Optional SFP+/SFP28 port. It outputs signals compliant with ST 2022-6 and ST 2110.  
To use this port, insert one of the following SFP modules sold separately.

- SFP+ MULTI-MODE (LC2148)
- SFP+ SINGLE-MODE (LC2149)
- SFP28 MULTI-MODE (LC2151)
- SFP28 SINGLE-MODE (LC2152)

[See also] "6.3.7 IP Signal Output (SER04)" "14 IP CONFIG MENU (SER04)" "15.7 Setting the IP (SER04)"

**8 12G SDI OUTPUT (SER04)**

Optional SDI output connector. It outputs SD, HD, 3G, 6G, and 12G signals.

[See also] "6.3.5 SDI Signal Output (SER04)" "12 SDI CONFIG MENU (SER02/SER04)"

**9 Serial number label**

The serial number is printed on this label.

**10 LTC/REMOTE**

Time code and remote I/O connector.

A separately sold LTC cable (LC2185) is available for connection with LT4448.

[See also] "6.3.7 LTC Signal I/O and Remote Control" "10 LTC CONFIG MENU"

**11 ETHERNET/CONTROL**

Ethernet port.

It supports SNMP, HTTP, and NTP.

[See also] "17 SNMP" "18 WEB BROWSER"

**12 ANALOG BLACK OUT 1-6**

Analog black output connectors.

They output HD tri-level sync or NTSC/PAL black burst signals.

[See also] "6.3.1 Analog Black Signal Output" "8 BLACK CONFIG MENU"

**13 GENLOCK/CW IN**

Loop-through analog sync signal or 10 MHz CW input connectors.

For analog sync signals, input HD tri-level sync or NTSC/PAL black burst signals.

[See also] "6.2.2 Genlock Mode" "6.2.3 CW Mode" "7 REFERENCE CONFIG MENU"

**14 WCLK**

48 kHz word-clock output connector.

[See also] "6.3.2 Audio Signal Output" "9.3 Setting the Word-clock Output"

**15 SILENCE**

AES/EBU output connector compatible with DARS.

[See also] "6.3.2 Audio Signal Output" "9.2 Setting the Silence Output"

**16 AES/EBU**

AES/EBU output connector.

[See also] "6.3.2 Audio Signal Output" "9.1 Setting the AES/EBU Output"

**17 Fan (LP2184)**

Cooling fan for the instrument. It needs to be replaced periodically.

[See also] "19.2.3 Rear Fan Unit Replacement"

## **18 POWER2 (SER11)**

Optional AC inlet. Adding this option provides power supply redundancy.

It needs to be replaced periodically.

The LED lights in green or red in conjunction with the POWER2 LED on the front panel.

[See also] "5.2 Turning the Power On" "19.2.1 Power Supply Unit Replacement"

## **19 POWER1**

AC inlet. It needs to be replaced periodically.

The LED lights in green or red in conjunction with the POWER1 LED on the front panel.

[See also] "5.2 Turning the Power On" "19.2.1 Power Supply Unit Replacement"

# 5 PREPARATIONS

## 5.1 Installation

The instrument can be mounted on a rack or placed on a stand or shelf for use.

### 5.1.1 Rack Mounting

If you are mounting this instrument on a rack, be sure to provide additional support for the body of the instrument. If you use only the front panel to mount the instrument, the instrument case may deform or fall. This instrument can be mounted on a 19-inch EIA standard rack.

The recommended slide rails are shown in the following table. To mount this instrument on a rack, two slide rails, one for the left side and one for the right side of the instrument, are required.

Table 5-1 | Recommended slide rails

| Model Number | Manufacturer                      |
|--------------|-----------------------------------|
| KC-251-16    | TAKIGEN MFG CO., LTD.             |
| C203-16      | Accuride Japan Co., Ltd.          |
| C-203-16     | Settsu Metal Industrial Co., Ltd. |

### Slide Rail Attachment

Attach slide rails to the instrument using binding head machine screws (M4×10).

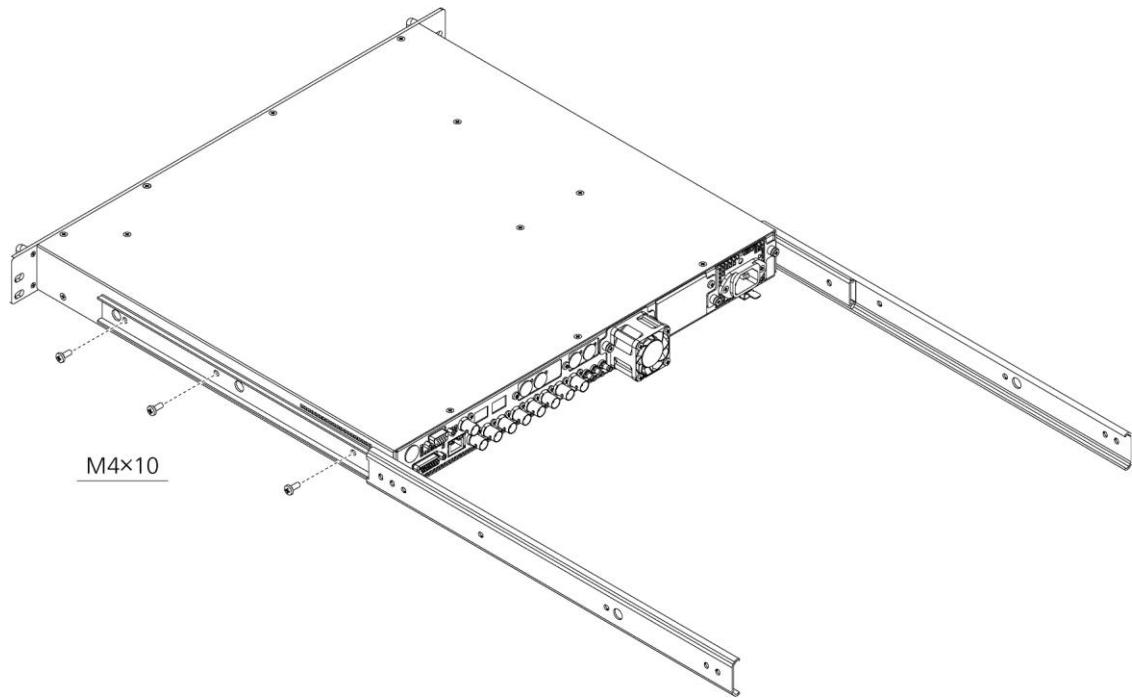

Figure 5-1 | Slide rail attachment

### Rack Mounting

Insert the instrument into the rack, and then fasten the front panel to the rack.  
Use M5, 10-32UNF, or 12-24UNC screws.

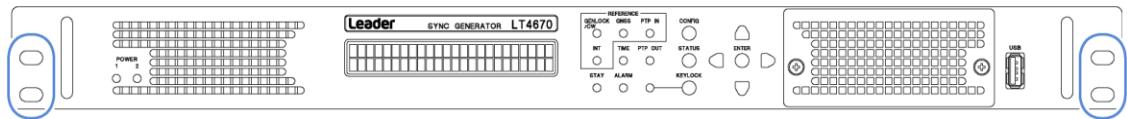

Figure 5-2 | Rack mounting

#### 5.1.2 Installation Without Using a Rack

When installing the instrument without using a rack, place it horizontally on a securely installed stand or shelf.

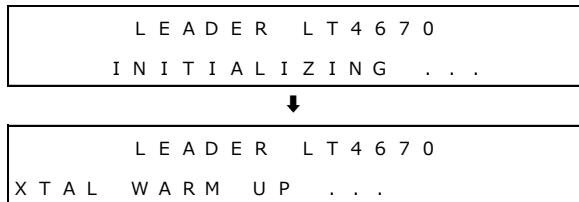

Use it with great care to prevent it from falling.

## 5.2 Turning the Power On

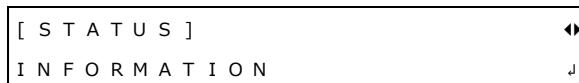

### 5.2.1 Turning the Instrument On and Off

This instrument does not have a power switch. To turn on the power, connect the supplied power cord to POWER1 on the rear panel.

When you turn on the power, the following screens are displayed. During this time, key operations are not possible.

When the following screen is displayed, the startup is complete.

When you turn on the power, POWER 1 on the front panel and the LED on the rear panel light in green.

If an error occurs in the fan of the power supply unit, these LEDs turn red. In this case, check the power supply unit where the error occurred and contact your local LEADER agent.

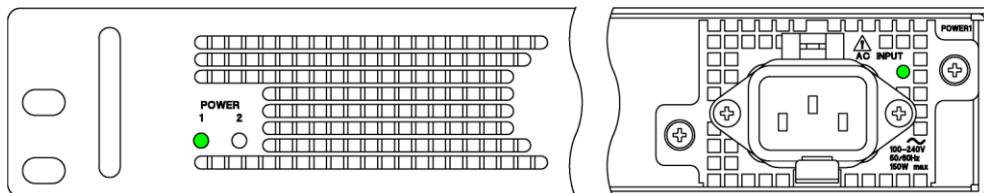

Figure 5-3 | POWER LEDs

Immediately after the power is turned on, the instrument is set to the conditions that it was in when the power was turned off the last time.

However, if POWER ON RECALL on the SYSTEM CONFIG menu is set to an option other than OFF, the instrument starts with the specified preset.

[See also] "15.2.4 Power-on Settings"

### 5.2.2 Mounting the AC Cord Clamp

An AC cord clamp is included with the instrument to prevent the power cord from being pulled free of the AC inlet. To mount it, follow the procedure below.

#### 1 Mount the AC cord clamp to the LT4670.

Insert it until it clicks into place.

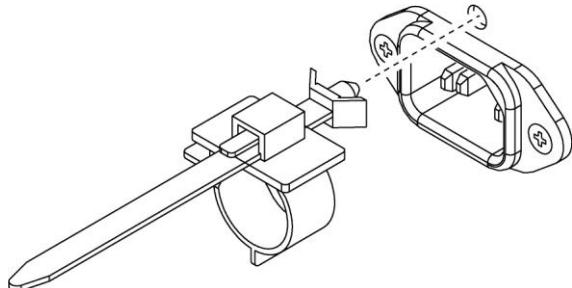

Figure 5-4 | Mounting the AC cord clamp 1

#### 2 Connect the power cable.

Ensure that the power cable is inserted within the loop of the AC cord clamp.

#### 3 Adjust the position of the loop portion of the AC cord clamp.

Move the loop portion forward or backward to position it as shown below.

To pull the loop portion forward, lift the lever first and then move the loop portion.

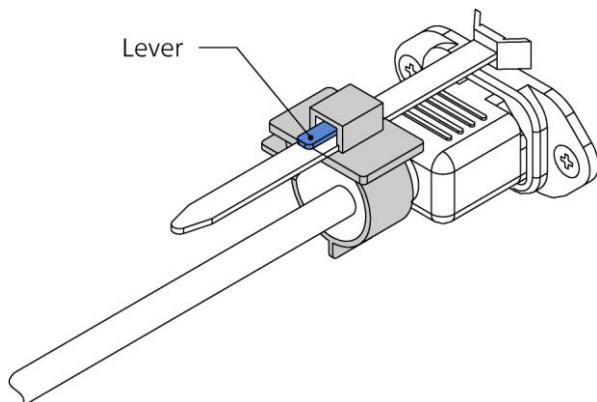

Figure 5-5 | Mounting the AC cord clamp 2

**4 Adjust the size of the loop portion of the AC cord clamp.**

Turn the knob to tighten the loop portion until the knob stops.

To loosen the loop portion, lift the lever first and then move the loop portion.

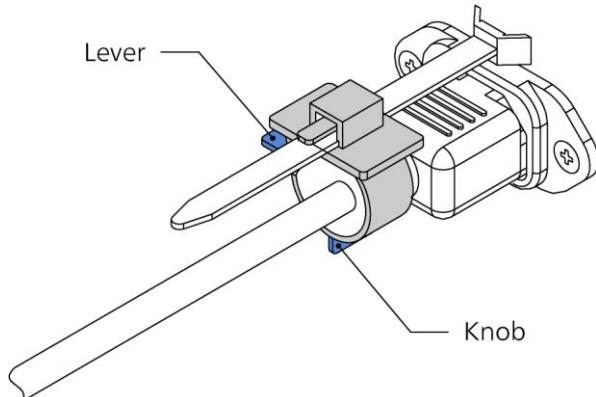

Figure 5-6 | Mounting the AC cord clamp 3

**5 Pull the power cord to check that it does not come loose.****5.2.3 Adding the Power Supply Unit (SER11)**

Adding the optional power supply unit (SER11) to POWER2 on the rear panel provides power supply redundancy. Even if one of the power supplies fails, the instrument can continue to run with the other power supply, enabling you to build a highly reliable system.

It is possible to add the power supply unit with the power turned on. The following is the procedure for adding the power supply unit to POWER2 with the power of POWER1 turned on as an example.

The power supply unit must be added by LEADER or the designated service personnel. Contact your local LEADER agent.

**1 Insert the new power supply unit to POWER2.**

Insert the unit until it clicks into place.

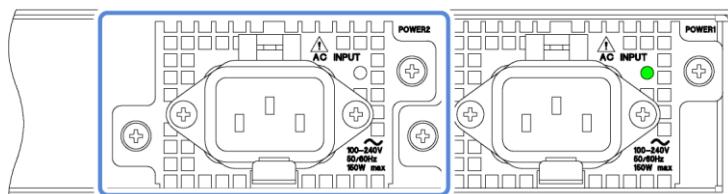

Figure 5-7 | Adding the power supply unit 1

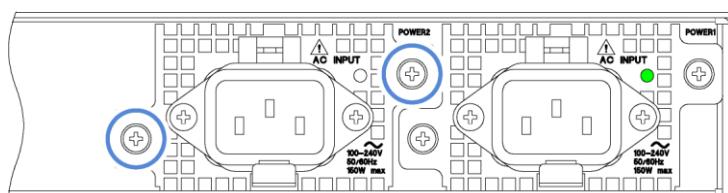

**2 Tighten the two screws.**

Figure 5-8 | Adding the power supply unit 2

**3 Connect the power cable to POWER2.**

WARNING

Install the power supply unit first and then connect the power cable.

Failure to follow this procedure may result in electric shock.

**4 Check that the LED on the power supply unit lights in green.**

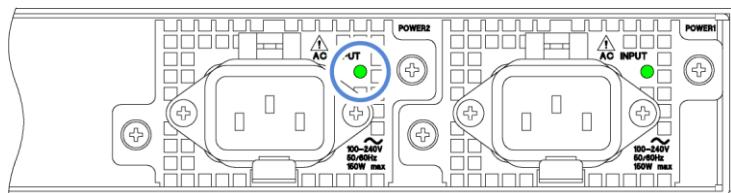

Figure 5-9 | Adding the power supply unit 3

When the power is supplied to POWER1 and POWER2, the POWER LEDs on the front panel light in green. Usually, use the product in this state.

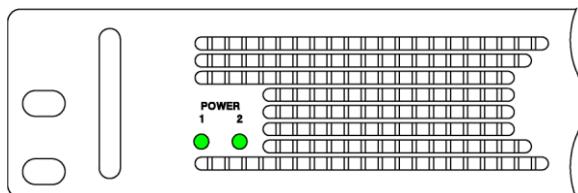

Figure 5-10 | POWER LEDs (during normal operation)

In one of the following situations, either of the POWER LEDs on the front panel turns red and an alarm is displayed.

- An error occurs in the fans of the power supply units.
- An error occurs in the power supply units.
- The power is not supplied to either of the power supply units.

In this case, check the power supply units in which an error occurred and contact your local LEADER agent.

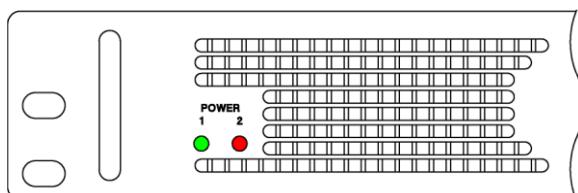

Figure 5-11 | POWER LEDs (when an error occurs)

# 6 BASIC OPERATION

## 6.1 Operation Basics

### 6.1.1 Connecting a USB Memory Device

To write and read various types of data, you can use a USB memory device.

You can connect and disconnect a USB memory device with the power turned on.

Use a USB memory device with USB DEVICE on the SYSTEM CONFIG menu set to ENABLE.

|  |
|--|
| 1 . U S B   D E V I C E  |
| <input checked="" type="checkbox"/> E N A B L E <input type="checkbox"/> D I S A B L E |

#### Connecting a USB Memory Device

When you connect a USB memory device, the following message appears.

Do not turn the power off or remove the USB memory device while it is being accessed.

If the USB memory is not recognized even though it is connected correctly, set USB DEVICE in the SYSTEM CONFIG menu to DISABLE, then set it back to ENABLE.

|   |
|---|
| * U S B   S T O R A G E   D E V I C E *               |
| *                    I N S E R T                    * |

#### Removing the USB Memory Device

When you remove the USB memory device, the following message appears.

|   |
|---|
| * U S B   S T O R A G E   D E V I C E *             |
| *                    E J E C T                    * |

### 6.1.2 Enabling the Key Lock

You can enable the key lock to prevent settings from being changed when keys are pressed by mistake.

#### Enabling the Key Lock

Hold down the KEYLOCK key until the following message is displayed.

This enables the key lock, causing the LED to light in green.

While the key lock is enabled, the following message is displayed if you press a key; no key operations are possible.

|   |
|---|
| *                    K E Y   L O C K                    * |
| P U S H   < K E Y L O C K >   3 S E C                     |

#### Releasing the Key Lock

Hold down the KEYLOCK key until the following message is displayed.

This releases the key lock, causing the LED to turn off.

|   |
|---|
| *                    K E Y   L O C K                    * |
| *    U N L O C K   S U C C E S S                    *     |

### 6.1.3 Menu Operations

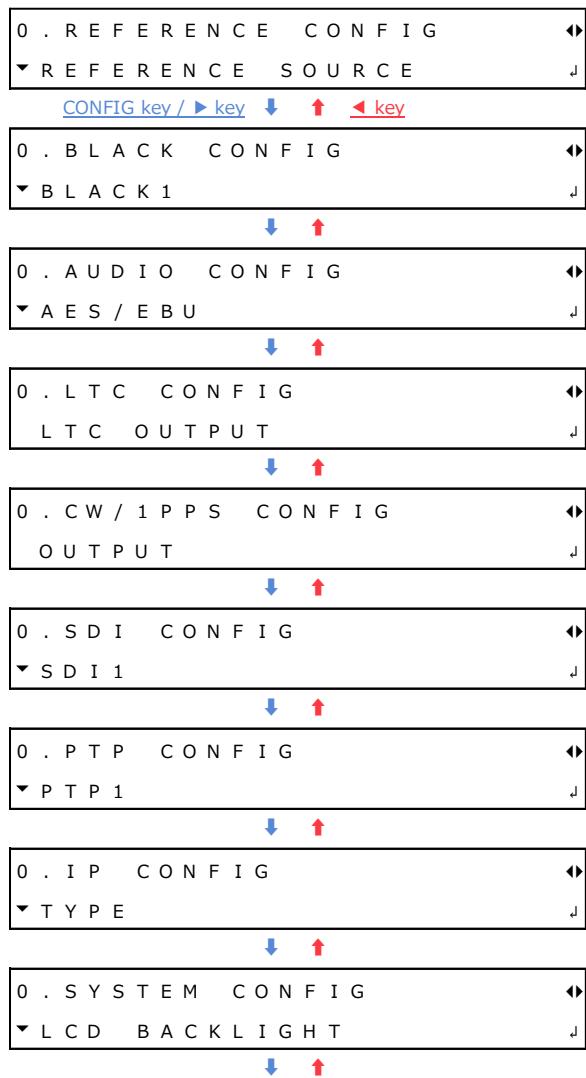

The menu is largely divided into two types, the CONFIG menu and the STATUS menu.

#### **CONFIG Menu**

---

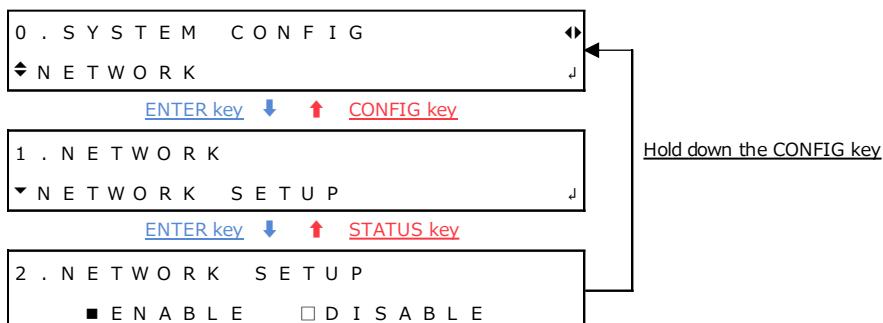

This menu is used to configure this instrument. Press the CONFIG key to display it.

When the menu level is 0, press the CONFIG key or the ► key to switch from one menu to another in the order below. Press the ◀ key to switch from one menu to another in the reverse order. (This includes option menus).

Except for some cases, a number is displayed at the upper left of the CONFIG menu. This number indicates the menu level. The larger the number, the deeper the level.

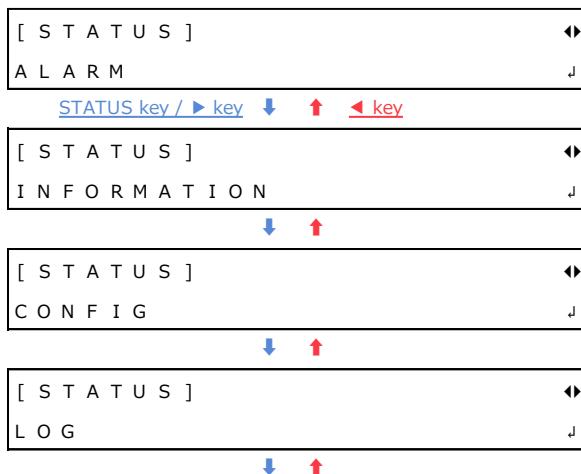

To enter a lower level menu, press the ENTER key. To return to a higher level menu, press the CONFIG key. When the menu level is other than 0, hold down the CONFIG key to return to menu level 0.

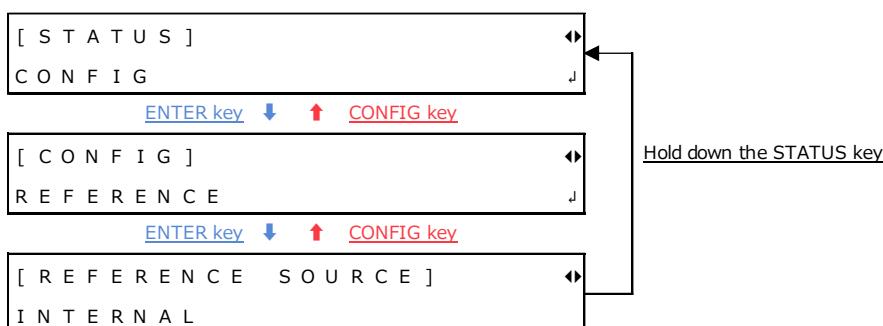

### STATUS Menu

This menu displays the status of this instrument. Press the STATUS key to display it.

When you are the top level, press the STATUS key or the ► key to switch from one menu to another in the order below. Press the ◀ key to switch from one menu to another in the reverse order.

No levels are indicated on the STATUS menu. As with the CONFIG menu, to enter a lower level menu, press the ENTER key. To return to a higher level menu, press the STATUS key. When you are at a level other than the top level, hold down the STATUS key to return to the top level.

## Specifying Values

To specify a value, select a digit with the **◀** and **▶** keys first and then change it with the **▲** and **▼** keys. Hold down the **▲** or **▼** key to change the value quickly.

Except for some cases, value modifications are applied immediately, but the value is not confirmed until you press the ENTER key.

```
1 . G E N L O C K   T I M I N G   F I N E
F I N E :      0
```

## Selecting Items

To select an item, use the **◀** and **▶** keys.

```
1 . L C D   B A C K L I G H T
■ O N     □ A U T O   O F F   □ O F F
```

If a menu contains many items, the menu may look like the one shown below. An \* is displayed for the currently set item.

```
1 . R E F E R E N C E   S O U R C E
♦ * G E N L O C K   F M T - A U T O
```

If a cursor (\_) is displayed, use the **◀** and **▶** keys to move the cursor, and use the **▲** key to turn the item on and the **▼** key to turn it off.

```
3 . S D I 1   C O M P O N E N T
■ Y / G     ■ C b / B     ■ C r / R
```

To select a single item from multiple menus, use the **▲** and **▼** key to select a menu and then use the **◀** and **▶** key to select the item.

```
4 . S D I 1   C O L O R   B A R
▼ * 1 0 0 %
```

```
4 . S D I 1   M O N I T O R
♦ ▶ F L A T   F I E L D   1 0 0 %
```

```
4 . S D I 1   S D I
^   C H E C K   F I E L D
```

## Confirming and Canceling Settings

To confirm settings, press the ENTER key.

After you change settings, press the CONFIG key instead of the ENTER key to return the settings to their original values.

## 6.2 Signal Input (Genlock Operation)

Genlock refers to the act of establishing synchronization using a reference signal. Here, the operation in the following five modes is explained according to the following flow of steps.

---

|                    |   |
|--------------------|---|
| Internal mode:     | Mode in which an internal signal is used as a reference signal<br>(factory default value) |
| Genlock mode:      | Mode in which an external analog sync signal is used as a reference signal                |
| CW mode:           | Mode in which an external 10MHz CW signal is used as a reference signal                   |
| GNSS mode (SER01): | Mode in which an external GNSS signal is used as a reference signal                       |
| PTP mode (SER03):  | Mode in which a PTP signal is used as a reference signal                                  |

---

1. Setting
  2. Input of a reference signal
  3. Lock
  4. An error occurs in the reference signal
  5. The reference signal is restored
  6. Relock
- 

The operation performed when the reference signal is restored differs depending on RECOVERY MODE on the REFERENCE CONFIG menu. When RECOVERY MODE is set to AUTO, relock is automatically performed. When it is set to MANUAL, relock is not performed. Here, the operation performed when the mode is AUTO, in which relock is automatically performed, is explained.

|  |
|--|
| 2 . R E C O V E R Y   M O D E  |
| <input checked="" type="checkbox"/> A U T O <input type="checkbox"/> M A N U A L |

If "INT PLL" is displayed on "STATUS > INFORMATION > REF SRC" during genlock operation, it indicates that the crystal inside the instrument is faulty. If this happens, contact your local LEADER agent.

|                                       |   |
|---------------------------------------|---|

| I N T   P L L                         |   |

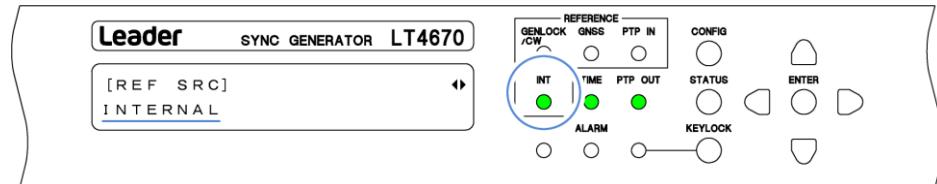

### 6.2.1 Internal Mode

#### 1. Setting

On the REFERENCE CONFIG menu, set REFERENCE SOURCE to INTERNAL.

```
1 . R E F E R E N C E   S O U R C E
▶ * I N T E R N A L
```

Under "STATUS > INFORMATION > REF SRC", "INTERNAL" appears, and INT on the front panel lights in green. Use the instrument in this state.

## 6.2.2 Genlock Mode

### 1. Setting

On the REFERENCE CONFIG menu, set REFERENCE SOURCE to GENLOCK FMT-AUTO or GENLOCK FMT-MANUAL.

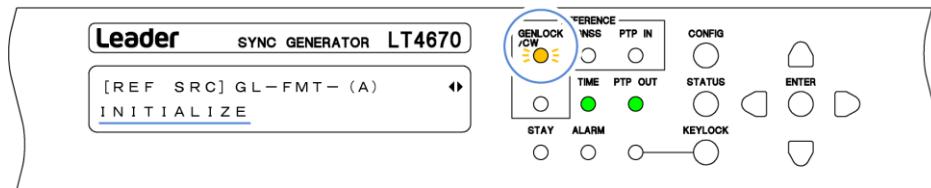

```
1 . R E F E R E N C E   S O U R C E
◆ * G E N L O C K   F M T - A U T O
```

When you set it to GENLOCK FMT-MANUAL, set the reference signal format manually. Use GENLOCK FORMAT on the REFERENCE CONFIG menu to select the reference signal format.

When you set it to GENLOCK FMT-AUTO, this instrument automatically identifies the reference signal format; this setting is not necessary.

```
1 . G E N L O C K   N T S C
▼ ▶ * N T S C   B B
```

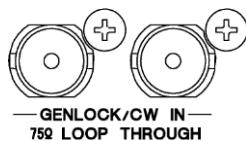

When you set REFERENCE SOURCE to GENLOCK, GENLOCK/CW on the front panel blinks in orange, and under "STATUS > INFORMATION > REF SRC", "INITIALIZE" appears. From now on, this screen is used for explanation.

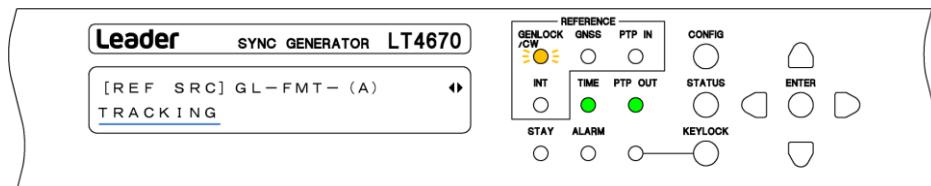

### 2. Input of a reference signal

Apply an HD tri-level sync or NTSC/PAL black burst signal to one of the GENLOCK/CW IN connectors on the rear panel. Use either of the following method to apply it.

- Apply to one connector and terminate the other at 75 Ω.
- Apply to one connector, connect the other to another device, and terminate the device at the end of the chain at 75 Ω.

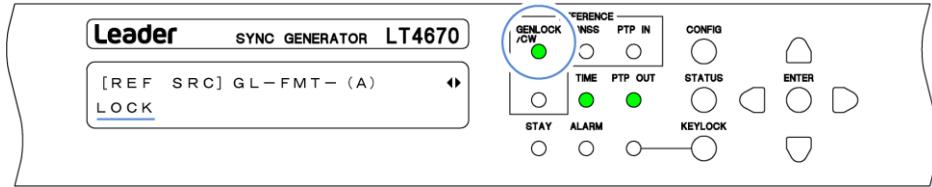

When you apply the signal, the message changes to "TRACKING" and the reference signal is introduced. Wait in this state.

### 3. Lock

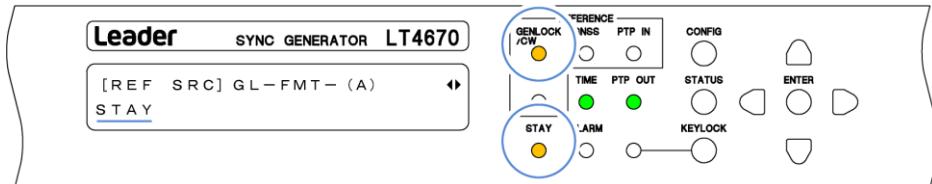

When the instrument is locked with the reference signal, GENLOCK/CW on the front panel lights in green, and the message changes to "LOCK". Use the instrument in this state.

### 4. An error occurs in the reference signal

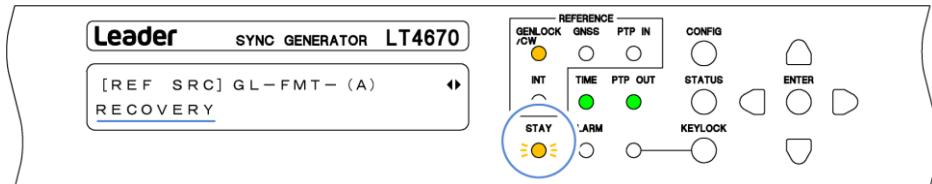

If an error occurs in the reference signal, the frequency that was in use immediately before the error occurred is maintained (stay-in-sync function).

When stay-in-sync becomes active, GENLOCK/CW and STAY light in orange, and the message changes to "STAY". In this case, check the reference signal.

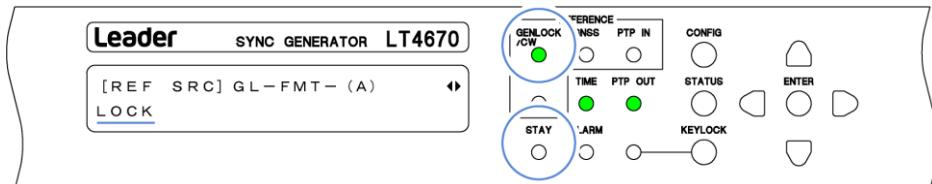

### 5. The reference signal is restored

When the reference signal is restored, STAY on the front panel blinks in orange, and the message changes to "RECOVERY". Wait in this state.

### 6. Relock

When the instrument is relocked with the reference signal, GENLOCK/CW on the front panel lights in green and STAY turns off. In addition, the message changes to "LOCK". Use the instrument in this state.

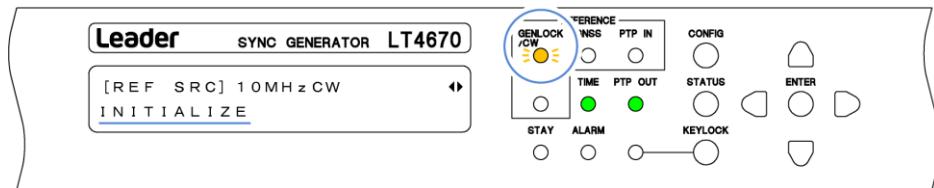

## 6.2.3 CW Mode

### 1. Setting

On the REFERENCE CONFIG menu, set REFERENCE SOURCE to 10MHz CW.

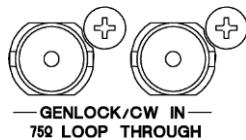

When you set REFERENCE SOURCE to 10MHz CW, GENLOCK/CW on the front panel blinks in orange, and under "STATUS > INFORMATION > REF SRC", "INITIALIZE" appears. From now on, this screen is used for explanation.

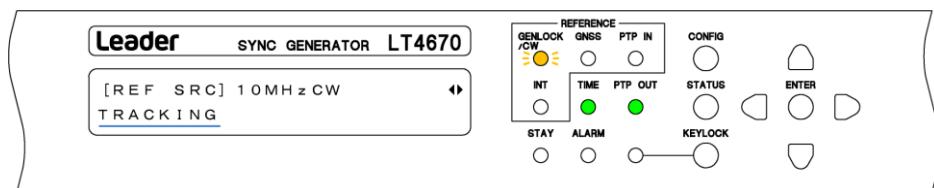

### 2. Input of a reference signal

Apply a 10MHz CW signal to one of the GENLOCK/CW IN connectors on the rear panel. Use either of the following methods to apply it.

- Apply to one connector and terminate the other at  $75\ \Omega$ .
- Apply to one connector, connect the other to another device, and terminate the device at the end of the chain at  $75\ \Omega$ .

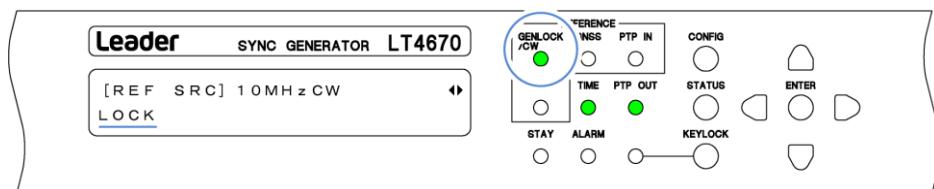

When you apply the signal, the message changes to "TRACKING" and the reference signal is introduced. Wait in this state.

### 3. Lock

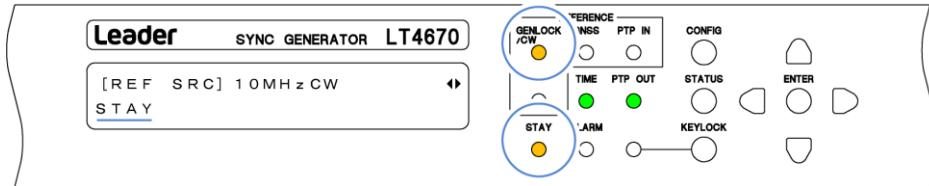

When the instrument is locked with the reference signal, GENLOCK/CW on the front panel lights in green, and the message changes to "LOCK". Use the instrument in this state.

#### 4. An error occurs in the reference signal

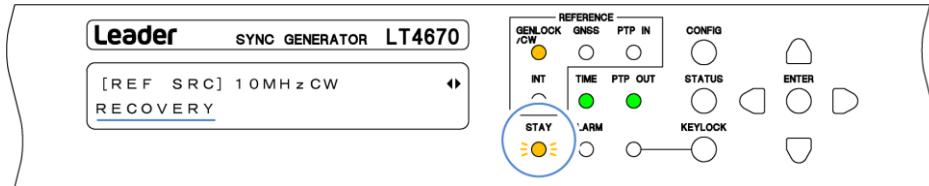

If an error occurs in the reference signal, the frequency that was in use immediately before the error occurred is maintained (stay-in-sync function).

When stay-in-sync becomes active, GENLOCK/CW and STAY light in orange, and the message changes to "STAY". In this case, check the reference signal.

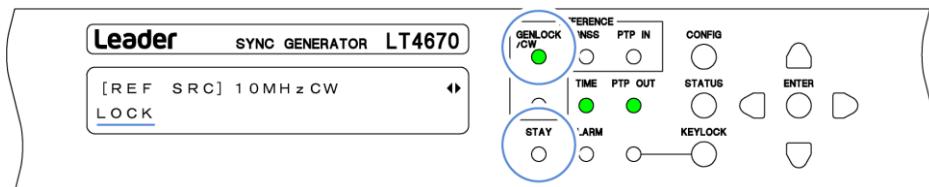

#### 5. The reference signal is restored

When the reference signal is restored, STAY on the front panel blinks in orange, and the message changes to "RECOVERY". Wait in this state.

#### 6. Relock

When the instrument is relocked with the reference signal, GENLOCK/CW on the front panel lights in green and STAY turns off. In addition, the message changes to "LOCK". Use the instrument in this state.

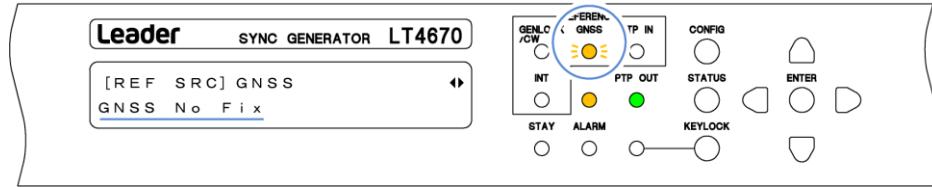

## 6.2.4 GNSS mode (SER01)

**1. Setting**

On the REFERENCE CONFIG menu, set REFERENCE SOURCE to GNSS.

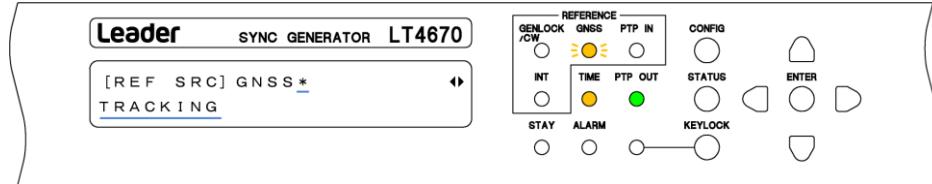

When you set REFERENCE SOURCE to GNSS, GNSS on the front panel blinks in orange, and under "STATUS > INFORMATION > REF SRC", "GNSS No. Fix" appears. From now on, this screen is used for explanation.

**2. Input of a reference signal**

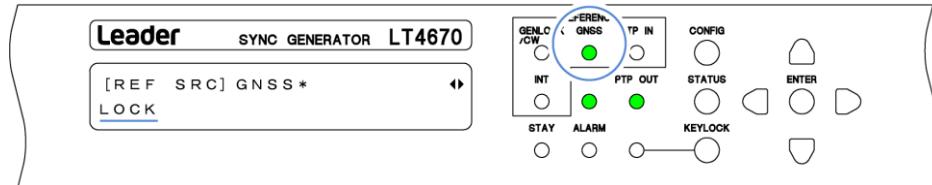

Apply a GNSS signal to the GNSS IN connector on the rear panel.

When you apply the signal, an "\*" is attached after "GNSS". In addition, the message changes to "ADJUST FREQ TO GNSS" > "ADJUST PHASE TO GNSS" > "TRACKING" in this order, and the reference signal is introduced. Wait in this state.

**3. Lock**

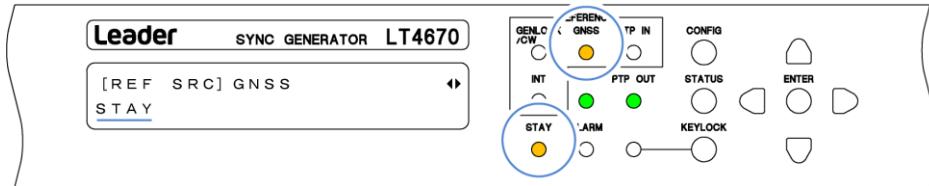

When the instrument is locked with the reference signal, GNSS on the front panel lights in green, and the message changes to "LOCK". Use the instrument in this state.

#### 4. An error occurs in the reference signal

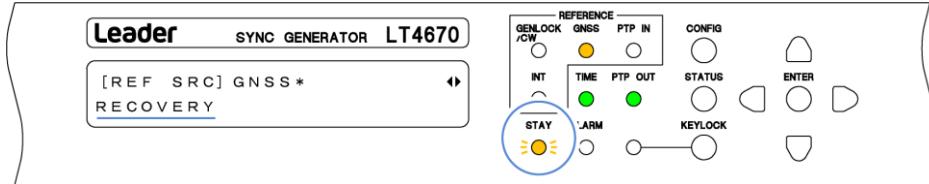

If an error occurs in the reference signal, the frequency that was in use immediately before the error occurred is maintained (stay-in-sync function).

When stay-in-sync becomes active, GNSS and STAY light in orange, and the message changes to "STAY". In this case, check the reference signal.

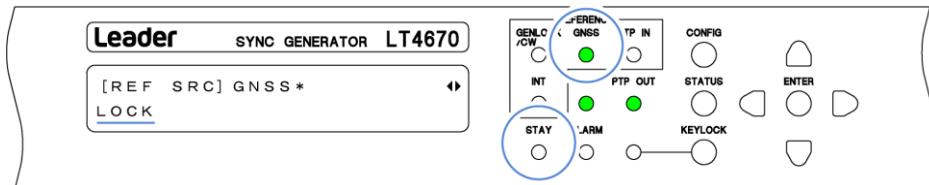

#### 5. The reference signal is restored

When the reference signal is restored, STAY on the front panel blinks in orange, and the message changes to "RECOVERY". Wait in this state.

#### 6. Relock

When the instrument is relocked with the reference signal, GNSS on the front panel lights in green and STAY turns off. In addition, the message changes to "LOCK". Use the instrument in this state.

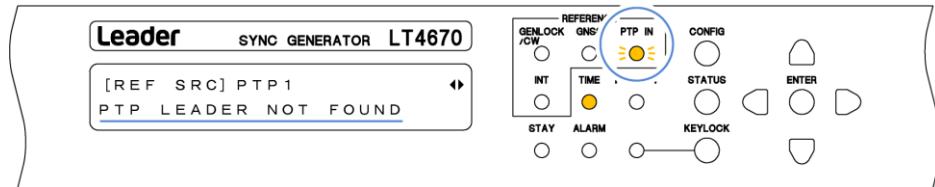

## 6.2.5 PTP mode (SER03)

### 1. Setting

In the REFERENCE CONFIG menu, set REFERENCE SOURCE to PTP1, PTP2, or PTP1/2. In the following example, it is set to PTP1.

When you set REFERENCE SOURCE to PTP1 or PTP2, PTP IN on the front panel blinks in orange, and under "STATUS > INFORMATION > REF SRC", "PTP FOLLOWER AGING" > "PTP LEADER NOT FOUND" appears. From now on, this screen is used for explanation.

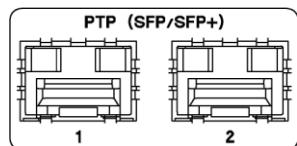

### 2. Input of a reference signal

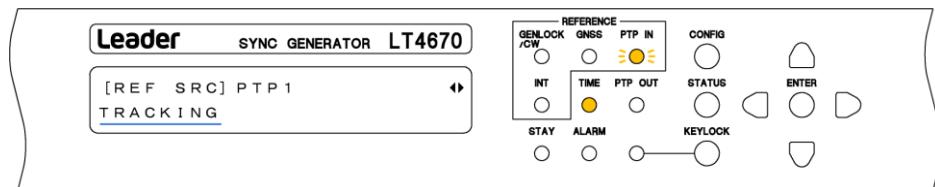

Apply PTP signals to PTP connectors on the rear panel.

Mount and use one of the SFP and SFP+ modules listed below, which are sold separately. You can connect and disconnect the SFP and SFP+ modules with the power turned on.

- SFP RJ-45 (LC2141/LC2142)
- SFP+ MULTI-MODE (LC2148)
- SFP+ SINGLE-MODE (LC2149)

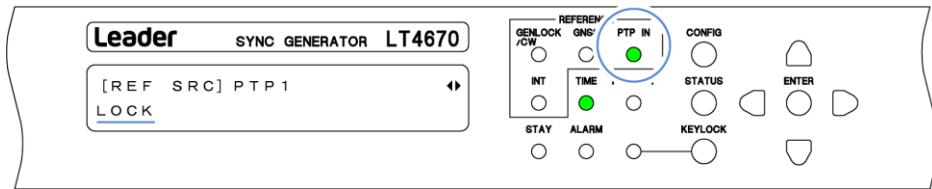

When you apply the signal, the message changes to "PTP ADJUST FREQ" > "PTP ADJUST PHASE" > "TRACKING" in this order, and the reference signal is introduced. Wait in this state.

### 3. Lock

When the instrument is locked with the reference signal, PTP IN on the front panel lights in green, and the message changes to "LOCK". Use the instrument in this state.

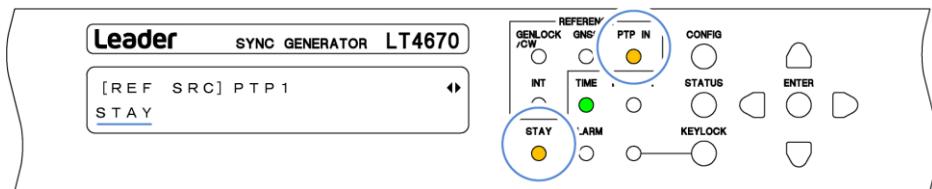

When REFERENCE SOURCE is set to PTP1/2, the instrument automatically selects the reference signal. "LOCK" is displayed for the reference signal, and "PASSIVE" is displayed for the other signal.

### 4. An error occurs in the reference signal

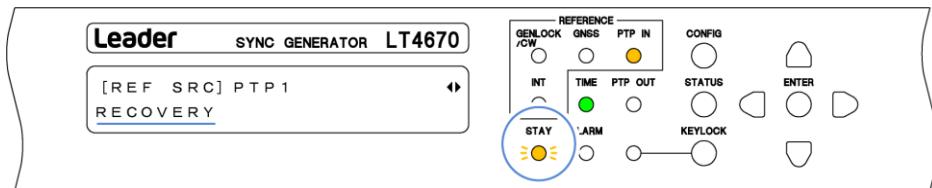

If an error occurs in the reference signal, the frequency that was in use immediately before the error occurred is maintained (stay-in-sync function).

When stay-in-sync becomes active, PTP IN and STAY light in orange, and the message changes to "STAY". In this case, check the reference signal.

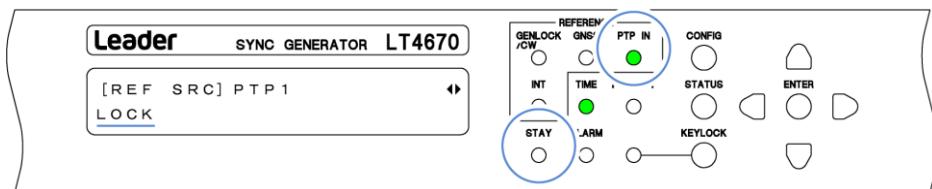

### 5. The reference signal is restored

When the reference signal is restored, STAY on the front panel blinks in orange, and the message changes to "PTP ADJUST FREQ" > "PTP ADJUST PHASE" > "RECOVERY" in this order. Wait in this state.

### 6. Relock

When the instrument is relocked with the reference signal, PTP IN on the front panel lights in green and STAY turns off. In addition, the message changes to "LOCK". Use the instrument in this state.

When REFERENCE SOURCE is set to PTP1/2, the PTP IN LED on the front panel is displayed as shown below according to the combination of the PTP1 state and the PTP2 state.

Table 6-1 | PTP IN LED

|      |  | PTP1                |   |  |
|------|--|---------------------|---|--|
|      |  | ·LOCK<br>·PASSIVE   | ·STAY<br>·PTP ADJUST FREQ<br>(when restored)<br>·PTP ADJUST PHASE<br>(when restored)<br>·RECOVERY | ·PTP FOLLOWER AGING<br>·PTP LEADER NOT FOUND<br>·PTP ADJUST FREQ<br>(when locked)<br>·PTP ADJUST PHASE<br>(when locked)<br>·TRACKING |
| PTP2 | ·LOCK<br>·PASSIVE  | Lit in green<br>    | Lit in orange<br>   | Blinking orange<br>  |
|      | ·STAY<br>·PTP ADJUST FREQ<br>(when restored)<br>·PTP ADJUST PHASE<br>(when restored)<br>·RECOVERY                                    | Lit in orange<br>   | Lit in orange<br>   | Blinking orange<br>  |
|      | ·PTP FOLLOWER AGING<br>·PTP LEADER NOT FOUND<br>·PTP ADJUST FREQ<br>(when locked)<br>·PTP ADJUST PHASE<br>(when locked)<br>·TRACKING | Blinking orange<br> | Blinking orange<br>   | Blinking orange<br>  |

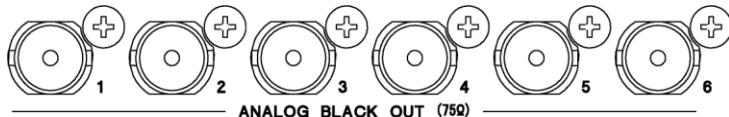

## 6.3 Signal Output

### 6.3.1 Analog Black Signal Output

Six analog black signals synchronized with the reference signal are output from ANALOG BLACK OUT connectors 1 to 6 on the rear panel.

You can set the analog black signals on the BLACK CONFIG menu.

[See also] "8 BLACK CONFIG MENU"

### 6.3.2 Audio Signal Output

An AES/EBU signal synchronized with the reference signal is output from the AES/EBU connector on the rear panel; a silence (DARS) signal synchronized with the reference signal is output from the SILENCE connector; and a word-clock signal synchronized with the reference signal is output from the WCLK connector. Use DIN cables.

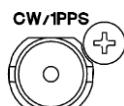

You can set the audio signals on the AUDIO CONFIG menu.

[See also] "9 AUDIO CONFIG MENU"

### 6.3.3 CW/1PPS Signal Output

A 10MHz CW signal or 1PPS signal synchronized with the reference signal is output from the CW/1PPS connector on the rear panel.

You can select the output signal type with CW/1PPS OUTPUT on the CW/1PPS CONFIG menu.

[See also] "11 CW/1PPS CONFIG MENU"

### 6.3.4 SDI Signal Output (SER02)

Four SDI signals synchronized with the reference signal are output from 3G SDI OUT connectors 1 to 4 on the rear panel.

You can set the SDI signal on the SDI CONFIG menu.

[See also] "12 SDI CONFIG MENU (SER02/SER04)"

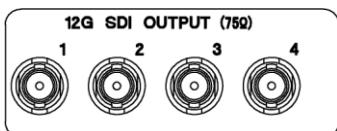

### 6.3.5 SDI Signal Output (SER04)

Four SDI signals synchronized with the reference signal are output from 12G SDI OUT connectors 1 to 4 on the rear panel.

You can set the SDI signal on the SDI CONFIG menu.

[See also] "12 SDI CONFIG MENU (SER02/SER04)"

When using Micro BNC-BNC conversion cables, please prepare the following or contact your local LEADER agent.

---

|               |                           |
|---------------|---------------------------|
| Product Name: | Micro BNC Cable           |
| Model:        | DM2.5HWS002EA-BJ          |
| Length:       | 200 mm                    |
| Manufacturer: | Canare Electric Co., Ltd. |

---

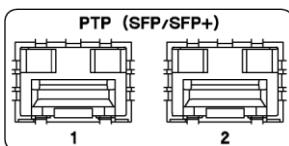

### 6.3.6 PTP Signal Output (SER03)

The SFP transceiver is a Class 1 laser product.

Ensure that laser light does not directly strike the eyes.

Two PTP signals synchronized with the reference signal are output from PTP connectors 1 and 2 on the rear panel.

Mount and use one of the SFP and SFP+ modules listed below, which are sold separately. You can connect and disconnect the SFP and SFP+ modules with the power turned on.

- SFP RJ-45 (LC2141/LC2142)
- SFP+ MULTI-MODE (LC2148)
- SFP+ SINGLE-MODE (LC2149)

To output the PTP signal requires setting the PTP Leader. In the PTP CONFIG menu, set PTP1 MODE or PTP2 MODE to ENABLE LEADER.

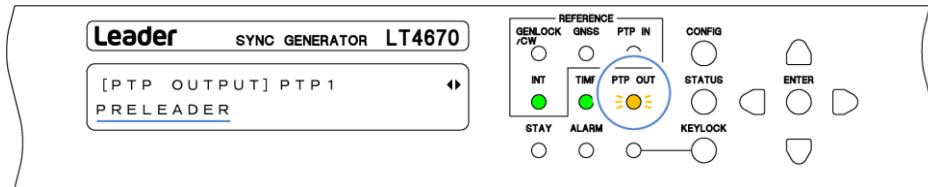

[See also] "13.1 PTP Leader and PTP Follower"

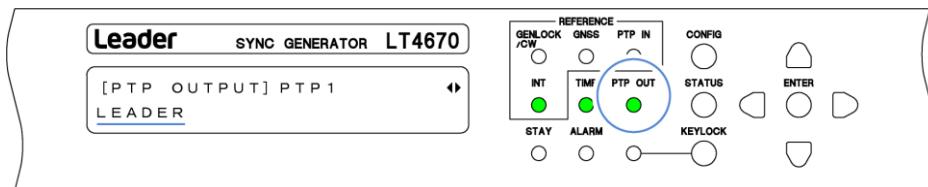

## 6 BASIC OPERATION

When you set PTP1 MODE or PTP2 MODE to ENABLE LEADER, PTP OUT on the front panel blinks in orange, and the "STATUS > INFORMATION > PTP OUTPUT" message is switched to "TIME MEASURING" > "TIME SETTING" > "LISTENING" > "PRELEADER" in this order and displayed.

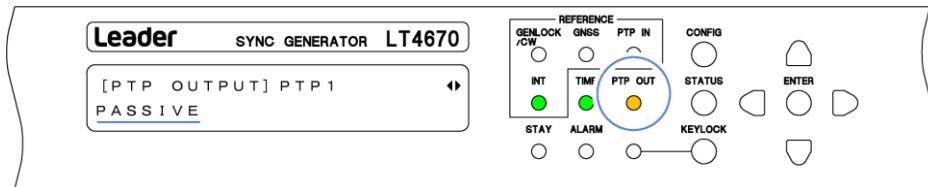

During this time, the PTP signal is not output correctly. Wait in this state.

When the PTP output becomes normal, PTP OUT on the front panel lights in green, and the message changes to "LEADER". Use the instrument in this state.

Note that when the BMCA function causes this instrument to enter the passive state, PTP OUT on the front panel lights in orange and the message changes to "PASSIVE".

When PTP1 and PTP2 are both leaders, the PTP OUT LED on the front panel is displayed as shown below according to the combination of the PTP1 state and the PTP2 state.

Table 6-2 | PTP OUT LED

|      |  | PTP1                |                     |  |
|------|--|---------------------|---------------------|--|
|      |  | ·LEADER             | ·PASSIVE            | ·TIME MEASURING<br>·TIME SETTING<br>·LISTENING<br>·PRELEADER |
| PTP2 | ·LEADER  | Lit in green<br>    | Lit in orange<br>   | Blinking orange<br>  |
|      | ·PASSIVE   | Lit in orange<br>   | Lit in orange<br>   | Blinking orange<br>  |
|      | ·TIME MEASURING<br>·TIME SETTING<br>·LISTENING<br>·PRELEADER | Blinking orange<br> | Blinking orange<br> | Blinking orange<br>  |

### 6.3.7 IP Signal Output (SER04)

**WARNING**

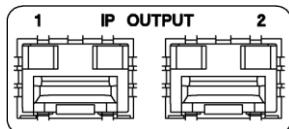

The SFP transceiver is a Class 1 laser product.

Ensure that laser light does not directly strike the eyes.

Two IP signals synchronized with the reference signal are output from IP OUTPUT connectors 1 and 2 on the rear panel.

You can set the IP signal on the IP CONFIG menu and IP OPTION menu.

[See also] "14 IP CONFIG MENU (SER04)" "15.7 Setting the IP (SER04)"

For IP signals, the patterns specified on the SDI CONFIG menu are output as follows. Up to four streams can be output per port within the band.

[See also] "12 SDI CONFIG MENU (SER02/SER04)"

- IP OUTPUT1/2 Stream1:      Output the pattern specified with SDI1
- IP OUTPUT1/2 Stream2:      Output the pattern specified with SDI2
- IP OUTPUT1/2 Stream3:      Output the pattern specified with SDI3
- IP OUTPUT1/2 Stream4:      Output the pattern specified with SDI4

Mount and use one of the SFP+ and SFP28 modules listed below, which are sold separately. You can connect and disconnect the SFP+ and SFP28 modules with the power turned on.

- SFP+ MULTI-MODE (LC2148)
- SFP+ SINGLE-MODE (LC2149)
- SFP28 MULTI-MODE (LC2151)
- SFP28 SINGLE-MODE (LC2152)

## 6.4 LTC Signal I/O and Remote Control

The LTC/REMOTE connector on the rear panel is used to input an LTC signal (1 input), output three LTC signals (3 outputs), and perform remote control (alarm output, preset recall).

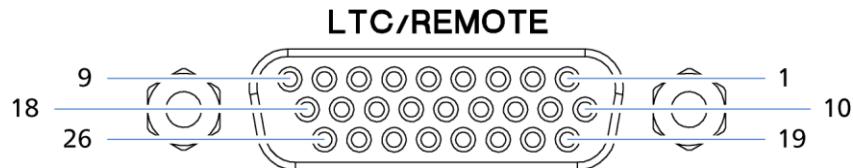

Figure 6-1 | LTC/REMOTE

Table 6-3 | Pinout

| Pin No. | I/O | Pin Name   |
|---------|-----|------------|
| 1       | I   | LTC+       |
| 2       | -   | GND        |
| 3       | O   | LTC1+      |
| 4       | O   | LTC2+      |
| 5       | O   | LTC3+      |
| 6       | -   | GND        |
| 7       | O   | ALARM1     |
| 8       | O   | ALARM2     |
| 9       | -   | RESERVED   |
| 10      | I   | LTC-       |
| 11      | -   | GND        |
| 12      | O   | LTC1-      |
| 13      | O   | LTC2-      |
| 14      | O   | LTC3-      |
| 15      | -   | GND        |
| 16      | -   | RESERVED   |
| 17      | -   | RESERVED   |
| 18      | -   | OPEN       |
| 19      | -   | SHIELD GND |
| 20      | I   | PRESET1    |
| 21      | I   | PRESET2    |
| 22      | I   | PRESET3    |
| 23      | I   | PRESET4    |
| 24      | -   | GND        |
| 25      | -   | RESERVED   |
| 26      | -   | SHIELD GND |

### **LTC Signal Input (1 input)**

---

It is possible to insert time codes received through LTC into the black output, AES/EBU output, and SDI output (SER02/SER04) and output from LTC1 to LTC3.

### **LTC Signal Output (3 Outputs)**

---

Time codes synchronized with the reference time are output from LTC1 to LTC3. You can select the time code type with TIME SOURCE on the REFERENCE CONFIG menu.

### **Alarm Output**

---

When any of the alarms set to ENABLE with ALARM OPTION on the SYSTEM CONFIG menu occurs, the alarm is output from ALARM1 or ALARM2 at the 5V CMOS level. (The polarity can be inverted.)

[See also] "15.8.2 Turning the Alarm Output On and Off"

Table 6-4 | Alarm output

| Alarm               | Alarm Condition  |
|---------------------|--|
| UNIT POWER1         | When an error occurs in POWER1<br>When power supply redundancy is provided and the power is not supplied to POWER1 (SER11)   |
| UNIT POWER2         | When an error occurs in POWER2 (SER11)<br>When power supply redundancy is provided and the power is not supplied to POWER2 (SER11)   |
| FAN POWER1          | When an error occurs in the POWER1 fan   |
| FAN POWER2          | When an error occurs in the POWER2 fan (SER11)   |
| FAN FRONT           | When an error occurs in the front fan unit   |
| FAN REAR            | When an error occurs in the rear fan unit  |
| INT PLL             | When the crystal inside the instrument becomes fault   |
| TIME LAG            | When TIME SOURCE on the REFERENCE CONFIG menu is set to LTC (ST309), VITC (ST309), NTP, or PTP and the time acquired from TIME SOURCE differs from the internal time by more than the value set in TIMELAG SEC |
| REFERENCE NO SIGNAL | When the set reference signal is not received  |
| REFERENCE STAY      | When an error occurs in the reference signal, and stay-in-sync is in operation.  |
| GNSS ANTENNA        | When ANTENNA POWER on the SYSTEM CONFIG menu is set to 3.3V or 5V and a short circuit occurs (SER01)   |

### Recalling Presets

You can use PRESET1 to PRESET4 to recall presets 0 to 9.

Apply L according to the table below.

Table 6-5 | Recalling presets

| Preset Numbers | 23p     | 22p     | 21p     | 20p     |
|----------------|---------|---------|---------|---------|
|                | PRESET4 | PRESET3 | PRESET2 | PRESET1 |
| 0              | H       | H       | H       | L       |
| 1              | H       | H       | L       | H       |
| 2              | H       | H       | L       | L       |
| 3              | H       | L       | H       | H       |
| 4              | H       | L       | H       | L       |
| 5              | H       | L       | L       | H       |
| 6              | H       | L       | L       | L       |
| 7              | L       | H       | H       | H       |
| 8              | L       | H       | H       | L       |
| 9              | L       | H       | L       | H       |

### 6.5 Alarm Display

If an alarm occurs, the ALARM indicator on the front panel lights in red.

To check the description of the alarm, select ALARM from the STATUS menu.

If multiple alarms have occurred, you can use the **◀** and **▶** keys to switch from the description of one alarm to that of another.

For information about the types of alarms displayed, see "16.1 ALARM Menu".

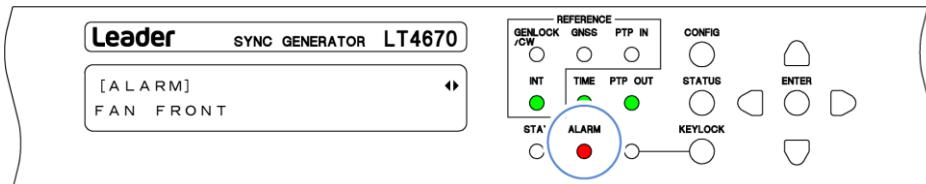

Figure 6-2 | Alarm display

## 6.6 L-SYNC

L-SYNC refers to a function whereby, in a redundant system, the primary and backup instruments, synchronized with the same analog sync signal, can be synchronized in time with each other.

The following explains how to use it, considering the following system as an example.

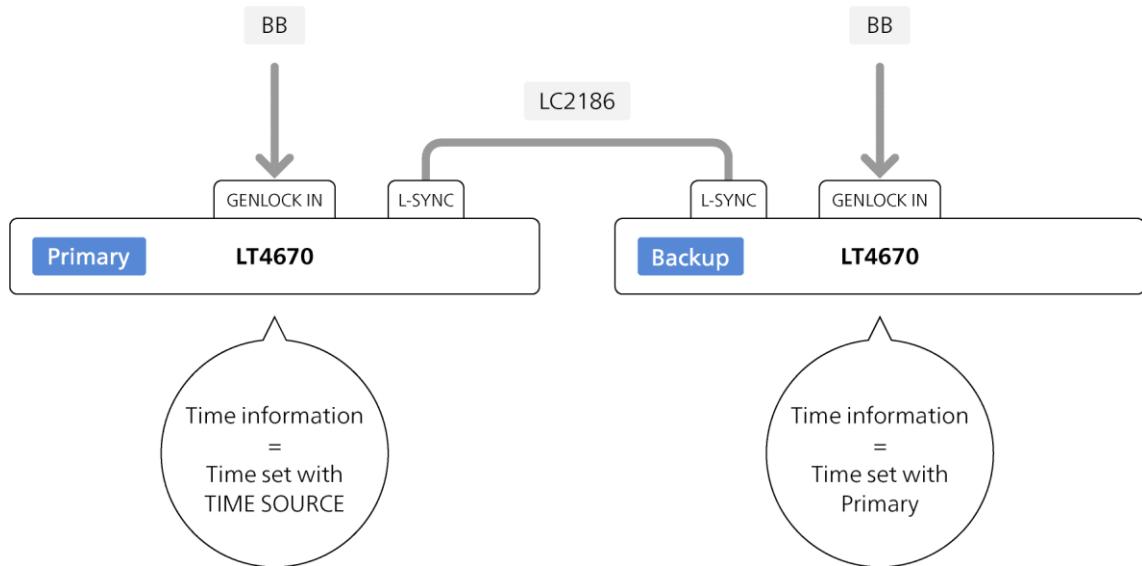

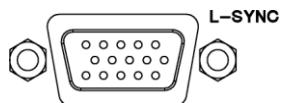

Figure 6-3 | L-SYNC

### 1. Connect the L-SYNC connectors of the LT4670s with an L-SYNC cable.

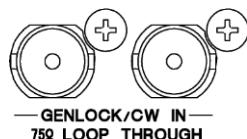

For the L-SYNC cable, use the LC2186 (sold separately).

### 2. Apply an analog sync signal to one of the GENLOCK/CW IN connectors of each of the LT4670 (primary) and the LT4670 (backup).

Apply the same analog sync signal to the primary and backup instruments. Terminate the unused connector of each of the primary and backup instruments at  $75 \Omega$ .

L-SYNC is not supported when the analog sync signal format is 23.98 Hz.

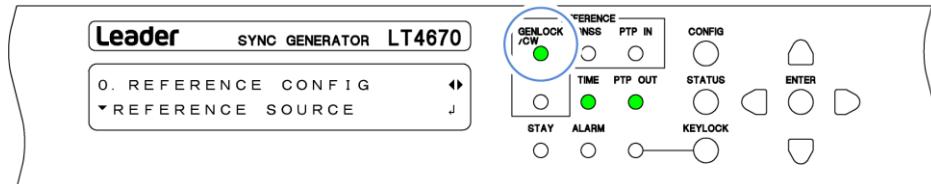

**3. On each of the LT4670 (primary) and the LT4670 (backup), set REFERENCE SOURCE.**

You can set REFERENCE SOURCE with "REFERENCE CONFIG > REFERENCE SOURCE".

Set it to "GENLOCK FMT-AUTO" or "GENLOCK FMT-MANUAL".

|                                     |
|-------------------------------------|
| 1 . R E F E R E N C E   S O U R C E |
| ► * G E N L O C K   F M T - A U T O |

When the operation is performed properly, GENLOCK/CW on the front panel lights in green.

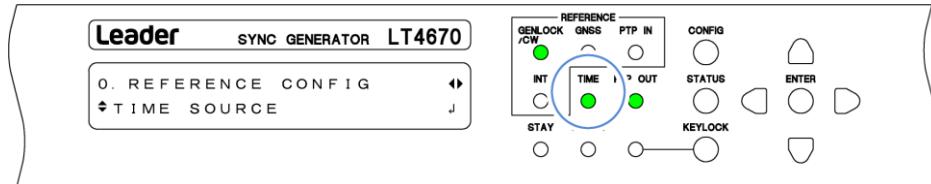

**4. On the LT4670 (primary), set TIME SOURCE.**

You can set TIME SOURCE with "REFERENCE CONFIG > TIME SOURCE". Select one of the options.

The TIME SOURCE setting of the LT4670 (backup) is fixed to INTERNAL by setting L-SYNC SETUP to BACKUP in step 5.

|                           |
|---------------------------|
| 1 . T I M E   S O U R C E |
| ► * I N T E R N A L       |

When the operation is performed properly, TIME on the front panel lights in green.

**5. On each of the LT4670 (primary) and LT4670 (backup), set L-SYNC SETUP.**

You can set L-SYNC SETUP with "SYSTEM CONFIG > TIME MANAGEMENT > L-SYNC SETUP".

For the LT4670 (primary), set it to "PRIMARY".

|                             |
|-----------------------------|
| 2 . L - S Y N C   S E T U P |
| ► * P R I M A R Y           |

For the LT4670 (backup), set it to "BACKUP".

|                             |
|-----------------------------|
| 2 . L - S Y N C   S E T U P |
| ► * B A C K U P             |

Subsequently, the time of LT4670 (backup) will be the same as the time set by the LT4670 (primary). When the time of the LT4670 (primary) changes, the time of the LT4670 (backup) will also change accordingly.

# 7 REFERENCE CONFIG MENU

The REFERENCE CONFIG menu is used to specify settings related to the reference signal and genlock operation.

To display the REFERENCE CONFIG menu, press CONFIG several times until the following menu appears.

## 7.1 Selecting the Reference Signal

To select the reference signal, follow the procedure below.

### Procedure

---

REFERENCE CONFIG > REFERENCE SOURCE

---

### Parameters

---

|                     |   |
|---------------------|---|
| INTERNAL:           | The internal reference signal is used.  |
| GENLOCK FMT-AUTO:   | An external reference signal received through GENLOCK/CW IN on the rear panel is used. The format is automatically identified.  |
| GENLOCK FMT-MANUAL: | An external reference signal received through GENLOCK/CW IN on the rear panel is used. The format should be set manually.   |
| 10MHz CW:           | An external reference signal received through GENLOCK/CW IN on the rear panel is used.  |
| GNSS (SER01):       | An external reference signal received through GNSS IN on the rear panel is used.  |
| PTP1 (SER03):       | An external reference signal received through PTP on the rear panel is used. PTP1 operates as a PTP follower.   |
| PTP2 (SER03):       | An external reference signal received through PTP on the rear panel is used. PTP2 operates as a PTP follower.   |
| PTP1/2 (SER03):     | An external reference signal received through PTP on the rear panel is used.<br>Both PTP1 and PTP2 operate as PTP followers, and the instrument automatically selects the reference signal. You can check the selection result using "STATUS > INFORMATION > REF SRC". "LOCK" is displayed for the reference signal, and "PASSIVE" is displayed for the other signal. |

INTERNAL

---

## 7.2 Selecting the Genlock Format

When REFERENCE SOURCE is set to GENLOCK FMT-MANUAL, to select the genlock format, follow the procedure below. To select an item, use the ▲, ▼, ◀, and ▶ keys.

The genlock formats are expressed in terms of the total number of lines, not the number of effective lines. REF represents the field reference pulse, and ID represents the field ID.

### Procedure

---

REFERENCE CONFIG > GENLOCK FORMAT

---

### Parameters

|            |   |
|------------|---|
| NTSC:      | NTSC BB / NTSC BB+REF / NTSC BB+ID / NTSC BB+REF+ID   |
| PAL:       | PAL BB / PAL BB+REF   |
| COMPONENT: | 525/59.94I / 525/59.94P / 625/50I / 625/50P   |
| 1125:HD:   | 1125/60I / 1125/59.94I / 1125/50I / 1125/30P / 1125/29.97P /<br>1125/25P / 1125/24P / 1125/23.98P / 1125/24PsF /<br>1125/23.98PsF / 1125/60P / 1125/59.94P / 1125/50P |
| 750:HD:    | 750/60P / 750/59.94P / 750/50P / 750/30P / 750/29.97P /<br>750/25P / 750/24P / 750/23.98P   |

---

### Initial value

---

NTSC BB (when FORMAT SETTING on the SYSTEM CONFIG menu is set to NTSC)

PAL BB (when FORMAT SETTING on the SYSTEM CONFIG menu is set to PAL)

---

### 7.3 Setting the Genlock Timing

When REFERENCE SOURCE is set to GENLOCK, you can collectively adjust the timing of the output signals (ANALOG BLACK OUT, 3G SDI OUT, AES/EBU, SILENCE, WCLK, and LTC) relative to the reference signal. (You can also adjust them individually.)

One step is approximately 0.5 ns, which covers a 1-dot cycle.

```
1 . G E N L O C K   T I M I N G   F I N E
    F I N E :      0
```

#### Procedure

---

REFERENCE CONFIG > GENLOCK TIMING FINE

---

#### Parameters

---

±100

---

#### Initial value

---

0

---

### 7.4 Selecting the Satellite (SER01)

When REFERENCE SOURCE is set to GNSS, to select the satellite, follow the procedure below. Leave this set to ALL under standard operating circumstances.

```
1 . G N S S   S A T E L L I T E
    ▶ * A L L
```

#### Procedure

---

REFERENCE CONFIG > GNSS SATELLITE

---

#### Parameters

---

ALL / GPS / GLONASS / GALILEO / BDS / GPS+QZSS

---

#### Initial value

---

ALL

---

## 7.5 Setting the Recovery Operation

Under RECOVERY/TRACKING on the REFERENCE CONFIG menu, you can set the recovery operation that takes place when the reference signal is lost during genlock operation. This menu appears when REFERENCE SOURCE is set to an option other than INTERNAL.

### 7.5.1 Selecting the Recovery Mode

To select the operation to perform when the reference signal recovers after it is lost during genlock operation, follow the procedure below.

#### Procedure

---

REFERENCE CONFIG > RECOVERY/TRACKING > MODE

---

#### Parameters

|         |   |
|---------|---|
| AUTO:   | Relocks onto the reference signal.                                |
| MANUAL: | Stay-in-sync operation is held. Use REFERENCE READJUST to relock. |

---

#### Initial value

---

AUTO

---

### 7.5.2 Selecting the Relock Speed (Auto)

When RECOVERY MODE is set to AUTO, to select the relock speed, follow the procedure below. From the time this instrument is started until the time set with IMMEDIATE MODE TIME elapses, the instrument operates with IMMEDIATE regardless of the selection made here. (This does not apply when REFERENCE SOURCE is set to GNSS.)

#### Procedure

---

REFERENCE CONFIG > RECOVERY/TRACKING > AUTO SETTING

---

#### Parameters

|            |  |
|------------|--|
| IMMEDIATE: | Immediately relocks onto the reference signal. This cannot be selected when REFERENCE SOURCE is set to GNSS. |
| FAST:      | Quickly relocks onto the reference signal.   |
| SLOW:      | Slowly relocks onto the reference signal.  |

---

#### Initial value

---

FAST

---

### 7.5.3 Selecting the Relock Speed (Manual)

When RECOVERY MODE is set to MANUAL, to select the relock speed, follow the procedure below.

From the time this instrument is started until the time set with IMMEDIATE MODE TIME elapses, the instrument operates with IMMEDIATE regardless of the selection made here.

|                                 |
|---------------------------------|
| 2 . M A N U A L   S E T T I N G |
| ◆ * I M M E D I A T E           |

#### Procedure

---

REFERENCE CONFIG > RECOVERY/TRACKING > MANUAL SETTING

---

#### Parameters

|            |  |
|------------|--|
| IMMEDIATE: | Immediately relocks onto the reference signal. |
| FAST:      | Quickly relocks onto the reference signal.     |
| SLOW:      | Slowly relocks onto the reference signal.      |

---

#### Initial value

---

IMMEDIATE

---

### 7.5.4 Power-on Settings

From the time this instrument is started until the set time elapses, the instrument operates with IMMEDIATE regardless of the selection made with AUTO SETTING or MANUAL SETTING.

To set the time for which the instrument operates with IMMEDIATE, follow the procedure below.

|   |
|---|
| 2 . I M M E D I A T E   M O D E   T I M E |
| BO O T - U P :        O F F               |

#### Procedure

---

REFERENCE CONFIG > RECOVERY/TRACKING > IMMEDIATE MODE TIME

---

#### Parameters

---

OFF / 5 - 30 [min]

---

#### Initial value

---

OFF

---

## 7.6 Setting the Relock

When REFERENCE SOURCE is set to an option other than INTERNAL, relock onto the reference signal, select OK by following the procedure below.

|  |
|--|
| 1 . R E F E R E N C E   R E A D J U S T  |
| □ O K                      ■ C A N C E L |

#### Procedure

---

REFERENCE CONFIG > REFERENCE READJUST

---

## 7.7 Selecting the Time Source

To select the time source to use with this instrument, follow the procedure below.

The date and time selected here is used for the log and the time code and for storing to a USB memory device, for example.

```
1 . T I M E   S O U R C E
▶ * I N T E R N A L
```

### Procedure

---

REFERENCE CONFIG > TIME SOURCE

---

### Parameters

INTERNAL / LTC / LTC ST309 / VITC / VITC ST309 / NTP /  
GNSS (SER01) / PTP1 (SER03) / PTP2 (SER03) / PTP1/2 (SER03)

---

### Initial value

---

INTERNAL

---

The selectable TIME SOURCEs depend on the setting of REFERENCE SOURCE as shown below.

Table 7-1 | TIME SOURCE

| REFERENCE SOURCE                               | TIME SOURCE     | Description   |
|--|-----------------|---|
| INTERNAL                                       | INTERNAL        | The internal clock is used.   |
|  | LTC (*1)        | At power-on and when REFERENCE SOURCE or TIME SOURCE is changed, the hours, minutes, and seconds are loaded from TIME SOURCE once and are set in the internal clock. The internal year, month, and day are used.  |
|  | LTC ST309 (*1)  | At power-on and when REFERENCE SOURCE or TIME SOURCE is changed, the year, month, and day, as well as the hours, minutes, and seconds, are loaded from TIME SOURCE and are set in the internal clock.   |
|  | NTP (*2)        |   |
|  | GNSS (SER01)    |   |
|  | PTP1 (SER03)    |   |
| GENLOCK FMT-AUTO<br>GENLOCK FMT-MANUAL<br>(*3) | INTERNAL        | The internal clock is used. The internal clock is counted up in sync with REFERENCE SOURCE.   |
|  | LTC (*1)        | At power-on and when REFERENCE SOURCE or TIME SOURCE is changed, the hours, minutes, and seconds are loaded from TIME SOURCE once and are set in the internal clock. The internal year, month, and day are used. The internal clock is counted up in sync with REFERENCE SOURCE. (*4) |
|  | VITC (*1)       |   |
|  | LTC ST309 (*1)  |   |
|  | VITC ST309 (*1) |   |
|  | NTP (*2)        |   |
|  | GNSS (SER01)    |   |
|  | PTP1 (SER03)    |   |
|  | PTP2 (SER03)    |   |

| REFERENCE SOURCE | TIME SOURCE    | Time information  |
|------------------|----------------|---|
| 10MHz CW         | INTERNAL       | The internal clock is used. The internal clock is counted up in sync with REFERENCE SOURCE.   |
|                  | LTC (*1)       | At power-on and when REFERENCE SOURCE or TIME SOURCE is changed, the hours, minutes, and seconds are loaded from TIME SOURCE once and are set in the internal clock. The internal year, month, and day are used. The internal clock is counted up in sync with REFERENCE SOURCE. (*4) |
|                  | LTC ST309 (*1) | At power-on and when REFERENCE SOURCE or TIME SOURCE is changed, the year, month, and day, as well as the hours, minutes, and seconds, are loaded from TIME SOURCE and are set in the internal clock. The internal clock is counted up in sync with REFERENCE SOURCE. (*4)            |
|                  | NTP (*2)       | At power-on and when REFERENCE SOURCE or TIME SOURCE is changed, the year, month, and day, as well as the hours, minutes, and seconds, are loaded from TIME SOURCE and are set in the internal clock. The internal clock is counted up in sync with REFERENCE SOURCE. (*4)            |
|                  | GNSS (SER01)   | At power-on and when REFERENCE SOURCE or TIME SOURCE is changed, the year, month, and day, as well as the hours, minutes, and seconds, are loaded from TIME SOURCE and are set in the internal clock. The internal clock is counted up in sync with REFERENCE SOURCE. (*4)            |
| GNSS (SER01)     | GNSS           | The time acquired from the satellite is used.   |
| PTP1 (SER03)     | PTP1           | The time received by the PTP follower is used.  |
| PTP2 (SER03)     | PTP2           | The time received by the PTP follower is used.  |
| PTP1/2 (SER03)   | PTP1/2         | The time received by the PTP follower is used.<br>The instrument automatically selects the time source, and you can check the selection result using "STATUS > INFORMATION > REF SRC". "LOCK" is displayed for the time source, and "PASSIVE" is displayed for the other signal.      |

\*1 The input and output frame counts do not match.

\*2 Available when both NETWORK SETUP and NTP SETUP are set to ENABLE in the SYSTEM CONFIG menu.

\*3 TIME SOURCE is fixed to INTERNAL when L-SYNC SETUP in the SYSTEM CONFIG menu is set to BACKUP.

\*4 If REFERENCE SOURCE differs from TIME SOURCE, the internal clock will shift from the TIME SOURCE time.

## 7.8 Setting the Noise Immunity

When REFERENCE SOURCE is set to GENLOCK, to select the noise immunity, follow the procedure below. Normally set to GENERAL.

|  |
|--|
| 1 . S Y N C   D E T E C T  |
| <input checked="" type="checkbox"/> G E N E R A L <input type="checkbox"/> S P E C I F I C |

Procedure

---

REFERENCE CONFIG > SYNC DETECT

---

Parameters

|           |  |
|-----------|--|
| GENERAL:  | Operates with conventional noise immunity.   |
| SPECIFIC: | Operates with improved noise immunity compared to conventional models. This setting is valid only when the genlock format is NTSC BB. (It is invalid when the format is NTSC other than NTSC BB, PAL, COMPONENT, or HD.) |

---

Initial value

---

GENERAL

---

## 7.9 Loading the Date and Time

When REFERENCE SOURCE is locked and the time can be acquired from TIME SOURCE normally, load the time selected with TIME SOURCE, select OK by following the procedure below.

This menu item is not displayed when REFERENCE SOURCE is set to GNSS or PTP.

|  |
|--|
| 1 . T I M E   R E A D J U S T  |
| <input type="checkbox"/> O K <input checked="" type="checkbox"/> C A N C E L |

Procedure

---

REFERENCE CONFIG > TIME READJUST

---

## 7.10 Setting the Time Lag Alarm

Under ALARM TIMELAG on the REFERENCE CONFIG menu, you can specify settings for the time lag alarm.

The time lag alarm occurs when the TIME SOURCE in the REFERENCE CONFIG menu is set to LTC (ST309), VITC (ST309), NTP, or PTP, and the time obtained from the TIME SOURCE differs from the internal time by more than the value set in TIMELAG SEC.

|                                     |   |
|-------------------------------------|---|
| 0 . R E F E R E N C E   C O N F I G | ↔ |
| ▲ A L A R M   T I M E L A G         | ↓ |

### 7.10.1 Turning the Time Lag Alarm On and Off

To turn the time lag alarm detection on and off, follow the procedure below.

When turned on, the TIME indicator on the front panel will flash orange when a time lag alarm occurs. An alarm will also be output from the LTC/REMOTE on the rear panel.

|                                |   |
|--------------------------------|---|
| 2 . T I M E L A G   M O D E    |   |
| <input type="checkbox"/> O F F | <input checked="" type="checkbox"/> O N |

#### Procedure

---

REFERENCE CONFIG > ALARM TIMELAG > MODE

---

#### Initial value

---

ON

---

### 7.10.2 Setting the Time Lag Alarm Time

To set the time considered as a time lag alarm, follow the procedure below.

|                           |  |
|---------------------------|--|
| 2 . T I M E L A G   S E C |  |
| 1 [ sec ]                 |  |

#### Procedure

---

REFERENCE CONFIG > ALARM TIMELAG > SEC

---

#### Parameters

---

1 - 10 [sec]

---

#### Initial value

---

1 [sec]

---

## 8 BLACK CONFIG MENU

The BLACK CONFIG menu is used to specify settings related to the black output.

To display the REFERENCE CONFIG menu, press CONFIG several times until the following menu appears.

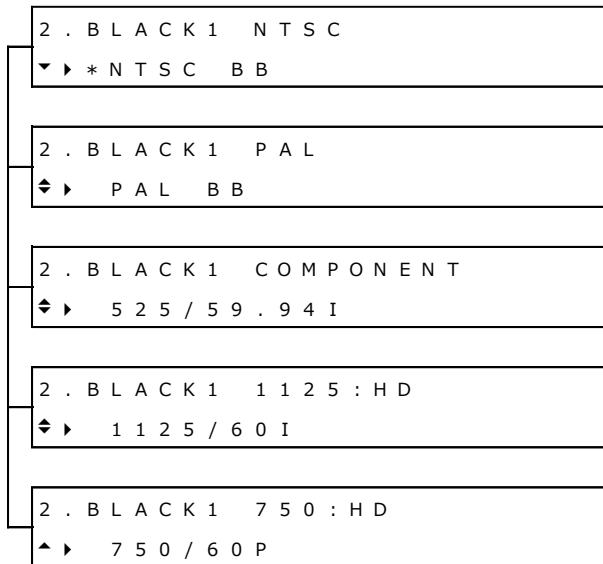

On the BLACK CONFIG menu, you can specify settings for BLACK1 to BLACK6 individually. The procedure below is for BLACK1, but the same procedure can also be applied to BLACK2 to BLACK6.

### 8.1 Selecting the Black Format

To select the black format, follow the procedure below. To select an item, use the ▲, ▼, ◀, and ▶ keys.

The black formats are expressed in terms of the total number of lines, not the number of effective lines. REF and R represent the field reference pulse, ID represents the field ID, and S represents setup.

#### Procedure

---

BLACK CONFIG > BLACK1 > FORMAT

---

#### Parameters

|            |   |
|------------|---|
| NTSC:      | NTSC BB / NTSC BB+REF / NTSC BB+ID / NTSC BB+REF+ID / NTSC BB+SETUP / NTSC BB+S+REF / NTSC BB+S+ID / NTSC BB+S+R+ID   |
| PAL:       | PAL BB / PAL BB+REF   |
| COMPONENT: | 525/59.94I / 525/59.94P / 625/50I / 625/50P   |
| 1125:HD:   | 1125/60I / 1125/59.94I / 1125/50I / 1125/30P / 1125/29.97P / 1125/25P / 1125/24P / 1125/23.98P / 1125/24PsF / 1125/23.98PsF / 1125/60P / 1125/59.94P / 1125/50P |
| 750:HD:    | 750/60P / 750/59.94P / 750/50P / 750/30P / 750/29.97P / 750/25P / 750/24P / 750/23.98P  |

---

---

**Initial value**

NTSC BB (when FORMAT SETTING on the SYSTEM CONFIG menu is set to NTSC)

PAL BB (when FORMAT SETTING on the SYSTEM CONFIG menu is set to PAL)

---

## 8.2 Configuring Timing Data

Under TIMING on the BLACK1 menu, you can adjust the timing of the black output relative to the reference signal.

|                 |
|-----------------|
| 1 . B L A C K 1 |
| ◆ T I M I N G   |

J

---

### 8.2.1 Adjusting the Timing (Frame)

When the black format is set to NTSC or PAL, to adjust the timing of the black output relative to the reference signal at the frame level, follow the procedure below.

|                                     |
|-------------------------------------|
| 3 . B L A C K 1    T I M I N G    F |
| 0    F R A M E                      |

---

**Procedure**

BLACK CONFIG &gt; BLACK1 &gt; TIMING &gt; FRAME

---

**Parameters**

±5 [FRAME] (when FORMAT is set to NTSC)

±2 [FRAME] (when FORMAT is set to PAL)

---

**Initial value**

0 [FRAME]

---

### 8.2.2 Adjusting the Timing (Line)

To adjust the timing of the black output relative to the reference signal at the line level, follow the procedure below.

The variable range varies depending on the black format.

|                                     |
|-------------------------------------|
| 3 . B L A C K 1    T I M I N G    V |
| 0    L I N E                        |

---

**Procedure**

BLACK CONFIG &gt; BLACK1 &gt; TIMING &gt; VERTICAL

---

**Parameters**

±1124 [LINE]

---

**Initial value**

0 [LINE]

### 8.2.3 Adjusting the Timing (Dot)

To adjust the timing of the black output relative to the reference signal at the dot level, follow the procedure below. At the lower right of the screen, the value in dots converted to time is displayed.

The variable range varies depending on the black format.

|                                     |
|-------------------------------------|
| 3 . B L A C K 1    T I M I N G    H |
| 0    D O T            0 . 0 0 0 μ s |

Procedure

---

BLACK CONFIG > BLACK1 > TIMING > HORIZONTAL

---

Parameters

---

±4124 [DOT]

---

Initial value

---

0 [DOT]

---

## 8.3 Setting the Time Code

Under VITC SETTING on the BLACK1 menu, you can specify settings for the time code to insert into the black output.

This menu appears when the black format is set to NTSC or PAL.

|                            |
|----------------------------|
| 1 . B L A C K 1            |
| ◆ V I T C    S E T T I N G |

### 8.3.1 Turning Time Code Insertion On and Off

To turn time code insertion on and off, follow the procedure below.

The time code selected with TIME SOURCE on the REFERENCE CONFIG menu is used.

|   |
|---|
| 3 . B L A C K 1    V I T C                      |
| <input type="checkbox"/> O N            ■ O F F |

Procedure

---

BLACK CONFIG > BLACK1 > VITC SETTING > VITC

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 8.3.2 Setting Dropped Frames

To select the dropped frame setting, follow the procedure below.

This setting is valid when the frame frequency of the black output is set to 59.94 or 29.97.

|   |                                |           |
|---|--------------------------------|-----------|
| 3 . B L A C K 1                         | D R O P                        | F R A M E |
| <input checked="" type="checkbox"/> O N | <input type="checkbox"/> O F F |           |

#### Procedure

---

BLACK CONFIG > BLACK1 > VITC SETTING > DROP FRAME

---

#### Parameters

- |      |                                      |
|------|--------------------------------------|
| ON:  | Dropped frame time code is used.     |
| OFF: | Non-dropped frame time code is used. |
- 

#### Initial value

---

ON

---

### 8.3.3 Setting the Time Code Superimposition Line

To set the line number on which the time code will be superimposed, follow the procedure below.

Set the line number for field 1. The line number in field 2 is displayed in parentheses.

There are some lines that cannot be selected as shown below.

- When the black format is NTSC and REF is included: Line 10 cannot be selected
- When the black format is NTSC and ID is included: Line 15 cannot be selected
- When the black format is PAL BB+REF: Line 7 cannot be selected

|                 |         |             |
|-----------------|---------|-------------|
| 3 . B L A C K 1 | L I N E | N U M B E R |
| 1 4 ( 2 7 7 )   | L I N E |             |

#### Procedure

---

BLACK CONFIG > BLACK1 > VITC SETTING > LINE NUMBER

---

#### Parameters

- |   |
|---|
| 10 - 20 [LINE] (when FORMAT is set to NTSC) |
| 6 - 22 [LINE] (when FORMAT is set to PAL)   |
- 

#### Initial value

- |                                 |
|---------------------------------|
| 14 (when FORMAT is set to NTSC) |
| 19 (when FORMAT is set to PAL)  |
-

## 8.4 Setting the Black Output

Under OUTPUT SETTING on the BLACK1 menu, you can specify settings for the black output.

|                               |
|-------------------------------|
| 1 . B L A C K 1               |
| ▲ O U T P U T   S E T T I N G |
| ↓                             |

### 8.4.1 Turning the Black Output On and Off

To turn the black output on and off, follow the procedure below.

|                                    |
|------------------------------------|
| 3 . B L A C K 1   O U T P U T      |
| ■ E N A B L E      □ D I S A B L E |

Procedure

---

BLACK CONFIG > BLACK1 > OUTPUT SETTING > OUTPUT

---

Parameters

---

ENABLE / DISABLE

---

Initial value

---

ENABLE

---

### 8.4.2 Turning BMCA Linkage On and Off (SER03)

If you set ENABLE in the procedure below, the black output is stopped in linkage with BMCA of the selected PTP. Once the black output is stopped, this menu and the OUTPUT menu are both changed to DISABLE.

To enable the black output again, set the OUTPUT menu to ENABLE.

|   |
|---|
| 3 . B L A C K 1   L I N K E D   T O   P T P 1 |
| □ E N A B L E      ■ D I S A B L E            |

Procedure

---

BLACK CONFIG > BLACK1 > OUTPUT SETTING >  
LINKED TO PTP1 BMCA / LINKED TO PTP2 BMCA

---

Parameters

---

ENABLE / DISABLE

---

Initial value

---

DISABLE

---

## 8.5 Settings Shared by Black Outputs

To specify the settings for BLACK2 to be the same as those for BLACK1, select ON by following the procedure below. In this case, you cannot specify the settings for BLACK2.

Similarly, you can also specify the settings for BLACK3 to BLACK6 to be the same as those for BLACK1.

|  |
|--|
| 2 . B L A C K 2    E Q U A L    T O    B L A C K 1                     |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

### Procedure

---

BLACK CONFIG > BLACK2 > EQUAL TO BLACK1

---

### Parameters

---

ON / OFF

---

### Initial value

---

OFF

---

# 9 AUDIO CONFIG MENU

The AUDIO CONFIG menu is used to specify settings related to the AES/EBU output, silence output, and word-clock output.

To display the AUDIO CONFIG menu, press CONFIG several times until the following menu appears.

## 9.1 Setting the AES/EBU Output

Under AES/EBU on the AUDIO CONFIG menu, you can specify settings for the AES/EBU output.

### 9.1.1 Selecting the Frequency

To select the frequency of the selected channel, follow the procedure below.

#### Procedure

---

AUDIO CONFIG > AES/EBU > SETTING > CH1 / CH2 > FREQ

---

#### Parameters

---

SILENCE / 400Hz / 800Hz / 1kHz

---

#### Initial value

---

1kHz

---

### 9.1.2 Setting the Level

To set the level of the selected channel, follow the procedure below.

#### Procedure

---

AUDIO CONFIG > AES/EBU > SETTING > CH1 / CH2 > LEVEL

---

#### Parameters

---

-60 - 0 [dBFS]

---

#### Initial value

---

-20 [dBFS]

---

### 9.1.3 Setting Clicks

To insert click sounds into the selected channel at the specified interval, follow the procedure below.

This is invalid when LIPSYNC(SYNC TO SDI1) is set to ON and the SDI pattern is a lip sync one.

|   |
|---|
| 4 . A E S / E B U    C H 1    C L I C K |
| ▶ * O F F                               |

Procedure

---

AUDIO CONFIG > AES/EBU > SETTING > CH1 / CH2 > CLICK

---

Parameters

---

OFF / 1sec / 2sec / 4sec

---

Initial value

---

OFF

---

### 9.1.4 Settings Shared by Channels

To specify the settings for CH2 (frequency, level, and click sound) to be the same as those for CH1, select ON by following the procedure below. In this case, you cannot specify the settings for CH2.

|   |
|---|
| 4 . C H 2    E Q U A L    T O    C H 1                    |
| <input type="checkbox"/> O N                      ■ O F F |

Procedure

---

AUDIO CONFIG > AES/EBU > SETTING > CH2 > EQUAL TO CH1

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 9.1.5 Selecting the Resolution

To select the resolution, follow the procedure below.

|  |
|--|
| 3 . A E S / E B U    R E S O L U T I O N |
| ■ 2 0 B I T              □ 2 4 B I T     |

Procedure

---

AUDIO CONFIG > AES/EBU > SETTING > RESOLUTION

---

Parameters

---

20BIT / 24BIT

---

Initial value

---

20BIT

---

### 9.1.6 Selecting the Pre-emphasis Mode

To select the pre-emphasis mode, follow the procedure below.

|   |
|---|
| 3 . A E S / E B U    E M P H A S I S  |
| <input type="checkbox"/> 5 0 / 1 5 <input type="checkbox"/> C C I T T <input checked="" type="checkbox"/> O F F |

Procedure

---

AUDIO CONFIG > AES/EBU > SETTING > EMPHASIS

---

Parameters

---

50/15 / CCITT / OFF

---

Initial value

---

OFF

---

### 9.1.7 Turning Time Code Insertion On and Off

To turn time code insertion on and off, follow the procedure below.

The time code selected with TIME SOURCE on the REFERENCE CONFIG menu is used.

|  |
|--|
| 3 . A E S / E B U    T I M E C O D E                                   |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

Procedure

---

AUDIO CONFIG > AES/EBU > SETTING > TIMECODE

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 9.1.8 Adjusting the Timing

To adjust the timing of the AES/EBU output relative to the reference signal in the range of  $\pm 1$ AES/EBU frame, follow the procedure below.

|                                  |
|----------------------------------|
| 2 . A E S / E B U    T I M I N G |
| 0    [ F S ]                     |

Procedure

---

AUDIO CONFIG > AES/EBU > TIMING

---

Parameters

---

$\pm 511$  [FS]

---

Initial value

---

0 [FS]

---

### 9.1.9 Turning Lip Sync Interlock On and Off (SER02/SER04)

When SDI1 LIP SYNC on the SDI CONFIG menu is set to ON, to output a sound interlocked with the lip sync pattern, select ON by following the procedure below.

[See also] "12.15 Turning Lip Sync On and Off"

|   |   |
|---|---|
| 2 . L I P S Y N C ( S Y N C T O S D I 1 ) |   |
| <input type="checkbox"/> O N              | <input checked="" type="checkbox"/> O F F |

Procedure

---

AUDIO CONFIG > AES/EBU > LIPSYNC(SYNC TO SDI1)

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

## 9.2 Setting the Silence Output

Under SILENCE on the AUDIO CONFIG menu, you can specify settings for the silence output.

|  |  |
|--|--|
| 0 . A U D I O C O N F I G              |  |
| <input type="checkbox"/> S I L E N C E |  |

### 9.2.1 Settings Shared with the AES/EBU Output

To specify the settings for the silence output (resolution and timing) to be the same as those for the AES/EBU output, select ON by following the procedure below. In this case, you cannot specify the settings for the silence output.

|                                 |   |
|---------------------------------|---|
| 2 . E Q U A L T O A E S / E B U |   |
| <input type="checkbox"/> O N    | <input checked="" type="checkbox"/> O F F |

Procedure

---

AUDIO CONFIG > SILENCE > EQUAL TO AES/EBU

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 9.2.2 Selecting the Resolution

To select the resolution, follow the procedure below.

|  |
|--|
| 3 . S I L E N C E   R E S O L U T I O N  |
| <input checked="" type="checkbox"/> 2 0 B I T <input type="checkbox"/> 2 4 B I T |

Procedure

AUDIO CONFIG > SILENCE > SETTING > RESOLUTION

Parameters

20BIT / 24BIT

Initial value

20BIT

### 9.2.3 Adjusting the Timing

To adjust the timing of the silence output relative to the reference signal in the range of ±1AES/EBU frame, follow the procedure below.

|                                 |
|---------------------------------|
| 2 . S I L E N C E   T I M I N G |
| 0      [ F S ]                  |

Procedure

AUDIO CONFIG > SILENCE > TIMING

Parameters

±511 [FS]

Initial value

0 [FS]

## 9.3 Setting the Word-clock Output

Under WCLK on the AUDIO CONFIG menu, you can specify settings for the word-clock output.

### 9.3.1 Adjusting the Timing

To adjust the timing of the word-clock output relative to the reference signal in the range of  $\pm 1$ AES/EBU frame, follow the procedure below.

Procedure

---

AUDIO CONFIG > WCLK > TIMING

---

Parameters

---

$\pm 511$  [FS]

---

Initial value

---

0 [FS]

---

# 10 LTC CONFIG MENU

The LTC CONFIG menu is used to specify settings related to LTC output.

To display the LTC CONFIG menu, press CONFIG several times until the following menu appears.

On the LTC CONFIG menu, you can specify settings for LTC1 to LTC3 individually. The procedure below is for LTC1, but the same procedure can also be applied to LTC2 and LTC3.

## 10.1 Turning the LTC Output On and Off

To turn the LTC output on and off, follow the procedure below.

### Procedure

---

LTC CONFIG > LTC OUTPUT > LTC1 > ON/OFF

---

### Parameters

---

ON / OFF

---

### Initial value

---

OFF

---

## 10.2 Selecting the LTC Format

To select the LTC format, follow the procedure below.

### Procedure

---

LTC CONFIG > LTC OUTPUT > LTC1 > FORMAT

---

### Parameters

---

30 / 29.97 / 25 / 24 / 23.98 fps

---

### Initial value

---

29.97 fps (when FORMAT SETTING on the SYSTEM CONFIG menu is set to NTSC)

25 fps (when FORMAT SETTING on the SYSTEM CONFIG menu is set to PAL)

---

### 10.3 Adjusting the Timing (Frame)

To adjust the timing of the LTC output relative to the reference signal at the frame level, follow the procedure below.

|   |
|---|
| 4 . L T C 1    T I M I N G    F R A M E |
| 0    F R A M E                          |

#### Procedure

---

LTC CONFIG > LTC OUTPUT > LTC1 > TIMING > FRAME

---

#### Parameters

$\pm 29$  [FRAME] (when the LTC format is set to 30 fps or 29.97 fps)

$\pm 24$  [FRAME] (when the LTC format is set to 25 fps)

$\pm 23$  [FRAME] (when the LTC format is set to 24 fps or 23.98 fps)

---

#### Initial value

---

0 [FRAME]

---

### 10.4 Adjusting the Timing (Bit)

To adjust the timing of the LTC output relative to the reference signal at the bit level, follow the procedure below. At the lower right of the screen, the value in bits converted to time is displayed.

|                                     |
|-------------------------------------|
| 4 . L T C 1    T I M I N G    B I T |
| 0    B I T        0 . 0 0 0 m s     |

#### Procedure

---

LTC CONFIG > LTC OUTPUT > LTC1 > TIMING > BIT

---

#### Parameters

---

$\pm 39$  [BIT]

---

#### Initial value

---

0 [BIT]

---

### 10.5 Adjusting the Offset

To adjust the offset of the LTC output relative to the reference signal, follow the procedure below.

|  |
|--|
| 3 . L T C 1    O F F S E T               |
| + 0 0 : 0 0 : 0 0    [ H H : M M : S S ] |

#### Procedure

---

LTC CONFIG > LTC OUTPUT > LTC1 > OFFSET

---

#### Parameters

---

$\pm 23:59:59$

---

#### Initial value

---

+00:00:00

---

## 10.6 Setting Dropped Frames

To select the dropped frame setting, follow the procedure below.

This setting is valid when the frame frequency of the LTC output is set to 29.97.

|   |                                |           |
|---|--------------------------------|-----------|
| 3 . L T C 1                             | D R O P                        | F R A M E |
| <input checked="" type="checkbox"/> O N | <input type="checkbox"/> O F F |           |

Procedure

---

LTC CONFIG > LTC OUTPUT > LTC1 > DROP FRAME

---

Parameters

---

ON: Dropped frame time code is used.

OFF: Non-dropped frame time code is used.

---

Initial value

---

ON

---

## 10.7 Settings Shared by LTC Outputs

To specify the settings for LTC2 to be the same as those for LTC1, select ON by following the procedure below. In this case, you cannot specify the settings for LTC2.

Similarly, you can also specify the settings for LTC3 to be the same as those for LTC1.

|                              |   |     |         |
|------------------------------|---|-----|---------|
| 3 . L T C 2                  | E Q U A L                                 | T O | L T C 1 |
| <input type="checkbox"/> O N | <input checked="" type="checkbox"/> O F F |     |         |

Procedure

---

LTC CONFIG > LTC OUTPUT > LTC2 > EQUAL TO LTC1

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

# 11 CW/1PPS CONFIG MENU

The CW/1PPS CONFIG menu is used to specify settings related to the 10MHz CW output and the 1PPS output.

To display the CW/1PPS CONFIG menu, press CONFIG several times until the following menu appears.

|                                   |
|-----------------------------------|
| 1 . C W / 1 P P S   O U T P U T   |
| ■ C W                   □ 1 P P S |

## 11.1 Switching the Output Signal

To select the signal to output from the CW/1PPS connector on the rear panel, follow the procedure below.

|                                   |
|-----------------------------------|
| 1 . C W / 1 P P S   O U T P U T   |
| ■ C W                   □ 1 P P S |

---

### Procedure

---

CW/1PPS CONFIG > OUTPUT

---

---

### Parameters

---

CW / 1PPS

---

---

### Initial value

---

CW

---

## 12 SDI CONFIG MENU (SER02/SER04)

The SDI CONFIG menu is used to specify settings related to SDI output.

To display the SDI CONFIG menu, press CONFIG several times until the following menu appears.

On the SDI CONFIG menu, you can specify settings for SDI1 to SDI4 individually. The procedure below is for SDI1, but the same procedure can also be applied to SDI2 to SDI4.

The SDI formats corresponding to the options added to the instrument are listed below.

Table 12-1 | SDI format

| Option          | 2K       |    |      |      | 4K           |    |     |
|-----------------|----------|----|------|------|--------------|----|-----|
|                 | SD       | HD | 3G-A | 3G-B | 3G-Quad Link | 6G | 12G |
| SER02           | ●        | ●  | ●    | ●    | -            | -  | -   |
| SER02×2 + SER21 | ●        | ●  | ●    | ●    | ●            | -  | -   |
| SER04 (SDI)     | ●        | ●  | ●    | ●    | ●            | ●  | ●   |
| SER04 (IP)      | ST2110   | -  | ●    | ●    | -            | ●  | ●   |
|                 | ST2022-6 | -  | ●    | ●    | -            | -  | -   |

### When One SER02 Unit is Added

You can specify settings for SDI1 and SDI2. You cannot specify settings for SDI3 or SDI4.

### When Two SER02 Units are Added

You can specify settings for SDI1 to SDI4.

4K 3G-Quad Link can be supported by adding SER21. For the 4K 3G-Quad Link settings, there is only one output, and you cannot specify settings for SDI2 to SDI4.

### When SER04 is Added

You can specify settings for SDI1 to SDI4.

For the 4K 3G-Quad Link settings, there is only one output, and you cannot specify settings for SDI2 to SDI4.

For IP outputs, the patterns specified on the SDI CONFIG menu are output as follows. Up to four streams can be output per port within the band. If the SDI format is set to an unsupported one (indicated by "-" in the table above), IP outputs are unstable.

- IP OUTPUT1/2 Stream1: Output the pattern specified with SDI1
- IP OUTPUT1/2 Stream2: Output the pattern specified with SDI2
- IP OUTPUT1/2 Stream3: Output the pattern specified with SDI3
- IP OUTPUT1/2 Stream4: Output the pattern specified with SDI4

## 12.1 Selecting the Frequency Group

To select the frequency group that can be selected with the frame frequency of the SDI output, follow the procedure below.

The settings specified here are shared among SDI1 to SDI4.

|  |
|--|
| 1 . S D I   F R E Q U E N C Y   G R O U P  |
| <input checked="" type="checkbox"/> 5 9 . 9 4 H z <input type="checkbox"/> 6 0 / 5 0 H z |

### Procedure

---

SDI CONFIG > SDI FREQUENCY GROUP

---

### Parameters

|          |  |
|----------|--|
| 59.94Hz: | Select the frame frequency from 59.94, 29.97, and 23.98. |
| 60/50Hz: | Select the frame frequency from 60, 50, 30, 25, and 24.  |

---

### Initial value

59.94Hz (when FORMAT SETTING on the SYSTEM CONFIG menu is set to NTSC)

60/50Hz (when FORMAT SETTING on the SYSTEM CONFIG menu is set to PAL)

---

- \* When SDI FREQUENCY GROUP is set to 59.94Hz, you cannot select "720x 487 SD (59.94I)". When it is set to 60/50Hz, you can select it.
- \* When SDI format is 4K (SER04/SER21), all frequencies can be selected, regardless of the setting you make here.

## 12.2 Setting the SDI Format

Under FORMAT on the SDI1 menu, you can specify settings for the SDI output format.

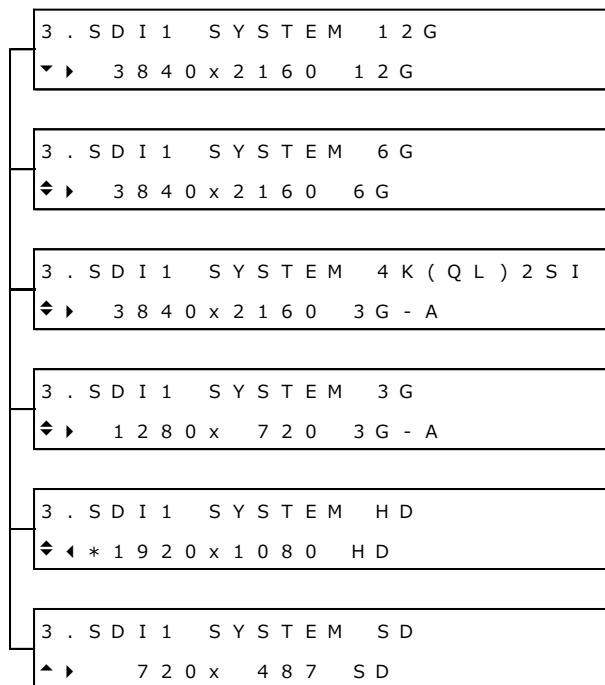

For the available combinations of "SYSTEM", "STRUCTURE", "RATE", see "3.3.3 LT4670-SER02/SER04/SER21 (SDI)".

|               |
|---------------|
| 1 . S D I 1   |
| ◆ F O R M A T |

### 12.2.1 Selecting the System

To select the system of the SDI output, follow the procedure below. To select an item, use the ▲, ▼, ◀, and ▶ key.

Changing this setting also changes the STRUCTURE And RATE settings.

#### Procedure

---

SDI CONFIG > SDI1 > FORMAT > SYSTEM

---

#### Parameters

|            |   |
|------------|---|
| 12G        | 3840x2160 12G / 4096x2160 12G (SER04)<br>SER02 and ST2022-6 of IP outputs are not supported.  |
| 6G         | 3840x2160 6G / 4096x2160 6G (SER04)<br>SER02 and ST2022-6 of IP outputs are not supported.  |
| 4K(QL)2SI: | 3840x2160 3G-A / 4096x2160 3G-A / 3840x2160 3G-B-DL /<br>4096x2160 3G-B-DL (SER21)<br>You cannot select this for SDI2 to SDI4.<br>IP outputs are not supported. |
| 3G:        | 1280x 720 3G-A / 1920x1080 3G-A / 1920x1080 3G-B-DL<br>3G-B does not support IP outputs.  |
| HD:        | 1280x 720 HD / 1920x1080 HD   |
| SD:        | 720x 487 SD / 720x 576 SD<br>You cannot select this when SDI FREQUENCY GROUP is set to<br>59.94Hz.<br>IP outputs are not supported.                             |

---

#### Initial value

---

1920x1080 HD

---

### 12.2.2 Selecting the Color System

To select the color system and the quantization accuracy of the SDI output, follow the procedure below.

Changing this setting also changes the RATE settings.

```
3 . S D I 1   S T R U C T U R E
▶ * 4 2 2 ( Y C b C r ) 1 0 - b i t
```

#### Procedure

---

SDI CONFIG > SDI1 > FORMAT > STRUCTURE

---

#### Parameters

---

422(YCbCr)10-bit / 422(YCbCr)12-bit / 444(RGB)10-bit / 444(RGB)12-bit

---

#### Initial value

---

422(YCbCr)10-bit

---

### 12.2.3 Selecting the Frame Frequency

To select the frame (field) frequency of the SDI output, follow the procedure below.

The selectable frequencies depend on SDI FREQUENCY GROUP.

```
3 . S D I 1   R A T E
◀ * 5 9 . 9 4 I
```

#### Procedure

---

SDI CONFIG > SDI1 > FORMAT > RATE

---

#### Parameters

---

59.94P / 29.97P / 23.98P / 29.97PsF / 23.98PsF / 59.94I

(when SDI FREQUENCY GROUP is set to 59.94Hz)

60P / 50P / 30P / 25P / 24P / 30PsF / 25PsF / 24PsF / 60I / 50I

(when SDI FREQUENCY GROUP is set to 60/50Hz)

48P / 47.95P

---

#### Initial value

---

59.94I (when FORMAT SETTING on the SYSTEM CONFIG menu is set to NTSC)

50I (when FORMAT SETTING on the SYSTEM CONFIG menu is set to PAL)

---

- \* When SDI FREQUENCY GROUP is set to 59.94Hz, you cannot select "720x 487 SD (59.94I)". When it is set to 60/50Hz, you can select it.

- \* When SDI format is 4K (SER04/SER21), all frequencies can be selected, regardless of the setting for SDI FREQUENCY GROUP.

## 12.3 Configuring Timing Data

Under TIMING on the SDI1 menu, you can adjust the timing of the SDI output relative to the reference signal.

|               |
|---------------|
| 1 . S D I 1   |
| ◆ T I M I N G |

### 12.3.1 Selecting the Timing Reference

When the SDI format is set to SD, HD, 6G, or 12G, to select the output timing used as a reference for the SDI and black outputs, follow the procedure below.

When the SDI format is set to 3G, this is fixed to SERIAL.

|  |
|--|
| 3 . S D I 1    0 H    T I M I N G  |
| <input checked="" type="checkbox"/> S E R I A L <input type="checkbox"/> L E G A C Y |

---

#### Procedure

---

SDI CONFIG > SDI1 > TIMING > 0H TIMING

---

---

#### Parameters

|         |   |
|---------|---|
| SERIAL: | Signals are output at the timing defined in the signal standard.                  |
| LEGACY: | Signals are output at the same timing as LEADER's conventional signal generators. |

---

---

#### Initial value

---

SERIAL

---

### 12.3.2 Adjusting the Timing (Line)

To adjust the timing of the SDI output relative to the reference signal at the line level, follow the procedure below.

The variable range varies depending on the SDI format.

This is invalid when the SDI format is 4K 3G-Quad Link (SER04/SER21).

|                                 |
|---------------------------------|
| 3 . S D I 1    T I M I N G    V |
| 0    L I N E                    |

---

#### Procedure

---

SDI CONFIG > SDI1 > TIMING > VERTICAL

---

---

#### Parameters

---

±1124 [LINE]

---

---

#### Initial value

---

0 [LINE]

---

### 12.3.3 Adjusting the Timing (Dot)

To adjust the timing of the SDI output relative to the reference signal at the dot level, follow the procedure below. At the lower right of the screen, the value in dots converted to time is displayed.

The variable range varies depending on the SDI format.

This is invalid when the SDI format is 4K 3G-Quad Link (SER04/SER21).

|                                     |
|-------------------------------------|
| 3 . S D I 1    T I M I N G    H     |
| 0    D O T            0 . 0 0 0 μ s |

Procedure

---

SDI CONFIG > SDI1 > TIMING > HORIZONTAL

---

Parameters

---

±4124 [DOT]

---

Initial value

---

0 [DOT]

---

## 12.4 Configuring Fixed Patterns

There are two types of SDI output patterns: internal fixed patterns within the instrument and user patterns, which display images that the user prepares. This section describes fixed patterns.

To select the fixed patterns, follow the procedure below. To select an item, use the ▲, ▼, ◀, and ▶ key.

Procedure

---

SDI CONFIG > SDI1 > PATTERN > PATTERN SELECT > FIX PATTERN

---

Parameters

COLOR BAR:                          100% / 75% / MULTI 100% / MULTI 75% / MULTI (+I) / ARIB STD-B66-2 / HLGCB / S-LOG3 / SMPTE / EBU / BBC

MONITOR:                              FLAT FIELD 100% / FLAT FIELD 50% / FLAT FIELD 0% / RED FIELD 100% / GREEN FIELD 100% / BLUE FIELD 100%

SDI:                                    CHECK FIELD

---

Initial value

---

100%

---

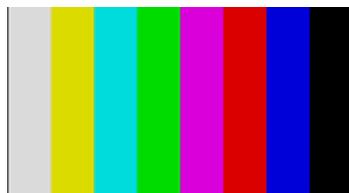

The selectable patterns depend on the SDI format as shown below.

(○: Selectable, ×: Not selectable)

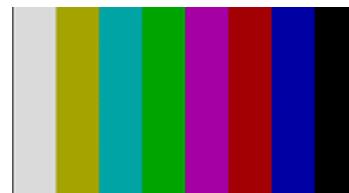

Table 12-2 | FIX PATTERN

| Pattern   |                | SDI Format             |          |    |   |
|-----------|----------------|------------------------|----------|----|---|
|           |                | 12G<br>6G<br>4K(QL)2SI | 3G<br>HD | SD |   |
| COLOR BAR | 100%           | ○                      | ○        | ○  | ○ |

Figure 12-1 | Selecting the pattern

## 12.5 Configuring User Patterns

There are two types of SDI output patterns: internal fixed patterns within the instrument and user patterns, which display images that the user prepares. This section describes user patterns.

### 12.5.1 Displaying a User Pattern

Here is an overview of the procedure from preparing a user pattern to displaying it.

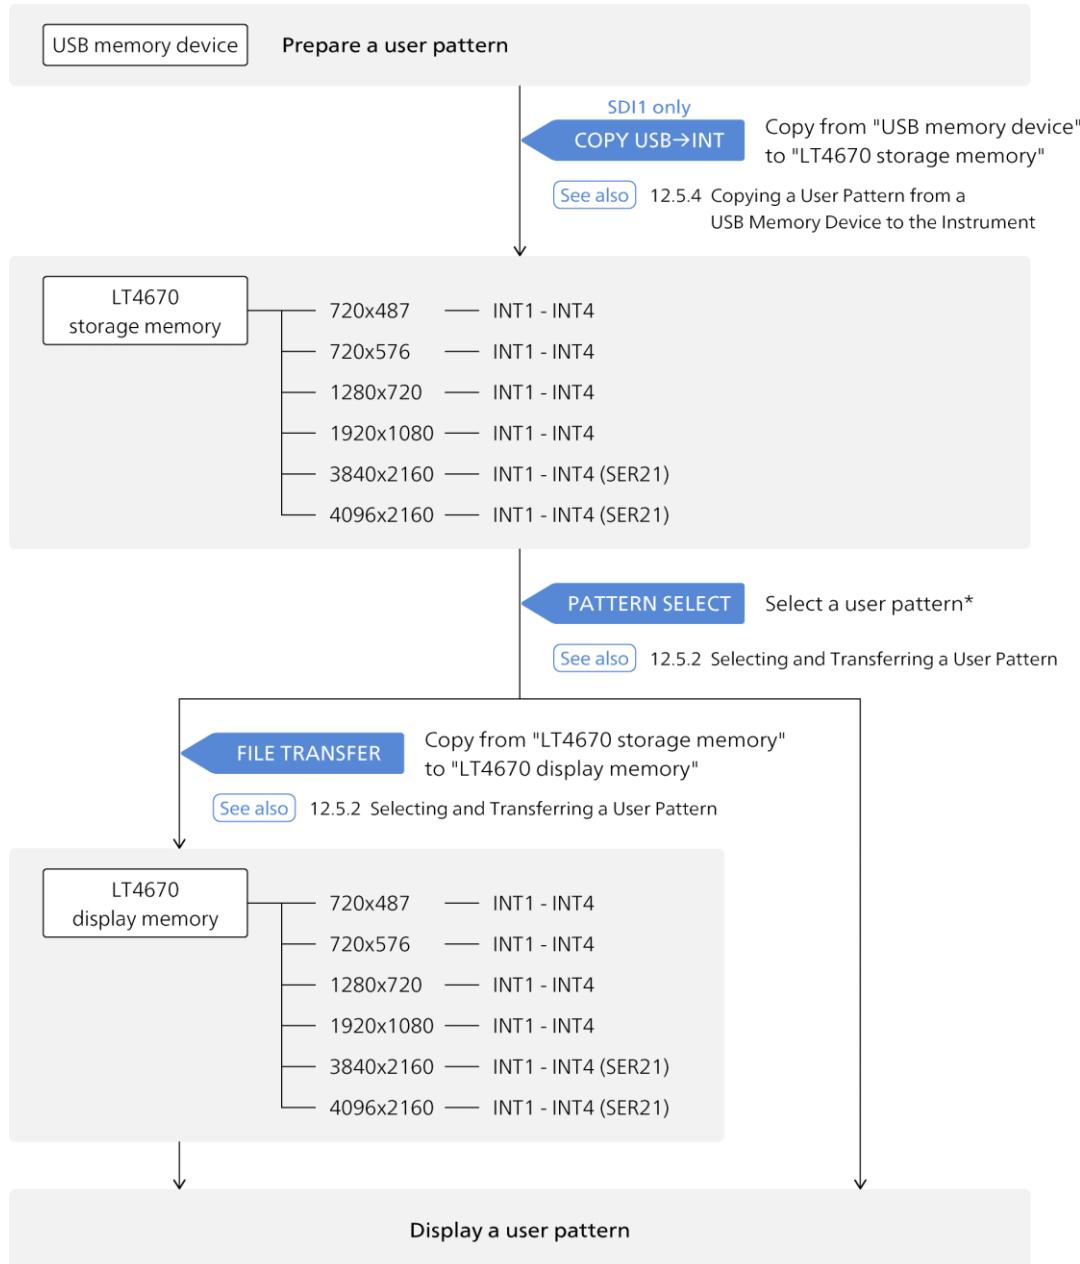

Figure 12-2 | Displaying a user pattern

\* If the selected user pattern has been transferred, you can display the user pattern at the time you select it.

If it has not been transferred, you can display it after transferring it to the LT4670 display memory. Once transferred, it will remain effective until you turn off the power.

The detailed procedure from preparing a user pattern to displaying it are as follows:

### **1. Prepare a user pattern.**

Prepare an image in bitmap format or TIFF format according to the following conditions.

Select one of the image sizes according to the output SDI format.

Here, as an example, a user pattern is prepared with the file name "leader.bmp" and an image size of "1920x1080".

File name: Up to 64 alphanumeric characters or underscore

File format: 24-bit bitmap format (.bmp)

24/48-bit TIFF format (.tif)

Image size: 720x487 (SD)

720x576 (SD)

1280x720 (HD, 3G)

1920x1080 (HD, 3G)

3840x2160 (4K)

4096x2160 (4K)

\* The extension ".tiff" is not supported.

\* Compressed TIFF is not supported.

### **2. Save the user pattern to a USB memory device.**

Set up the folder structure on the USB memory device as follows and save the user pattern to the 1920\_1080 folder.

- USB memory device
  - └ ■ LT4670\_USER
    - └ ■ USER\_PATTERN
      - └ ■ 1920\_1080
        - └ ■ leader.bmp

### **3. Connect the USB memory device to the instrument.**

**4. Using the COPY USB→INT menu, copy the user pattern from the USB memory device to the LT4670 storage memory.**

For each image size, you can copy up to four user patterns (INT1 to INT4) to the instrument. The user pattern copies will be common to SDI1 to SDI4.

Here, as an example, "leader.bmp" is copied from a USB memory device to "INT1" on the instrument.

This menu appears only for SDI1 when a USB memory device is connected and contains an image size folder (folder with a name from an image size).

From "SDI CONFIG > SDI1 > PATTERN > COPY USB→INT", select an image size.

|   |
|---|
| 3 . S D I 1    C O P Y    U S B → I N T |
| ► 1 9 2 0 x 1 0 8 0                     |

Select the copy source in the USB memory device.

|  |
|--|
| 4 . C O P Y    U S B → I N T                         |
| ► l e a d e r . b m p                          1 / 1 |

Select a copy destination from INT1 to INT4. If there are already user patterns stored in the instrument, they will be overwritten.

|   |
|---|
| 5 . C O P Y    U S B → I N T                              |

| ■ S D R <input type="checkbox"/> H L G <input type="checkbox"/> P Q <input type="checkbox"/> U n s p c |

[See also] "12.5.4 Copying a User Pattern from a USB Memory Device to the Instrument"

**5. On the PATTERN SELECT menu, select the user pattern.**

From "SDI CONFIG > SDI1 > PATTERN > PATTERN SELECT > USER PATTERN", select INT1.

Here, user patterns appear according to the current image size. If user patterns do not appear, select 1920x1080 from "SDI CONFIG > SDI1 > FORMAT > SYSTEM".

If the selected user pattern has been transferred, the user pattern appears at this time, but to make it appear for the first time after you turn on the power, the transfer described later is necessary.

|  |
|--|
| 4 . U S E R   P A T   1   7 0 9   N R   S D R                              |
| ► * I N T 1    l e a d e r . b m p |

[See also] "12.5.2 Selecting and Transferring a User Pattern"

**6. On the FILE TRANSFER menu, transfer the user pattern from the LT4670 storage memory to the LT4670 display memory.**

Press the ENTER key with the \* symbol attached in step 5, and "FILE TRANSFER" will appear.

Select OK.

|  |
|--|
| 5 . F I L E   T R A N S F E R                                  |
| ■ O K    □ C A N C E L |

When you select OK, the user pattern is transferred to the LT4670 display memory. Wait until it is completed.

|                           |
|---------------------------|
| F I L E   T R A N S F E R |
| P L E A S E   W A I T .   |

Set POWER ON LOAD. When you select either option, the user pattern appears.

If you select YES, the pattern will be transferred to the LT4670 display memory when you restart the instrument. This eliminates the need to transfer the user pattern each time you turn the instrument on and off, but may take extra time when you turn on the power.

If you select NO, the user pattern will not be transferred to the LT4670 display memory when you restart the instrument. This does not take extra time when you turn on the power, but requires you to transfer the user pattern each time you turn the instrument on and off.

|  |
|--|
| 6 . P O W E R   O N   L O A D                    |
| □ Y E S                                    ■ N O |

[See also] "12.5.2 Selecting and Transferring a User Pattern"

### 12.5.2 Selecting and Transferring a User Pattern

To display a user pattern, the user pattern, stored on the LT4670 storage memory, must be transferred to the LT4670 display memory.

To select and transfer a user pattern, follow the procedure below.

The user pattern must be copied to INT1 to INT4 in advance using the COPY USB→INT menu.

#### Procedure

---

SDI CONFIG > SDI1 > PATTERN > PATTERN SELECT > USER PATTERN

---

#### Parameters

---

INT1 - INT4

---

#### Initial value

---

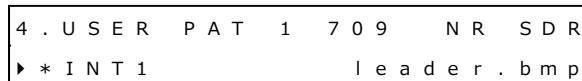

INT1

---

To select and transfer a user pattern, follow the procedure below.

#### 1. Select a user pattern.

Select from INT1 to INT4. Here, user patterns appear according to the current image size. The colorimetry, range, and HDR standard appear in the upper right of the menu.

If the selected user pattern has been transferred, the user pattern appears at this time. Once transferred, the user pattern will remain effective until you turn off the power, but must be re-transferred when you restart the instrument. Note, however, that if you set "POWER ON LOAD" to YES when transferring it, you need not re-transfer it even after you restart the instrument.

If the selected user pattern has not been transferred, nothing appears at this time. Go to step 2.

#### 2. Press the ENTER key.

Press the ENTER key with the \* symbol attached in step 1, and "FILE TRANSFER" will appear.

#### 3. Select OK.

When you select OK, the user pattern is transferred to the LT4670 display memory. Wait until it is completed.

#### 4. Set POWER ON LOAD.

When you select either option, the user pattern appears.

If you select YES, the pattern will be transferred to the LT4670 display memory when you restart the instrument. This eliminates the need to transfer the user pattern each time you turn the instrument on and off, but may take extra time when you turn on the power.

If you select NO, the user pattern will not be transferred to the LT4670 display memory when you restart the instrument. This does not take extra time when you turn on the power, but requires you to transfer the user pattern each time you turn the instrument on and off.

|                                |   |
|--------------------------------|---|
| 6 . P O W E R   O N   L O A D  |   |
| <input type="checkbox"/> Y E S | <input checked="" type="checkbox"/> N O |

#### 12.5.3 Clearing a User Pattern

To clear a user pattern saved in the instrument, follow the procedure below.

This menu appears only for SDI1.

##### Procedure

---

SDI CONFIG > SDI1 > PATTERN > DELETE

---

To clear a user pattern, follow the procedure below.

##### 1. Select the image size of the user pattern you want to clear.

Select from 720x487, 720x576, 1280x720, 1920x1080, 3840x2160, and 4096x2160.

|  |   |
|--|---|
| 3 . D E L E T E   P A T T E R N            |   |
| <input type="checkbox"/> 1 9 2 0 x 1 0 8 0 | J |

##### 2. Select the user pattern you want to clear.

Select from INT1 to INT4.

|   |                     |
|---|---------------------|
| 4 . D E L E T E   P A T T E R N             |                     |
| <input checked="" type="checkbox"/> I N T 1 | I e a d e r . b m p |

##### 3. Select OK.

If you clear the currently displayed user pattern, the user pattern will continue to appear even after you select OK. By switching the output pattern, you can no longer display it again.

|   |                                      |
|---|--------------------------------------|
| 5 . D E L E T E   P A T T E R N         |                                      |
| <input checked="" type="checkbox"/> O K | <input type="checkbox"/> C A N C E L |

#### 12.5.4 Copying a User Pattern from a USB Memory Device to the Instrument

To copy up to four user patterns, for each image size, from a USB memory device to the LT4670 storage memory, follow the procedure below. The user pattern copies will be common to SDI1 to SDI4. (Copy the user pattern to the USB memory device in advance using the COPY INT→USB menu or create and place the user pattern.)

This menu appears only for SDI1 when a USB memory device is connected and contains an image size folder.

##### Procedure

---

SDI CONFIG > SDI1 > PATTERN > COPY USB→INT

---

To copy a user pattern, follow the procedure below.

**1. Select the image size of the user pattern you want to copy.**

Select from 720x487, 720x576, 1280x720, 1920x1080, 3840x2160, and 4096x2160.

|   |
|---|
| 3 . S D I 1    C O P Y    U S B → I N T |
| ► 1 9 2 0 x 1 0 8 0                     |

**2. Select the copy source in the USB memory device.**

The bmp or tif files in the image size folder of the USB memory device are displayed here.

|  |
|--|
| 4 . C O P Y    U S B → I N T                         |
| ► l e a d e r . b m p                          1 / 1 |

**3. Select the copy destination in the instrument.**

Select from INT1 to INT4. If there are already user patterns stored in the instrument, they will be overwritten.

|  |
|--|
| 5 . C O P Y    U S B → I N T                                     |
| ► I N T 1                                         N O    D A T A |

**4. Select the colorimetry.**

|  |
|--|
| 6 . C O L O R I M E T R Y  |
| <input type="checkbox"/> 6 0 1      ■ 7 0 9 <input type="checkbox"/> 2 0 2 0 |

**5. Select the range.**

|  |
|--|
| 7 . R A N G E                                  |
| ■ N A R R O W <input type="checkbox"/> F U L L |

## 6. Select the HDR standard.

Unspc represents undefined.

When you select the HDR standard, the user pattern is copied to the LT4670 storage memory.

|  |
|--|
| 8 . H D R  |
| <input checked="" type="checkbox"/> S D R <input type="checkbox"/> H L G <input type="checkbox"/> P Q <input type="checkbox"/> U n s p c |

### ● USB Memory Device Structure

User patterns are copied from the image size folder of the USB memory device.

To prepare a user pattern, set the image size as follows:

- USB memory device
- └ ■ LT4670\_USER
  - └ ■ USER\_PATTERN
    - └ ■ 720\_487
      - |  └ ■ \*\*\*\*.tif ..... 720×487 tif file
      - |  └ ■ \*\*\*\*.bmp ..... 720×487 bmp file
    - └ ■ 720\_576
      - |  └ ■ \*\*\*\*.tif ..... 720×576 tif file
      - |  └ ■ \*\*\*\*.bmp ..... 720×576 bmp file
    - └ ■ 1280\_720
      - |  └ ■ \*\*\*\*.tif ..... 1280×720 tif file
      - |  └ ■ \*\*\*\*.bmp ..... 1280×720 bmp file
    - └ ■ 1920\_1080
      - |  └ ■ \*\*\*\*.tif ..... 1920×1080 tif file
      - |  └ ■ \*\*\*\*.bmp ..... 1920×1080 bmp file
    - └ ■ 3840\_2160
      - |  └ ■ \*\*\*\*.tif ..... 3840×2160 tif file (SER21)
      - |  └ ■ \*\*\*\*.bmp ..... 3840×2160 bmp file (SER21)
    - └ ■ 4096\_2160
      - |  └ ■ \*\*\*\*.tif ..... 4096×2160 tif file (SER21)
      - |  └ ■ \*\*\*\*.bmp ..... 4096×2160 bmp file (SER21)

### 12.5.5 Copying a User Pattern from the Instrument to a USB Memory Device

To copy a user pattern from the LT4670 storage memory to a USB memory device, follow the procedure below. (Copy the user pattern to the instrument in advance using the COPY USB→INT menu.)

This menu appears only for SDI1 when a USB memory device is connected.

#### Procedure

---

SDI CONFIG > SDI1 > PATTERN > COPY INT→USB

---

To copy a user pattern, follow the procedure below.

**1. Select the image size of the user pattern you want to copy.**

Select from 720x487, 720x576, 1280x720, 1920x1080, 3840x2160, and 4096x2160.

|   |
|---|
| 3 . S D I 1    C O P Y    I N T → U S B |
| ► 1 9 2 0 x 1 0 8 0                     |

**2. Select the copy source in the instrument.**

Select from INT1 to INT4.

|  |
|--|
| 4 . C O P Y    I N T → U S B             |
| ► I N T 1            l e a d e r . b m p |

**3. Select OK.**

If there are already user patterns with the same file names stored in the USB memory device, they will be overwritten.

|                                    |
|------------------------------------|
| 5 . C O P Y    I N T → U S B       |
| ■ O K                □ C A N C E L |

---

## 12.7 Turning Safety Area Markers On and Off

To turn each safety area marker on and off, follow the procedure below.

If the 4:3 marker is off, the 90% marker and 80% marker are displayed at the outer frame of the picture. If it is on, the 4:3 marker is assumed to be 100%.

When the SDI format is set to SD, the 4:3 marker cannot be set. Moreover, this is invalid when the pattern is check field.

|                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|

## 12.8 Configuring the Pattern Scroll Feature

Under SCROLL on the VIDEO menu, you can configure the pattern scroll feature. This is invalid when the pattern is check field.

|                          |
|--------------------------|
| 2 . S D I 1    V I D E O |
| ◆ S C R O L L            |

### 12.8.1 Turning Scrolling On and Off

To turn scrolling on and off, follow the procedure shown below.

|   |
|---|
| 4 . S D I 1    S C R O L L                                |
| <input type="checkbox"/> O N                      ■ O F F |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > SCROLL > ON/OFF

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 12.8.2 Setting the Scroll Speed (Vertical)

To set the vertical scroll speed and direction, follow the procedure below.

The unit is line/field (frame). Setting a positive value scrolls upward and a negative value downward. When the SDI format is set to 4K (SER04/SER21), set them in 2-line steps.

|   |
|---|
| 4 . S D I 1    S C R O L L    V - S P E E D |
| 0    [ L I N E ]                            |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > SCROLL > V-SPEED

---

Parameters

---

±256 [LINE]

---

Initial value

---

0 [LINE]

---

### 12.8.3 Setting the Scroll Speed (Horizontal)

To set the horizontal scroll speed and direction, follow the procedure below.

The unit is dot/field (frame). Setting a positive value scrolls from left to right and a negative value from right to left. Usually, set them in 2-dot steps. When the SDI format is set to 4K (SER04/SER21), set them in 4-dot steps.

|   |
|---|
| 4 . S D I 1    S C R O L L    H - S P E E D |
| 0    [ D O T ]                              |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > SCROLL > H-SPEED

---

Parameters

---

±256 [DOT]

---

Initial value

---

0 [DOT]

---

### 12.9 Setting the Pattern Change

Under PATTERN CHANGE on the VIDEO menu, you can set the pattern change.

This is invalid when the pattern is check field. This menu does not appear when a user pattern is selected.

|                                |
|--------------------------------|
| 2 . S D I 1    V I D E O       |
| ◆ P A T T E R N    C H A N G E |

#### 12.9.1 Turning Pattern Change On and Off

To turn pattern change on and off, follow the procedure shown below.

If set to ON, the pattern is switched automatically between the available color bar patterns for the current format.

|   |
|---|
| 4 . S D I 1    P A T T E R N    C H A N G E       |
| <input type="checkbox"/> O N              ■ O F F |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > PATTERN CHANGE > ON/OFF

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 12.9.2 Setting the Change Interval

To select the pattern change interval, follow the procedure below.

|               |               |       |           |
|---------------|---------------|-------|-----------|
| 4 . S D I 1   | P A T T E R N | C H G | S P E E D |
| + 1 [ S E C ] |               |       |           |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > PATTERN CHANGE > SPEED

---

Parameters

---

+1 - +255 [SEC]

---

Initial value

---

+1 [SEC]

---

### 12.10 Setting ID Characters

Under ID CHARACTER on the VIDEO menu, you can set ID characters.

A character string that you created on the instrument can be displayed in a pattern.

This is invalid when the pattern is check field.

|             |                   |
|-------------|-------------------|
| 2 . S D I 1 | V I D E O         |
| ◆ I D       | C H A R A C T E R |

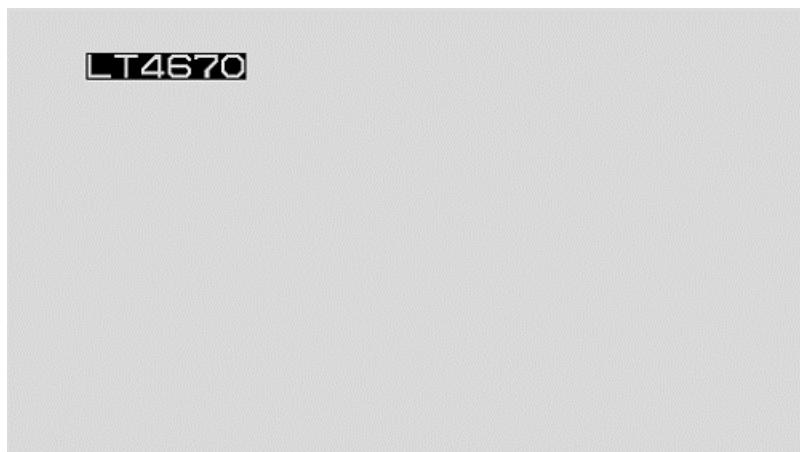

Figure 12-4 | Setting ID characters

### 12.10.1 Turning ID Characters On and Off

To turn ID characters on and off, follow the procedure below.

|   |
|---|
| 4 . S D I 1    I D    C H A R A C T E R                           |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > ON/OFF

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 12.10.2 Recalling ID Characters

To recall and display ID characters that have been saved in the instrument using the STORE menu, follow the procedure below.

|   |
|---|
| 4 . S D I 1    I D    R E C A L L                     |
| ► N O    D A T A                              I N T 1 |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > RECALL

---

Parameters

---

INT1 - INT4

---

### 12.10.3 Creating ID Characters

To create ID characters, follow the procedure below. You can enter up to 20 characters.

The ID character background is displayed in black for 20 characters worth. If you enter ▲ at the end of the ID character string, only the background of the entered characters will be displayed. (▲ is not displayed.)

If you enter ▲ in the middle of the ID character string, characters after this character will disappear, and you will not be able to edit them.

|                             |

#### 12.10.4 Setting the Position of ID Characters (Vertical)

To set the vertical position of ID characters, follow the procedure below.

The value represents the position of the top of the ID characters. The top of the pattern is 0%.

|                                   |
|-----------------------------------|
| 4 . S D I 1    I D    V - P O S I |
| 0    [ % ]                        |

##### Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > V-POSI

---

##### Parameters

---

0 - 100 [%]

---

##### Initial value

---

0 [%]

---

#### 12.10.5 Setting the Position of ID Characters (Horizontal)

To set the horizontal position of ID characters, follow the procedure below.

The value represents the position of the left end of the ID characters. The left end of the pattern is 0%.

|                                   |
|-----------------------------------|
| 4 . S D I 1    I D    H - P O S I |
| 0    [ % ]                        |

##### Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > H-POSI

---

##### Parameters

---

0 - 100 [%]

---

##### Initial value

---

0 [%]

---

### 12.10.6 Selecting the Size of ID Characters

To set the size of ID characters, follow the procedure below.

The size of x1 is 32×32 dot/character.

|  |
|--|
| 4 . S D I 1    I D    S I Z E  |
| <input checked="" type="checkbox"/> x 1 <input type="checkbox"/> x 2 <input type="checkbox"/> x 4 <input type="checkbox"/> x 8 |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > SIZE

---

Parameters

---

x1 / x2 / x4 / x8

---

Initial value

---

x1

---

### 12.10.7 Selecting the Level of ID Characters

To set the intensity level of ID characters, follow the procedure below.

|  |
|--|
| 4 . S D I 1    I D    L E V E L  |
| <input checked="" type="checkbox"/> 1 0 0 % <input type="checkbox"/> 7 5 % |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > LEVEL

---

Parameters

---

100% / 75%

---

Initial value

---

100%

---

### 12.10.8 Turning ID Character Blinking On and Off

To turn ID character blinking on and off, follow the procedure below.

|  |
|--|
| 5 . S D I 1    I D    B L I N K  |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > BLINK > ON/OFF

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 12.10.9 Setting the ID Character On-Time

To set the on-time of ID character blinking, follow the procedure below.

|   |
|---|
| 5 . S D I 1    I D    B L I N K    O N    T I M E |
| 1    [ S E C ]                                    |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > BLINK > ON TIME

---

Parameters

---

1 - 9 [SEC]

---

Initial value

---

1 [SEC]

---

### 12.10.10 Setting the ID Character Off-Time

To set the off-time of ID character blinking, follow the procedure below.

|   |
|---|
| 5 . S D I 1    I D    B L I N K    O F F    T I M E |
| 1    [ S E C ]                                      |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > BLINK > OFF TIME

---

Parameters

---

1 - 9 [SEC]

---

Initial value

---

1 [SEC]

---

### 12.10.11 Turning ID Character Scrolling On and Off

To turn ID character scrolling on and off, follow the procedure below.

If set to ON, the ID characters scroll horizontally over the pattern.

|   |
|---|
| 5 . S D I 1    I D    S C R O L L                         |
| <input type="checkbox"/> O N                      ■ O F F |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > SCROLL > ON/OFF

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 12.10.12 Setting ID Character Scroll Speed

To set the ID character scroll speed and direction, follow the procedure below.

The unit is dot/field (frame). Setting a positive value scrolls from left to right and a negative value from right to left. Usually, set them in 2-dot steps. When the SDI format is set to 4K (SER04/SER21), set them in 4-dot steps.

|  |
|--|
| 5 . S D I 1    I D    S C R O L L    S P E E D |
| 0    [ D O T ]                                 |

#### Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > SCROLL > SPEED

---

#### Parameters

---

±256 [DOT]

---

#### Initial value

---

0 [DOT]

---

### 12.10.13 Turning ID Character Background Transparency On and Off

To select whether to make the ID character background transparent, follow the procedure below.

|  |
|--|
| 4 . S D I 1    I D    T R A N S P A R E N C Y                          |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

#### Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > TRANSPARENCY

---

#### Parameters

---

ON / OFF

---

#### Initial value

---

OFF

---

TRANSPARENCY = ON

TRANSPARENCY = OFF

Figure 12-6 | Turning ID character background transparency on and off

## 12.10.14 Saving ID Characters

To store up to four sets of ID characters that you create on the SET menu, follow the procedure below.

Only the characters are saved. Position, size, and the like are not saved.

## Procedure

## SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > STORE

To save ID characters, follow the procedure below.

## 1. Enter a file name.

Select "STORE" to display the file name input menu. This is the name assigned to the ID characters and is also the file name when the ID characters are copied to a USB memory device.

The characters that you can use are as follows. Up to eight characters can be entered.

◀ 0 1 2 3 4 5 6 7 8 9 A B C D E F G H I J K L M N O P Q R S T U V W X Y Z ▶

Enter ◀ to clear the characters that follow it. In this case, ◀ is not included in the file name.

4 . S D I 1    I D    S T O R E  
L T 4 6 7 0 ↲

## **2. Select the save destination in the instrument.**

Select from INT1 to INT4. If there are already ID characters stored at the destination, they are overwritten.

### **3. Select OK.**

### 12.10.15 Copying ID Characters from a USB Memory Device to the Instrument

To copy up to four sets of ID characters from a USB memory device to the instrument, follow the procedure below. This feature is useful when you want to use multiple instruments with the same settings. (Copy the ID characters to the USB memory device in advance by using the COPY INT→USB menu.)

This setting appears when a USB memory device is connected.

#### Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > COPY USB→INT

---

To copy ID characters, follow the procedure below.

#### 1. Select the copy destination in the instrument.

Select from INT1 to INT4. If there are already ID characters stored in the instrument, they are overwritten.

|   |
|---|
| 4 . S D I 1    I D    C O P Y    U S B → I N T                        |
| ► N O    D A T A    I N T 1 |

#### 2. Select the copy source in the USB memory device.

The id file in the ID folder of the USB memory device is displayed here.

|   |
|---|
| 5 . S D I 1    I D    C O P Y    U S B → I N T                    |
| ► L T 4 6 7 0 . i d                                      1 /    1 |

#### 3. Select OK.

|  |
|--|
| 6 . S D I 1    I D    C O P Y    U S B → I N T                           |
| ■ O K    □ C A N C E L |

#### ● USB Memory Device Structure

ID characters are copied from the ID folder of the USB memory device.

  - └ ■ LT4670\_USER
    - └ ■ ID
      - └ ■ \*\*\*\*.id

### 12.10.16 Copying ID Characters from the Instrument to a USB Memory Device

To copy ID characters in a dedicated format (.id) from the instrument to a USB memory device, follow the procedure below. This feature is useful when you want to use multiple instruments with the same settings. (Save the ID characters in the instrument in advance by using the STORE menu.)

This setting appears when a USB memory device is connected.

#### Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > COPY INT→USB

---

To copy ID characters, follow the procedure below.

#### 1. Select the copy source in the instrument.

Select ALL or from INT1 to INT4.

|  |
|--|
| 4 . S D I 1    I D    C O P Y    I N T → U S B |
| ► A L L  |

#### 2. Select OK.

|  |
|--|
| 5 . S D I 1    I D    C O P Y    I N T → U S B |
| ■ O K                      □ C A N C E L       |

#### ● USB Memory Device Structure

ID characters are copied to the ID folder of the USB memory device.

The date and time of the file will be the date and time selected with TIME SOURCE on the REFERENCE CONFIG menu.

- USB memory device
- └ ■ LT4670\_USER
- └ ■ ID
- └ ■ \*\*\*\*.id

### 12.10.17 Clearing ID Characters

To clear ID characters that have been saved in the instrument, follow the procedure below.

#### Procedure

---

SDI CONFIG > SDI1 > VIDEO > ID CHARACTER > DELETE

---

To clear ID characters, follow the procedure below.

#### 1. Select the ID characters you want to clear.

Select ALL or from INT1 to INT4.

|                                   |
|-----------------------------------|
| 4 . S D I 1    I D    D E L E T E |
| ► A L L                           |

#### 2. Select OK.

|  |
|--|
| 5 . S D I 1    I D    D E L E T E        |
| ■ O K                      □ C A N C E L |

## 12.11 Setting Logos

Under LOGO on the VIDEO menu, you can set a logo.

Here, you can display bitmap format images created in advance in a pattern.  
This is invalid when the pattern is check field.

Figure 12-7 | Setting a logo

### 12.11.1 Displaying a Logo

This section describes the procedure for preparing a logo to displaying it in a pattern.

#### 1. Create a logo.

Create an image in bitmap format according to the following conditions.

Here, as an example, a logo is created with the file name "leader.bmp".

File name: Up to 64 alphanumeric characters or underscore

File format: 24-bit bitmap format (.bmp)

Image size: 640 (width) × 480 (height) or less

#### 2. Save the logo to a USB memory device.

Set up the folder structure on the USB memory device as follows and save the logo to the LOGO folder.

- USB memory device
  - └ ■ LT4670\_USER
    - └ ■ LOGO
      - └ ■ leader.bmp

- 3. Connect the USB memory device to the instrument.**
- 4. Using the COPY USB→INT menu, copy the logo from the USB memory device to the instrument.**

You can copy up to four logos (INT1 to INT4) to the instrument. The logo copies will be common to SDI1 to SDI4.

Here, as an example, "leader.bmp" is copied from a USB memory device to "INT1" on the instrument.

This menu appears only for SDI1 when a USB memory device is connected and contains a LOGO folder.

Using "SDI CONFIG > SDI1 > VIDEO > LOGO > COPY USB→INT", select a copy destination from INT1 to INT4. If there are already logos stored in the instrument, they will be overwritten.

|   |
|---|
| 4 . S D I 1    L O G O    C O P Y    U S B → I N T                    |
| ► N O    D A T A    I N T 1 |

Select the copy source in the USB memory device.

|  |
|--|
| 5 . S D I 1    L O G O    C O P Y    U S B → I N T             |
| l e a d e r . b m p                                      1 / 1 |

Select OK.

|  |
|--|
| 6 . S D I 1    L O G O    C O P Y    U S B → I N T               |
| ■ O K    □ C A N C E L |

- 5. On the SELECT menu, select the logo.**

Select from INT1 to INT4.

|  |
|--|
| 4 . S D I 1    L O G O    S E L E C T                        |
| ► * l e a d e r . b m p                              I N T 1 |

- 6. On the ON/OFF menu, select ON.**

|  |
|--|
| 4 . S D I 1    L O G O                             |
| ■ O N                                      □ O F F |

### 12.11.2 Turning the Logo On and Off

To turn the logo on and off, follow the procedure below.

|  |
|--|
| 4 . S D I 1   L O G O  |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > LOGO > ON/OFF

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 12.11.3 Selecting a Logo

To select the logo to be displayed, follow the procedure below.

A logo must be copied to INT1 to INT4 in advance using the COPY USB→INT menu.

|                                      |
|--------------------------------------|
| 4 . S D I 1   L O G O   S E L E C T  |
| ► * l e a d e r . b m p      I N T 1 |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > LOGO > SELECT

---

Parameters

---

INT1 - INT4

---

Initial value

---

INT1

---

### 12.11.4 Setting the Logo Position (Vertical)

To set the logo position in the vertical direction, follow the procedure below.

The value represents the position of the top of the logo. The top of the pattern is 0%.

|                                     |
|-------------------------------------|
| 4 . S D I 1   L O G O   V - P O S I |
| 0      [ % ]                        |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > LOGO > V-POSI

---

Parameters

---

0 - 100 [%]

---

Initial value

---

0 [%]

---

### 12.11.5 Setting the Logo Position (Horizontal)

To set the logo position in the horizontal direction, follow the procedure below.

The value represents the position of the left end of the logo. The left end of the pattern is 0%.

|             |         |             |
|-------------|---------|-------------|
| 4 . S D I 1 | L O G O | H - P O S I |
| 0           | [ % ]   |             |

#### Procedure

---

SDI CONFIG > SDI1 > VIDEO > LOGO > H-POSI

---

#### Parameters

---

0 - 100 [%]

---

#### Initial value

---

0 [%]

---

### 12.11.6 Turning the Logo Transparency On and Off

To select whether to make the logo transparent, follow the procedure below.

You can specify the portions to be made transparent with LEVEL.

|                              |   |                         |
|------------------------------|---|-------------------------|
| 5 . S D I 1                  | L O G O                                   | T R A N S P A R E N C Y |
| <input type="checkbox"/> O N | <input checked="" type="checkbox"/> O F F |                         |

#### Procedure

---

SDI CONFIG > SDI1 > VIDEO > LOGO > TRANSPARENCY > ON/OFF

---

#### Parameters

---

ON / OFF

---

#### Initial value

---

OFF

---

### 12.11.7 Setting the Logo Transparency Level

To select the luminance level for transparency, follow the procedure below.

The luminance level is represented from 0 to 255. The logo will be displayed by making transparent the portions at or below the set level.

|             |         |                         |
|-------------|---------|-------------------------|
| 5 . S D I 1 | L O G O | T R A N S P A R E N C Y |
| 1 6         |         |                         |

#### Procedure

---

SDI CONFIG > SDI1 > VIDEO > LOGO > TRANSPARENCY > LEVEL

---

#### Parameters

---

0 - 255

---

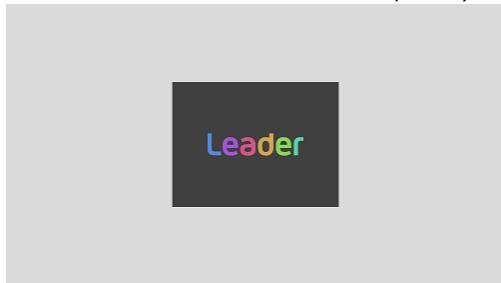

#### Initial value

---

16

---

LEVEL = 16 (portions at or below the luminance level of 16 are made transparent)

LEVEL = 128 (portions at or below the luminance level of 128 are made transparent)

Figure 12-8 | Setting the logo transparency level

#### 12.11.8 Copying Logos from a USB Memory Device to the Instrument

To copy up to four logos from a USB memory device to the instrument, follow the procedure below. The logo copies will be common to SDI1 to SDI4. (Copy the logo to the USB memory device in advance using the COPY INT→USB menu or create and place the logo.)

This menu appears only for SDI1 when a USB memory device is connected and contains a LOGO folder.

## Procedure

SDI CONFIG > SDI1 > VIDEO > LOGO > COPY USB→INT

To copy logos, follow the procedure below.

#### **1. Select the copy destination in the instrument.**

Select from INT1 to INT4. If there are already logos stored in the instrument, they will be overwritten.

## 2. Select the copy source in the USB memory device.

The bmp file in the LOGO folder of the USB memory device is displayed here

5 . S D I 1   L O G O   C O P Y   U S B → I N T  
L e a d e r . b m p                                    1 / 1

### 3 Select OK

6 . S D I 1    L O G O    C O P Y    U S B → I N T  
■ O K                      □ C A N C E L

- **USB Memory Device Structure**

Logos are copied from the LOGO folder of the USB memory device.

- USB memory device
    - └ ■ LT4670\_USER
      - └ ■ LOGO
        - └ ■ \*\*\*\*.bmp

### 12.11.9 Copying a Logo from the Instrument to a USB Memory Device

To copy a logo in bmp format from the instrument to a USB memory device, follow the procedure below. (Copy the logo to the instrument in advance using the COPY USB→INT menu.)

This menu appears only for SDI1 when a USB memory device is connected.

#### Procedure

---

SDI CONFIG > SDI1 > VIDEO > LOGO > COPY INT→USB

---

To copy logos, follow the procedure below.

#### 1. Select the copy source in the instrument.

Select ALL or from INT1 to INT4.

|             |         |         |               |
|-------------|---------|---------|---------------|
| 4 . S D I 1 | L O G O | C O P Y | I N T → U S B |
| ▶ A L L     |         |         |               |

#### 2. Select OK.

If a logo with the same file name is saved in the USB memory device, it will be overwritten.  
If ALL is selected and logos with the same file name are saved in INT1 to INT4, only a single set with the largest number (INT\*) is saved.

|   |         |                                      |               |

### 12.11.10 Clearing a Logo

To clear a logo stored in the instrument, follow the procedure below.  
This menu appears only for SDI1.

#### Procedure

---

SDI CONFIG > SDI1 > VIDEO > LOGO > DELETE

---

To clear logos, follow the procedure below.

**1. Select the logo you want to clear.**

Select ALL or from INT1 to INT4.

|                                       |
|---------------------------------------|
| 4 . S D I 1    L O G O    D E L E T E |
| ► A L L                               |

**2. Select OK.**

If you clear the currently displayed logo, the logo will continue to appear even after you select OK. By switching the logo, you can no longer display it again.

---

---

#### Initial value

---

OFF

---

### 12.12.2 Selecting the Moving Box Color

To select the moving box color, follow the procedure below.

|                                   |
|-----------------------------------|
| 4 . S D I 1    B O X    C O L O R |
| ► *    W H I T E                  |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > MOVING BOX > BOX COLOR

---

Parameters

---

WHITE / YELLOW / CYAN / GREEN / BLUE / RED / MAGENTA / BLACK

---

Initial value

---

WHITE

---

### 12.12.3 Selecting the Moving Box Speed (Vertical)

To select the vertical moving box speed, follow the procedure below.

|                                       |
|---------------------------------------|
| 4 . S D I 1    B O X    V - S P E E D |
| ► *    M I D D L E                    |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > MOVING BOX > V-SPEED

---

Parameters

---

LOW / MIDDLE / HIGH

---

Initial value

---

MIDDLE

---

### 12.12.4 Selecting the Moving Box Speed (Horizontal)

To select the horizontal moving box speed, follow the procedure below.

|                                       |
|---------------------------------------|
| 4 . S D I 1    B O X    H - S P E E D |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > MOVING BOX > H-SPEED

---

Parameters

---

LOW / MIDDLE / HIGH

---

Initial value

---

MIDDLE

---

### 12.12.5 Selecting the Moving Box Height

To select the moving box height, follow the procedure below.

The larger the value, the larger the size.

```
4 . S D I 1   B O X   V - S I Z E  
◆ *   S I Z E 2
```

Procedure

---

SDI CONFIG > SDI1 > VIDEO > MOVING BOX > V-SIZE

---

Parameters

---

SIZE1 / SIZE2 / SIZE3 / SIZE4 / SIZE5

---

Initial value

---

SIZE2

---

### 12.12.6 Selecting the Moving Box Width

To select the moving box width, follow the procedure below.

The larger the value, the larger the size.

```
4 . S D I 1   B O X   H - S I Z E  
◆ *   S I Z E 2
```

Procedure

---

SDI CONFIG > SDI1 > VIDEO > MOVING BOX > H-SIZE

---

Parameters

---

SIZE1 / SIZE2 / SIZE3 / SIZE4 / SIZE5

---

Initial value

---

SIZE2

---

## 12.13 Setting a Circle

Under CIRCLE on the VIDEO menu, you can set a circle.

This is invalid when the pattern is check field.

|                          |
|--------------------------|
| 2 . S D I 1    V I D E O |
| ◆ C I R C L E            |
| J                        |

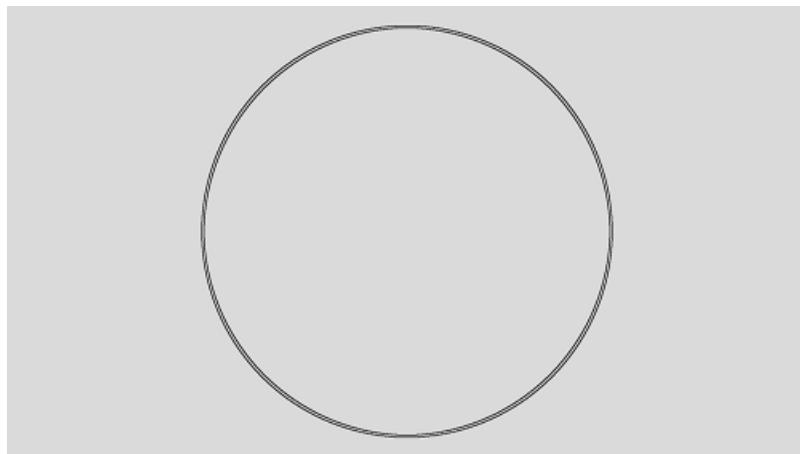

Figure 12-10 | Setting a circle

### 12.13.1 Turning the Circle On and Off

To turn the circle on and off, follow the procedure below.

|   |
|---|
| 4 . S D I 1    C I R C L E                                |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > CIRCLE > ON/OFF

---

Parameters

---

ON/OFF

---

Initial value

---

OFF

---

### 12.13.2 Selecting the Circle Level

To set the intensity level of the circle, follow the procedure below.

|   |                                |  |
|---|--------------------------------|--|
| 4 . S D I 1   C I R C L E   L E V E L       |                                |  |
| <input checked="" type="checkbox"/> 1 0 0 % | <input type="checkbox"/> 7 5 % |  |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > CIRCLE > LEVEL

---

Parameters

---

100% / 75%

---

Initial value

---

100%

---

### 12.13.3 Selecting the Circle Size

To select the circle size, follow the procedure below.

The vertical dimension of the picture is 100%.

|   |                                |                                |
|---|--------------------------------|--------------------------------|
| 4 . S D I 1   C I R C L E   S I Z E       |                                |                                |
| <input checked="" type="checkbox"/> 9 0 % | <input type="checkbox"/> 8 0 % | <input type="checkbox"/> 7 0 % |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > CIRCLE > SIZE

---

Parameters

---

90% / 80% / 70%

---

Initial value

---

90%

---

### 12.13.4 Turning Circle Blinking On and Off

To turn circle blinking on and off, follow the procedure below.

|                               |   |  |
|-------------------------------|---|--|
| 5 . S D I 1   I D   B L I N K |   |  |
| <input type="checkbox"/> O N  | <input checked="" type="checkbox"/> O F F |  |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > CIRCLE > BLINK > ON/OFF

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 12.13.5 Setting the Circle Blinking On-Time

To set the circle blinking on-time, follow the procedure below.

|   |
|---|
| 5 . S D I 1    I D    B L I N K    O N    T I M E |
| 1    [ S E C ]                                    |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > CIRCLE > BLINK > ON TIME

---

Parameters

---

1 - 9 [SEC]

---

Initial value

---

1 [SEC]

---

### 12.13.6 Setting the Circle Blinking Off-Time

To set the circle blinking off-time, follow the procedure below.

|   |
|---|
| 5 . S D I 1    I D    B L I N K    O F F    T I M E |
| 1    [ S E C ]                                      |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > CIRCLE > BLINK > OFF TIME

---

Parameters

---

1 - 9 [SEC]

---

Initial value

---

1 [SEC]

---

## 12.14 Setting the Time Code

Under TIMECODE on the VIDEO menu, you can set the time code.  
This is invalid when the pattern is check field.

|                          |   |
|--------------------------|---|
| 2 . S D I 1   V I D E O  |   |
| <b>◆ T I M E C O D E</b> | J |

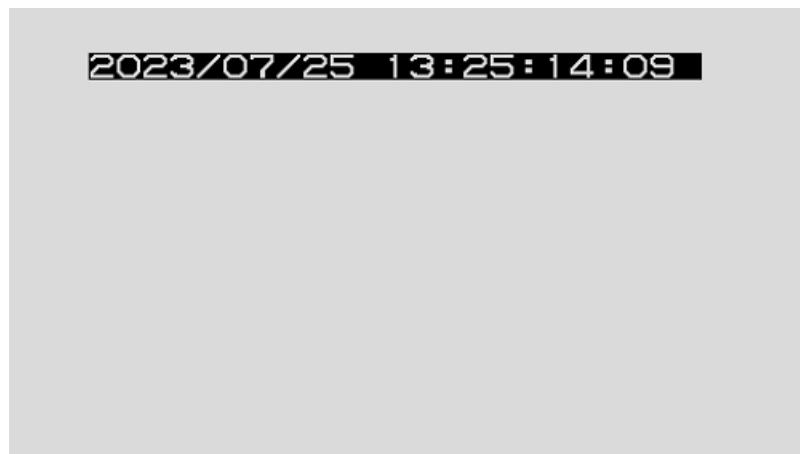

Figure 12-11 | Setting the time code

### 12.14.1 Turning the Time Code On and Off

Turn the time code on and off, follow the procedure below.

If it is set to ON, the date and time selected with TIME SOURCE on the REFERENCE CONFIG menu is displayed.

|                               |   |
|-------------------------------|---|
| 4 . S D I 1   T I M E C O D E |   |
| <input type="checkbox"/> O N  | <input checked="" type="checkbox"/> O F F |

---

#### Procedure

---

SDI CONFIG > SDI1 > VIDEO > TIMECODE > ON/OFF

---

#### Parameters

---

---

ON/OFF

---

#### Initial value

---

---

OFF

---

### 12.14.2 Setting the Time Code Position (Vertical)

To set the vertical time code position, follow the procedure below.

The value represents the position of the top of the time code. The top of the pattern is 0%.

|             |                 |             |
|-------------|-----------------|-------------|
| 4 . S D I 1 | T I M E C O D E | V - P O S I |
| 0           | [ % ]           |             |

**Procedure**

---

SDI CONFIG > SDI1 > VIDEO > TIMECODE > V-POSI

---

**Parameters**

---

0 - 100 [%]

---

**Initial value**

---

0 [%]

---

### 12.14.3 Setting the Time Code Position (Horizontal)

To set the horizontal time code position, follow the procedure below.

The value represents the position of the left end of the time code. The left end of the pattern is 0%.

|             |                 |             |
|-------------|-----------------|-------------|
| 4 . S D I 1 | T I M E C O D E | H - P O S I |
| 0           | [ % ]           |             |

**Procedure**

---

SDI CONFIG > SDI1 > VIDEO > TIMECODE > H-POSI

---

**Parameters**

---

0 - 100 [%]

---

**Initial value**

---

0 [%]

---

### 12.14.4 Selecting the Time Code Size

To select the time code size, follow the procedure below.

The size of x1 is 32×32 dot/character.

|   |                              |                              |                              |
|---|------------------------------|------------------------------|------------------------------|
| 4 . S D I 1                             | T I M E C O D E              | S I Z E                      |                              |
| <input checked="" type="checkbox"/> x 1 | <input type="checkbox"/> x 2 | <input type="checkbox"/> x 4 | <input type="checkbox"/> x 8 |

**Procedure**

---

SDI CONFIG > SDI1 > VIDEO > TIMECODE > SIZE

---

**Parameters**

---

x1 / x2 / x4 / x8

---

**Initial value**

---

x1

---

### 12.14.5 Selecting the Time Code Level

To select the time code intensity level, follow the procedure below.

|   |                                |
|---|--------------------------------|
| 4 . S D I 1    T I M E C O D E    L E V E L |                                |
| <input checked="" type="checkbox"/> 1 0 0 % | <input type="checkbox"/> 7 5 % |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > TIMECODE > LEVEL

---

Parameters

---

100% / 75%

---

Initial value

---

100%

---

### 12.14.6 Turning Time Code Background Transparency On and Off

To select whether to make the time code background transparent, follow the procedure below.

|   |   |
|---|---|
| 4 . S D I 1    T I M E C O D E    T R A N S |   |
| <input type="checkbox"/> O N                | <input checked="" type="checkbox"/> O F F |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > TIMECODE > TRANSPARENCY

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

TRANSPARENCY = ON

TRANSPARENCY = OFF

Figure 12-12 | Turning time code background transparency on and off

## 12.15 Turning Lip Sync On and Off

To turn lip sync pattern on and off, follow the procedure below.

When it is turned on, the instrument outputs lip sync patterns. Combining these with our lip-sync-compatible waveform monitor makes it possible to measure the offset between the video signal and the audio signal that occurs in the transfer route for each channel. For details, see the instruction manual of the waveform monitor.

|  |
|--|
| 3 . S D I 1    L I P S Y N C   |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

Procedure

---

SDI CONFIG > SDI1 > VIDEO > LIPSYNC

---

Parameters

---

ON/OFF

---

Initial value

---

OFF

---

A lip sync pattern is divided into three areas. From the top, they are the pattern, raster, and scale areas. Audio is turned on or muted in sync with the image signal.

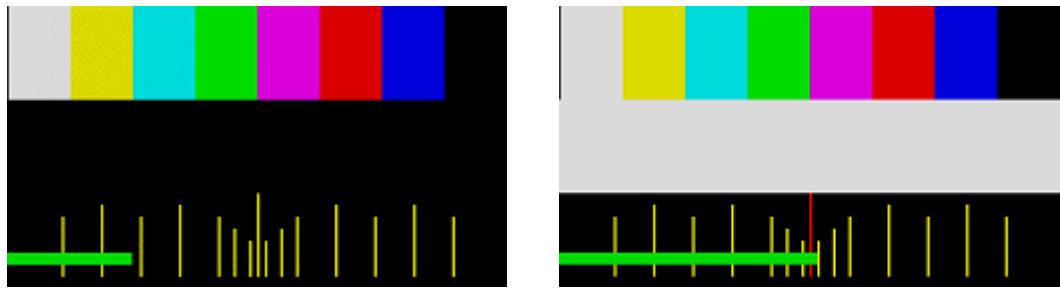

Figure 12-13 | Lip sync pattern

### **Pattern**

The pattern selected from "PATTERN" on the SDI CONFIG menu is displayed. If the check field pattern is selected, a 100% color bar is displayed.

### **Raster**

If the scale slide bar is between 0 and +15 [frames], a white raster is displayed. If not, a black raster is displayed.

### **Scale**

A green slide bar scrolls from left to right (approximately 6 seconds for 1080/59.94I). The center scale turns red when the slide bar is between 0 and +15 [frames].

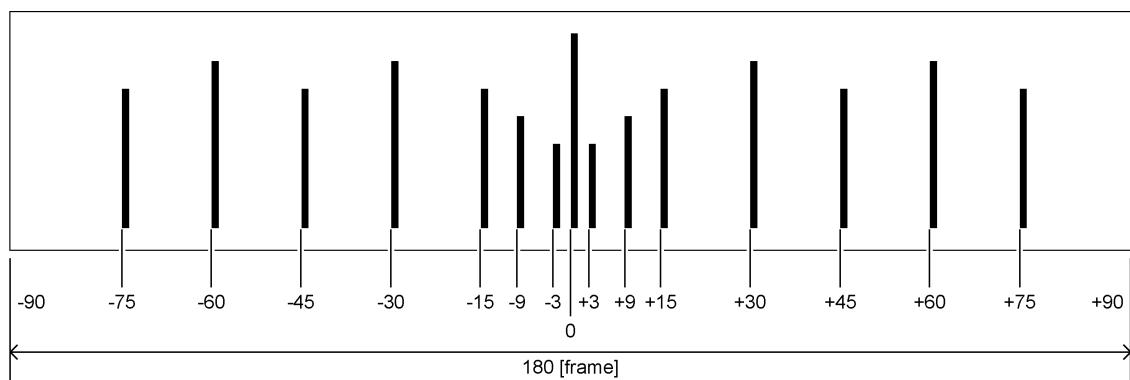

Figure 12-14 | Scale

### **Audio**

If the scale slide bar is between 0 and +15 [frames], audio turns on. If not, audio is muted. The click setting is invalid.

## 12.16 Configuring Embedded Audio

Under EMBEDDED AUDIO on the SDI1 menu, you can configure embedded audio.

16 audio channels can be embedded in the SDI output.

(Embedding is not possible when the pattern is a check field.)

Channels 1 to 4, 5 to 8, 9 to 12, and 13 to 16 are called groups 1, 2, 3, and 4, respectively. The frequency, level, and the like can be set for each channel separately. The resolution, pre-emphasis, and the like can be set for each group separately.

In addition, settings shared by channels and settings shared by groups can also be set. For example, if settings shared with channel 1 are turned ON for channel 2, merely specifying settings for channel 1 causes channel 2 to automatically have the same settings as those for channel 1.

Table 12-3 | Channels and groups

| Channel                   | Group   |
|---------------------------|---|
| 1ch                       | Group 1                                       |
| Ch2 (Ch1 also possible)   |   |
| Ch3 (Ch1 also possible)   |   |
| Ch4 (Ch1 also possible)   |   |
| 5ch                       | Group 2<br>(can also be set equal to group 1) |
| Ch6 (Ch5 also possible)   |   |
| Ch7 (Ch5 also possible)   |   |
| Ch8 (Ch5 also possible)   |   |
| 9ch                       | Group 3<br>(can also be set equal to group 1) |
| Ch10 (Ch9 also possible)  |   |
| Ch11 (Ch9 also possible)  |   |
| Ch12 (Ch9 also possible)  |   |
| 13ch                      | Group 4<br>(can also be set equal to group 3) |
| Ch14 (Ch13 also possible) |   |
| Ch15 (Ch13 also possible) |   |
| Ch16 (Ch13 also possible) |   |

### 12.16.1 Turning the Audio On and Off

To turn the audio on or off at the group level, follow the procedure below.

|   |                              |                              |                              |
|---|------------------------------|------------------------------|------------------------------|
| 3 . S D I 1                             | E M B                        | A U D I O                    | O N / O F F                  |
| <input checked="" type="checkbox"/> G 1 | <input type="checkbox"/> G 2 | <input type="checkbox"/> G 3 | <input type="checkbox"/> G 4 |

Procedure

---

SDI CONFIG > SDI1 > EMBEDDED AUDIO > ON/OFF

---

Parameters

---

ON / OFF

---

Initial value

---

ON

---

### 12.16.2 Selecting the Resolution

To select the resolution for the selected group, follow the procedure below.

If the SDI format is set to 720x487 SD, not all groups can be set to 24BIT. Up to three groups can be set to 24BIT.

|   |     |                                    |
|---|-----|------------------------------------|
| 4 . S D I 1                                   | G 1 | R E S O L U T I O N                |
| <input checked="" type="checkbox"/> 2 0 B I T |     | <input type="checkbox"/> 2 4 B I T |

Procedure

---

SDI CONFIG > SDI1 > EMBEDDED AUDIO > G1 - 4 > RESOLUTION

---

Parameters

---

20BIT / 24BIT

---

Initial value

---

20BIT

---

### 12.16.3 Selecting the Pre-emphasis Mode

To select the pre-emphasis mode for the selected group, follow the procedure below.

|                                    |     |                                    |   |
|------------------------------------|-----|------------------------------------|---|
| 4 . S D I 1                        | G 1 | E M P H A S I S                    |   |
| <input type="checkbox"/> 5 0 / 1 5 |     | <input type="checkbox"/> C C I T T | <input checked="" type="checkbox"/> O F F |

Procedure

---

SDI CONFIG > SDI1 > EMBEDDED AUDIO > G1 - 4 > EMPHASIS

---

Parameters

---

50/15 / CCITT / OFF

---

Initial value

---

OFF

---

#### 12.16.4 Selecting the Frequency

To select the frequency of the selected channel, follow the procedure below.

```
5 . S D I 1   G 1 / C H 1   F R E Q
◀ * 1 k H z
```

##### Procedure

---

SDI CONFIG > SDI1 > EMBEDDED AUDIO > G1 - 4 > CH1 - 16 > FREQ

---

##### Parameters

---

SILENCE / 400Hz / 800Hz / 1kHz

---

##### Initial value

---

1kHz

---

#### 12.16.5 Setting the Level

To set the level of the selected channel, follow the procedure below.

```
5 . S D I 1   G 1 / C H 1   L E V E L
      - 2 0   [ d B F S ]
```

##### Procedure

---

SDI CONFIG > SDI1 > EMBEDDED AUDIO > G1 - 4 > CH1 - 16 > LEVEL

---

##### Parameters

---

-60 - 0 [dBFS]

---

##### Initial value

---

-20 [dBFS]

---

#### 12.16.6 Setting Clicks

You can insert click sounds into the selected channel. Follow the procedure below to set the insertion interval to a value other than OFF.

This is invalid when LIPSYNC is set to ON.

```
5 . S D I 1   G 1 / C H 1   C L I C K
▶ * O F F
```

##### Procedure

---

SDI CONFIG > SDI1 > EMBEDDED AUDIO > G1 - 4 > CH1 - 16 > CLICK

---

##### Parameters

---

OFF / 1sec / 2sec / 4sec

---

##### Initial value

---

OFF

---

### 12.16.7 Settings Shared by Channels

To specify the settings for CH2 (frequency, level, and click sound) to be the same as those for CH1, select ON by following the procedure below. In this case, you cannot specify the settings for CH2.

The same holds true for other channels.

|  |
|--|
| 5 . S D I 1    G 1 / C H 2    E Q U A L    C H 1                       |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

#### Procedure

SDI CONFIG > SDI1 > EMBEDDED AUDIO

- > G1 > CH2 - 4 > EQUAL TO CH1
- > G2 > CH6 - 8 > EQUAL TO CH5
- > G3 > CH10 - 12 > EQUAL TO CH9
- > G4 > CH14 - 16 > EQUAL TO CH13

#### Parameters

ON / OFF

#### Initial value

OFF

### 12.16.8 Settings Shared by Groups

To specify the settings for group 2 to be the same as those for group 1, select ON by following the procedure below. In this case, you cannot specify the settings for group 2.

The same holds true for group 3 and group 4.

|  |
|--|
| 4 . S D I 1    G 2    E Q U A L    T O    G 1                          |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

#### Procedure

SDI CONFIG > SDI1 > EMBEDDED AUDIO

- > G2 > EQUAL TO G1
- > G3 > EQUAL TO G1
- > G4 > EQUAL TO G3

#### Parameters

ON / OFF

#### Initial value

OFF

## 12.17 Setting Ancillary Data

Under ANC on the SDI1 menu, you can set ancillary data.

|             |   |
|-------------|---|
| 1 . S D I 1 |   |
| ◆ A N C     | J |

### 12.17.1 Turning the LTC Signals On and Off

To turn LTC insertion on and off, follow the procedure below.

|                              |       |   |  |
|------------------------------|-------|---|--|
| 3 . S D I 1                  | A N C | A T C - L T C                             |  |
| <input type="checkbox"/> O N |       | <input checked="" type="checkbox"/> O F F |  |

Procedure

---

SDI CONFIG > SDI1 > ANC > ATC-LTC

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 12.17.2 Turning the VITC Signals On and Off

To turn VITC insertion on and off, follow the procedure below.

|                              |       |   |  |
|------------------------------|-------|---|--|
| 3 . S D I 1                  | A N C | A T C - V I T C                           |  |
| <input type="checkbox"/> O N |       | <input checked="" type="checkbox"/> O F F |  |

Procedure

---

SDI CONFIG > SDI1 > ANC > ATC-VITC

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 12.17.3 Setting Dropped Frames

To select the dropped frame setting, follow the procedure below.

This setting is valid when the frame frequency of the SDI output is set to 59.94 or 29.97.

|   |                                |           |
|---|--------------------------------|-----------|
| 3 . S D I 1                             | D R O P                        | F R A M E |
| <input checked="" type="checkbox"/> O N | <input type="checkbox"/> O F F |           |

Procedure

---

SDI CONFIG > SDI1 > ANC > DROP FRAME

---

Parameters

|      |                                      |
|------|--------------------------------------|
| ON:  | Dropped frame time code is used.     |
| OFF: | Non-dropped frame time code is used. |

Initial value

---

ON

---

### 12.18 Setting the SDI Output

Under OUTPUT SETTING on the SDI1 menu, you can set the SDI output.

|                               |   |
|-------------------------------|---|
| 1 . S D I 1                   |   |
| ▲ O U T P U T   S E T T I N G | J |

#### 12.18.1 Turning the SDI Output On and Off

To turn the SDI output on and off, follow the procedure below.

|   |  |
|---|--|
| 3 . S D I 1                                     | O U T P U T                            |
| <input checked="" type="checkbox"/> E N A B L E | <input type="checkbox"/> D I S A B L E |

Procedure

---

SDI CONFIG > SDI1 > OUTPUT SETTING > OUTPUT

---

Parameters

---

ENABLE / DISABLE

---

Initial value

---

ENABLE

---

### 12.18.2 Turning BMCA Linkage On and Off (SER03)

If you set ENABLE in the procedure below, the SDI output is stopped in linkage with BMCA of the selected PTP. Once the SDI output is stopped, this menu and the OUTPUT menu are both changed to DISABLE.

To enable the SDI output again, set the OUTPUT menu to ENABLE.

|   |
|---|
| 3 . S D I 1   L I N K E D   T O   P T P 1                 |
| <input type="checkbox"/> E N A B L E      ■ D I S A B L E |

Procedure

---

SDI CONFIG > SDI1 > OUTPUT SETTING > LINKED TO PTP1 BMCA / LINKED TO PTP2 BMCA

---

Parameters

---

ENABLE / DISABLE

---

Initial value

---

DISABLE

---

### 12.19 Settings Shared by SDI Outputs

To specify the settings for SDI2 to be same as those for SDI1, select ON by following the procedure below. In this case, you cannot specify the settings for SDI2.

The same holds true for SDI3 and SDI4.

|   |
|---|
| 2 . S D I 2   E Q U A L   T O   S D I 1   |
| <input type="checkbox"/> O N      ■ O F F |

Procedure

---

SDI CONFIG

- > SDI2 > EQUAL TO SDI1
- > SDI3 > EQUAL TO SDI1
- > SDI4 > EQUAL TO SDI3

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

# 13 PTP CONFIG MENU (SER03)

The PTP CONFIG menu is used to specify PTP settings.

To display the PTP CONFIG menu, press CONFIG several times until the following menu appears.

On the PTP CONFIG menu, you can specify settings for PTP1 and PTP2 individually. The procedure below is for PTP1, but the same procedure can also be applied to PTP2.

## 13.1 PTP Leader and PTP Follower

PTP involves cases in which this instrument is used as a leader and cases in which it is used as a follower.

These operation modes can be set individually for PTP1 and PTP2. The operation modes are determined by the REFERENCE SOURCE and TIME SOURCE settings in the REFERENCE CONFIG menu, as shown below.

Table 13-1 | PTP leader and PTP follower

| REFERENCE SOURCE                  | TIME SOURCE    | PTP1     | PTP2     |
|-----------------------------------|----------------|----------|----------|
| Other than PTP                    | Other than PTP | Leader   | Leader   |
| INTERNAL, GENLOCK, 10MHz CW, PTP1 | PTP1           | Follower | Leader   |
| INTERNAL, GENLOCK, 10MHz CW, PTP2 | PTP2           | Leader   | Follower |
| PTP1/2                            | PTP1/2         | Follower | Follower |

## 13.2 Setting the PTP Leader

### 13.2.1 Selecting the Mode

To select whether to enable the PTP leader, follow the procedure below.

#### Procedure

---

PTP CONFIG > PTP1 > MODE

---

#### Parameters

---

ENABLE LEADER / DISABLE LEADER

---

#### Initial value

---

ENABLE LEADER (PTP1)

---

DISABLE LEADER (PTP2)

---

### 13.2.2 Configuring BMCA

To select whether to enable BMCA, follow the procedure below.

|                                     |
|-------------------------------------|
| 3 . P T P 1    B M C A    S E T U P |
| ▶ * E N A B L E                     |

#### Procedure

---

PTP CONFIG > PTP1 > BMCA > BMCA SETUP

---

#### Parameters

|                   |                            |
|-------------------|----------------------------|
| ENABLE:           | BMCA is enabled.           |
| ENABLE ONLY ONCE: | BMCA is enabled only once. |
| DISABLE:          | BMCA is disabled.          |

---

#### Initial value

---

ENABLE

---

### 13.2.3 Recovering Priority 1

If BMCA works when ENABLE ONLY ONCE is set in BMCA SETUP, Priority 1 lowers internally.

To recover the value of Priority 1, select OK by following the procedure below.

|   |
|---|
| 3 . P T P 1    P R I 1    R E C O V E R Y |
| □ O K              ■ C A N C E L          |

#### Procedure

---

PTP CONFIG > PTP1 > BMCA > PRIORITY1 RECOVERY

---

### 13.2.4 Selecting the Profile

To select the profile, follow the procedure below.

|   |
|---|
| 2 . P T P 1    P R O F I L E    T Y P E |
| ▶ * S T 2 0 5 9                         |

#### Procedure

---

PTP CONFIG > PTP1 > PROFILE TYPE

---

#### Parameters

---

ST2059 / AES67 / GENERAL

---

#### Initial value

---

ST2059

---

### 13.2.5 Profile Default Settings

To set the default values of the selected profile, press the ENTER key by following the procedure below.

```
3 . P T P 1   P R O F I L E
ENTER TO DEFAULT
```

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > PROFILE SET DEFAULT

---

### 13.2.6 Setting the Domain

To set the domain number, follow the procedure below.

```
3 . P T P 1   D O M A I N
1 2 7
```

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > DOMAIN

---

#### Parameters

0 to 127 (when PROFILE TYPE is set to ST2059)

0 to 255 (when PROFILE TYPE is set to AES67 or GENERAL)

---

#### Initial value

127 (when PTP1 is to be configured and PROFILE TYPE is set to ST2059)

126 (when PTP2 is to be configured and PROFILE TYPE is set to ST2059)

0 (when PROFILE TYPE is set to AES67 or GENERAL)

---

### 13.2.7 Selecting the Communication Mode

To select the communication mode, follow the procedure below.

```
3 . P T P 1   C O M M U N I C A T I O N
♦ * M I X E D   S M P T E   w / o   N E
```

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > COMMUNICATION MODE

---

#### Parameters

MIXED SMPTE / MIXED SMPTE w/o NE / UNICAST / MULTICAST (when PROFILE TYPE is set to ST2059)

UNICAST / MULTICAST (when PROFILE TYPE is set to AES67 or GENERAL)

---

#### Initial value

MIXED SMPTE w/o NE (when PROFILE TYPE is set to ST2059)

MULTICAST (when PROFILE TYPE is set to AES67 or GENERAL)

---

### 13.2.8 Setting the Announce Message Transmission Interval

To select the announce message transmission interval, follow the procedure below.  
This menu item is not displayed when COMMUNICATION MODE is set to UNICAST.

|               |                 |       |
|---------------|-----------------|-------|
| 3 . P T P 1   | A N N O U N C E | I N T |
| ♦ * 0 . 2 5 s | 4 H z           |       |

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > ANNOUNCE INTERVAL

---

#### Parameters

0.125s / 0.25s / 0.5s / 1s / 2s (when PROFILE TYPE is set to ST2059)  
1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to AES67)  
0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to GENERAL)

---

#### Initial value

0.25s (when PROFILE TYPE is set to ST2059)  
2s (when PROFILE TYPE is set to AES67 or GENERAL)

---

### 13.2.9 Setting the Sync Message Transmission Interval

To select the sync message transmission interval, follow the procedure below.  
This menu item is not displayed when COMMUNICATION MODE is set to UNICAST.

|                 |         |                 |
|-----------------|---------|-----------------|
| 3 . P T P 1     | S Y N C | I N T E R V A L |
| ♦ * 0 . 1 2 5 s | 8 H z   |                 |

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > SYNC INTERVAL

---

#### Parameters

0.0078s / 0.015s / 0.0312s / 0.0625s / 0.125s / 0.25s / 0.5s  
(when PROFILE TYPE is set to ST2059)  
0.0625s / 0.125s / 0.25s / 0.5s / 1s (when PROFILE TYPE is set to AES67)  
0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to GENERAL)

---

#### Initial value

0.125s (when PROFILE TYPE is set to ST2059 or AES67)  
1s (when PROFILE TYPE is set to GENERAL)

---

### 13.2.10 Setting the Announce Timeout

To set the number of announce messages used to judge whether a timeout occurs, follow the procedure below.

If the specified number of messages are not received consecutively at the interval specified by the leader, a timeout occurs.

|                             |
|-----------------------------|
| 3 . P T P 1 A N N O U N C E |
| T I M E O U T C O U N T : 3 |

Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > ANNOUNCE TIMEOUT

---

Parameters

---

2 - 10

---

Initial value

---

3

---

### 13.2.11 Setting Priority 1

To set priority 1 of the leader, follow the procedure below.

|                               |
|-------------------------------|
| 3 . P T P 1 P R I O R I T Y 1 |
| 1 2 8                         |

Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > PRIORITY1

---

Parameters

---

0 - 255

---

Initial value

---

128

---

### 13.2.12 Setting Priority 2

To set priority 2 of the leader, follow the procedure below.

|                               |
|-------------------------------|
| 3 . P T P 1 P R I O R I T Y 2 |
| 1 2 8                         |

Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > PRIORITY2

---

Parameters

---

0 - 255

---

Initial value

---

128

---

### 13.2.13 Selecting the Step

To select the step, follow the procedure below.

```
3 . P T P 1   S T E P
▶ * O N E   S T E P
```

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > STEP

---

#### Parameters

|           |  |
|-----------|--|
| ONE STEP: | A timestamp is sent with a sync message.                                 |
| TWO STEP: | A timestamp is sent with a follow-up message, apart from a sync message. |

---

#### Initial value

---

ONE STEP

---

### 13.2.14 Selecting the Default Frame

When PROFILE TYPE is set to ST2059, to select the default frame, follow the procedure below.

```
4 . P T P 1   S T 2 0 5 9
▶ * F R A M E : 2 9 . 9 7
```

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > ST2059 > DEFAULT FRAME

---

#### Parameters

---

23.98 / 24 / 25 / 29.97 / 30 / 47.95 / 48 / 50 / 59.94 / 60 / 71.92 / 72 / 100 / 119.9 / 120

---

#### Initial value

---

29.97

---

### 13.2.15 Setting the Dropped Frame Flag

When PROFILE TYPE is set to ST2059, to select whether to enable the dropped frame flag, follow the procedure below.

```
4 . P T P 1   S T 2 0 5 9
▶ * D R O P   F R A M E : E N A B L E
```

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > ST2059 > DROP FRAME FLAG

---

#### Parameters

---

ENABLE / DISABLE

---

#### Initial value

---

ENABLE

---

### 13.2.16 Setting the Color Frame ID

When PROFILE TYPE is set to ST2059, to select whether to enable the color frame ID, follow the procedure below.

```
4 . P T P 1   S T 2 0 5 9
▶ * C F I D : E N A B L E
```

Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > ST2059 > COLOR FRAME ID

---

Parameters

---

ENABLE / DISABLE

---

Initial value

---

ENABLE

---

### 13.2.17 Selecting the Propagation Time Measurement Method

To select the propagation time measurement method, follow the procedure below.

```
3 . P T P 1   D E L A Y   M E C H A N I S M
▶ * E N D   T O   E N D
```

Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > DELAY MECHANISM

---

Parameters

---

END TO END / PEER TO PEER

---

Initial value

---

END TO END

---

### 13.3 Setting the PTP Follower

#### 13.3.1 Selecting the Mode

The mode is fixed to PTP follower, and you cannot change it.

```
2 . P T P 1   M O D E
* F O L L O W E R
```

Procedure

---

PTP CONFIG > PTP1 > MODE

---

Parameters

---

FOLLOWER

---

#### 13.3.2 Selecting the Profile

To select the profile, follow the procedure below.

```
2 . P T P 1   P R O F I L E   T Y P E
▶ * S T 2 0 5 9
```

Procedure

---

PTP CONFIG > PTP1 > PROFILE TYPE

---

Parameters

---

ST2059 / AES67 / GENERAL

---

Initial value

---

ST2059

---

#### 13.3.3 Profile Default Settings

To set the default values of the selected profile, press the ENTER key by following the procedure below.

```
3 . P T P 1   P R O F I L E
E N T E R   T O   D E F A U L T
```

Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > PROFILE SET DEFAULT

---

### 13.3.4 Setting the Domain

To set the domain number, follow the procedure below.

```
3 . P T P 1   D O M A I N  
1 2 7
```

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > DOMAIN

---

#### Parameters

0 to 127 (when PROFILE TYPE is set to ST2059)

0 to 255 (when PROFILE TYPE is set to AES67 or GENERAL)

---

#### Initial value

127 (when PTP1 is to be configured and PROFILE TYPE is set to ST2059)

0 (when PROFILE TYPE is set to AES67 or GENERAL)

---

### 13.3.5 Setting the Communication Mode

To select the communication mode, follow the procedure below.

```
3 . P T P 1   C O M M U N I C A T I O N  
◀ * M U L T I C A S T
```

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > COMMUNICATION MODE

---

#### Parameters

MIXED SMPTE / MIXED SMPTE w/o NE / UNICAST / MULTICAST (when PROFILE TYPE is set to ST2059)

UNICAST / MULTICAST (when PROFILE TYPE is set to AES67 or GENERAL)

---

#### Initial value

---

MULTICAST

---

### 13.3.6 Selecting the Desired Announce Message Transmission Interval

When COMMUNICATION MODE is set to UNICAST, to select the interval at which you want the announce message to be transmitted to the destination leader, follow the procedure below.  
Select an interval shorter than ANNOUNCE REQD INT.

|             |           |           |       |
|-------------|-----------|-----------|-------|
| 3 . P T P 1 | A N C     | D E S I R | I N T |
| ◀ *         | 0 . 2 5 s | 4 H z     |       |

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > ANNOUNCE DESIR INT

---

#### Parameters

0.125s / 0.25s / 0.5s / 1s / 2s (when PROFILE TYPE is set to ST2059)  
1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to AES67)  
0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to GENERAL)

---

#### Initial value

0.25s (when PROFILE TYPE is set to ST2059)  
2s (when PROFILE TYPE is set to AES67 or GENERAL)

---

### 13.3.7 Selecting the Announce Message Reception Interval

When COMMUNICATION MODE is set to UNICAST, to set the minimum interval at which the follower can receive the announce message, follow the procedure below.

|             |       |           |       |
|-------------|-------|-----------|-------|
| 3 . P T P 1 | A N C | R E Q D   | I N T |
| ◀ *         | 2 s   | 0 . 5 H z |       |

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > ANNOUNCE REQD INT

---

#### Parameters

0.125s / 0.25s / 0.5s / 1s / 2s (when PROFILE TYPE is set to ST2059)  
1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to AES67)  
0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to GENERAL)

---

#### Initial value

2s (when PROFILE TYPE is set to ST2059)  
16s (when PROFILE TYPE is set to AES67 or GENERAL)

---

### 13.3.8 Selecting the Desired Sync Message Transmission Interval

When COMMUNICATION MODE is set to UNICAST, to select the interval at which you want the sync message to be transmitted to the destination leader, follow the procedure below.

Select an interval shorter than SYNC REQD INT.

|             |             |           |       |
|-------------|-------------|-----------|-------|
| 3 . P T P 1 | S Y N       | D E S I R | I N T |
| ◀ *         | 0 . 1 2 5 s | 8 H z     |       |

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > SYNC DESIR INT

---

#### Parameters

0.0078s / 0.015s / 0.0312s / 0.0625s / 0.125s / 0.25s / 0.5s (when PROFILE TYPE is set to ST2059)

0.0625s / 0.125s / 0.25s / 0.5s / 1s / 2s (when PROFILE TYPE is set to AES67)

0.0078s / 0.015s / 0.0312s / 0.0625s / 0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s (when PROFILE TYPE is set to GENERAL)

---

#### Initial value

0.125s (when PROFILE TYPE is set to ST2059)

1s (when PROFILE TYPE is set to AES67)

2s (when PROFILE TYPE is set to GENERAL)

---

### 13.3.9 Selecting the Sync Message Reception Interval

When COMMUNICATION MODE is set to UNICAST, to select the minimum interval at which the follower can receive the sync message, follow the procedure below.

|             |         |         |       |
|-------------|---------|---------|-------|
| 3 . P T P 1 | S Y N   | R E Q D | I N T |
| ◀ *         | 0 . 5 s | 2 H z   |       |

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > SYNC REQD INT

---

#### Parameters

0.0078s / 0.015s / 0.0312s / 0.0625s / 0.125s / 0.25s / 0.5s (when PROFILE TYPE is set to ST2059)

0.0625s / 0.125s / 0.25s / 0.5s / 1s / 2s (when PROFILE TYPE is set to AES67)

0.0078s / 0.015s / 0.0312s / 0.0625s / 0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s (when PROFILE TYPE is set to GENERAL)

---

#### Initial value

0.5s (when PROFILE TYPE is set to ST2059)

2s (when PROFILE TYPE is set to AES67)

8s (when PROFILE TYPE is set to GENERAL)

---

### 13.3.10 Selecting the Delay Message Transmission Interval

When COMMUNICATION MODE is set to MIXED SMPTE w/o NE or MULTICAST, to select the delay message transmission interval, follow the procedure below.

|             |             |       |       |
|-------------|-------------|-------|-------|
| 3 . P T P 1 | D E L A Y   | M S G | I N T |
| ◆ *         | 0 . 1 2 5 s | 8 H z |       |

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > DELAY MSG INTERVAL

---

#### Parameters

0.0078s / 0.015s / 0.0312s / 0.0625s / 0.125s / 0.25s / 0.5s (when PROFILE TYPE is set to ST2059)

0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to AES67)

0.0078s / 0.015s / 0.0312s / 0.0625s / 0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to GENERAL)

---

#### Initial value

0.125s (when PROFILE TYPE is set to ST2059)

1s (when PROFILE TYPE is set to AES67 or GENERAL)

---

### 13.3.11 Selecting the Desired Delay Message Transmission Interval

When COMMUNICATION MODE is set to MIXED SMPTE or UNICAST, to select the interval at which you want the delay message to be transmitted to the connection leader, follow the procedure below.

|             |             |           |       |
|-------------|-------------|-----------|-------|
| 3 . P T P 1 | D L Y       | D E S I R | I N T |
| ◆ *         | 0 . 1 2 5 s | 8 H z     |       |

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > DLY MSG DESIRED INT

---

#### Parameters

0.0078s / 0.015s / 0.0312s / 0.0625s / 0.125s / 0.25s / 0.5s (when PROFILE TYPE is set to ST2059)

0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to AES67)

0.0078s / 0.015s / 0.0312s / 0.0625s / 0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to GENERAL)

---

#### Initial value

0.125s (when PROFILE TYPE is set to ST2059 or AES67)

2s (when PROFILE TYPE is set to GENERAL)

---

### 13.3.12 Selecting the Delay Message Reception Interval

When COMMUNICATION MODE is set to MIXED SMPTE or UNICAST, to select the minimum interval at which the follower can receive the delay message, follow the procedure below.

|             |         |         |       |
|-------------|---------|---------|-------|
| 3 . P T P 1 | D L Y   | R E Q D | I N T |
| ◀ *         | 0 . 5 s | 2 H z   |       |

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > DLY MSG REQD INT

---

#### Parameters

0.0078s / 0.015s / 0.0312s / 0.0625s / 0.125s / 0.25s / 0.5s (when PROFILE TYPE is set to ST2059)

0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to AES67)

0.0078s / 0.015s / 0.0312s / 0.0625s / 0.125s / 0.25s / 0.5s / 1s / 2s / 4s / 8s / 16s (when PROFILE TYPE is set to GENERAL)

---

#### Initial value

0.5s (when PROFILE TYPE is set to ST2059)

2s (when PROFILE TYPE is set to AES67)

8s (when PROFILE TYPE is set to GENERAL)

---

### 13.3.13 Setting the Announce Timeout

To set the number of announce messages used to judge whether a timeout occurs, follow the procedure below.

If the specified number of messages are not received consecutively at the interval specified by the leader, a timeout occurs.

|               |                 |
|---------------|-----------------|
| 3 . P T P 1   | A N N O U N C E |
| T I M E O U T | C O U N T : 3   |

#### Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > ANNOUNCE TIMEOUT

---

#### Parameters

---

2 - 10

---

#### Initial value

---

3

---

### 13.3.14 Selecting the Propagation Time Measurement Method

To select the propagation time measurement method, follow the procedure below.

```
3 . P T P 1   D E L A Y   M E C H A N I S M
▶ * E N D   T O   E N D
```

Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > DELAY MECHANISM

---

Parameters

---

END TO END / PEER TO PEER

---

Initial value

---

END TO END

---

### 13.3.15 Setting the IP Address

When COMMUNICATION MODE is set to MIXED SMPTE w/o NE or UNICAST, to set the IP address of the leader to connect to, follow the procedure below.

```
4 . P T P 1   A M T   A D D R E S S 1
0 0 0 . 0 0 0 . 0 0 0 . 0 0 0
```

Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > AMT CONFIGURATION >
PTP1 AMT ADDRESS1 - PTP AMT ADDRESS8

---

Parameters

---

000.000.000.000 - 255.255.255.255

---

Initial value

---

000.000.000.000

---

### 13.3.16 Setting the Asymmetric Delay

To correct the phase, follow the procedure below.

```
3 . P T P 1   A S Y M   D E L A Y
0 . 0 0 0   u s e c
```

Procedure

---

PTP CONFIG > PTP1 > DETAIL SETTING > ASYMMETRIC DELAY

---

Parameters

---

±20.000 usec

---

Initial value

---

0.000 usec

---

# 14 IP CONFIG MENU (SER04)

The IP CONFIG menu is used to specify settings related to IP output.

To display the IP CONFIG menu, press CONFIG several times until the following menu appears.

|                     |     |
|---------------------|-----|
| 0 . I P C O N F I G | ◀ ▶ |
| ▼ T Y P E           | ↓   |

For IP outputs, the patterns specified on the SDI CONFIG menu are output. For details of output patterns, see "12 SDI CONFIG MENU (SER02/SER04)".

## 14.1 Selecting the Standard

To select the IP output standard, follow the procedure below.

|                 |     |
|-----------------|-----|
| 1 . I P T Y P E | ◀ ▶ |
| ◀ * S T 2 1 1 0 | ↓   |

Procedure

---

IP CONFIG > TYPE

---

Parameters

---

|           |   |
|-----------|---|
| ST2022-6: | Outputs signals compliant with SMPTE ST 2022-6. |
| ST2110:   | Outputs signals compliant with SMPTE ST 2110.   |

---

Initial value

---

ST2110

---

## 14.2 Turning the IP Output On and Off

To turn the IP output on and off, follow the procedure below.

|   |                                |
|---|--------------------------------|
| 2 . I P 1 O U T P U T                   | ◀ ▶                            |
| <input checked="" type="checkbox"/> O N | <input type="checkbox"/> O F F |

Procedure

---

IP CONFIG > IP1 / IP2 > OUTPUT

---

Parameters

---

ON / OFF

---

Initial value

---

ON

---

### 14.3 Turning Video, Audio, and ANC On and Off

To turn the video, audio, and ANC on and off, follow the procedure below.  
When TYPE is set to ST2022-6, you can only turn the video on and off.

|           |               |                                |
|-----------|---------------|--------------------------------|
| 5 . I P 1 | S T R E A M 1 | V I D                          |
| ■ O N     |               | <input type="checkbox"/> O F F |
| 5 . I P 1 | S T R E A M 1 | A U D                          |
| ■ O N     |               | <input type="checkbox"/> O F F |
| 5 . I P 1 | S T R E A M 1 | A N C                          |
| ■ O N     |               | <input type="checkbox"/> O F F |

## Procedure

IP CONFIG > IP1 / IP2 > STREAM SETTING > STREAM1 / STREAM2 / STREAM3 / STREAM4 >  
VIDEO / AUDIO / ANC > ON / OFF

## Parameters

ON / OFF

### Initial value

ON

## 14.4 Setting the Payload Types

When TYPE is set to ST2110, to set the video, audio, and ANC payload types, follow the procedure below.

|           |               |       |           |
|-----------|---------------|-------|-----------|
| 5 . I P 1 | S T R E A M 1 | V I D | P A Y L D |
| 9 6       |               |       |           |
| 5 . I P 1 | S T R E A M 1 | A U D | P A Y L D |
| 9 7       |               |       |           |
| 5 . I P 1 | S T R E A M 1 | A N C | P A Y L D |
| 1 0 0     |               |       |           |

## Procedure

IP CONFIG > IP1 / IP2 > STREAM SETTING > STREAM1 / STREAM2 / STREAM3 / STREAM4 >  
VIDEO / AUDIO / ANC > PAYLOAD TYPE

## Parameters

96 - 127

### Initial value

96 (VIDEO)

97 (AUDIO)

100 (ANC)

## 14.5 Configuring VLAN

### 14.5.1 Turning the VLAN Signals On and Off

To turn the video, audio, and ANC VLANs (Virtual Local Area Networks) on and off, follow the procedure below.

When TYPE is set to ST2022-6, you can turn only the video VLAN on and off.

|  |
|--|
| 6 . I P 1    S T R E A M 1    V I D    V L A N                         |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

|  |
|--|
| 6 . I P 1    S T R E A M 1    A U D    V L A N                         |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

|  |
|--|
| 6 . I P 1    S T R E A M 1    A N C    V L A N                         |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

#### Procedure

---

IP CONFIG > IP1 / IP2 > STREAM SETTING > STREAM1 / STREAM2 / STREAM3 / STREAM4 > VIDEO / AUDIO / ANC > VLAN > ON/OFF

---

#### Parameters

---

ON / OFF

---

#### Initial value

---

OFF

---

### 14.5.2 Setting the VLAN Tags

To set the video, audio, and ANC VLAN (Virtual Local Area Network) tags, follow the procedure below.

When TYPE is set to ST2022-6, you can set only the video VLAN tag.

|  |
|--|
| 6 . I P 1    S T R E A M 1    V I D    V L A N |
| 1  |

|  |
|--|
| 6 . I P 1    S T R E A M 1    A U D    V L A N |
| 1  |

|  |
|--|
| 6 . I P 1    S T R E A M 1    A N C    V L A N |
| 1  |

#### Procedure

---

IP CONFIG > IP1 / IP2 > STREAM SETTING > STREAM1 / STREAM2 / STREAM3 / STREAM4 > VIDEO / AUDIO / ANC > VLAN > VLAN TAG

---

#### Parameters

---

1 - 4094

---

#### Initial value

---

1

---

## 14.6 Configuring DSCP

### 14.6.1 Turning the DSCP On and Off

To turn the video, audio, and ANC DSCPs (Differentiated Services Code Points) on and off, follow the procedure below.

When TYPE is set to ST2022-6, you can turn only the video DSCP on and off.

|   |
|---|
| 6 . I P 1    S T R E A M 1    V I D    D S C P            |
| <input type="checkbox"/> O N                      ■ O F F |

|   |
|---|
| 6 . I P 1    S T R E A M 1    A U D    D S C P            |
| <input type="checkbox"/> O N                      ■ O F F |

|   |
|---|
| 6 . I P 1    S T R E A M 1    A N C    D S C P            |
| <input type="checkbox"/> O N                      ■ O F F |

#### Procedure

---

IP CONFIG > IP1 / IP2 > STREAM SETTING > STREAM1 / STREAM2 / STREAM3 / STREAM4 > VIDEO / AUDIO / ANC > DSCP > ON/OFF

---

#### Parameters

---

ON / OFF

---

#### Initial value

---

OFF

---

### 14.6.2 Setting the DSCP Tags

To set the video, audio, and ANC DSCP (Differentiated Services Code Point) tags, follow the procedure below.

When TYPE is set to ST2022-6, you can set only the video DSCP tag.

|  |
|--|
| 6 . I P 1    S T R E A M 1    V I D    D S C P |
| 0  |

|  |
|--|
| 6 . I P 1    S T R E A M 1    A U D    D S C P |
| 0  |

|  |
|--|
| 6 . I P 1    S T R E A M 1    A N C    D S C P |
| 0  |

#### Procedure

---

IP CONFIG > IP1 / IP2 > STREAM SETTING > STREAM1 / STREAM2 / STREAM3 / STREAM4 > VIDEO / AUDIO / ANC > DSCP > DSCP TAG

---

#### Parameters

---

0 - 63

---

#### Initial value

---

0

---

## 14.7 Setting the Destination IP Addresses

To set the video, audio, and ANC destination IP addresses, follow the procedure below.

When TYPE is set to ST2022-6, you can set only the video IP address.

|  |
|--|
| 5 . I P 1    S T R E A M 1    V I D    D S T I P |
| 2 3 9 . 0 0 0 . 0 0 0 . 0 0 1                    |

|  |
|--|
| 5 . I P 1    S T R E A M 1    A U D    D S T I P |
| 2 3 9 . 0 0 0 . 0 0 2 . 0 0 1                    |

|  |
|--|
| 5 . I P 1    S T R E A M 1    A N C    D S T I P |
| 2 3 9 . 0 0 0 . 0 0 3 . 0 0 1                    |

### Procedure

---

IP CONFIG > IP1 / IP2 > STREAM SETTING > STREAM1 / STREAM2 / STREAM3 / STREAM4 >  
VIDEO / AUDIO / ANC > DESTINATION IP ADDRESS

---

### Parameters

---

000.000.000.000 - 255.255.255.255

---

### Initial value

|   |   |
|---|---|
| 239.000.000.001 (IP1 / STREAM1 / VIDEO) | 239.000.000.005 (IP2 / STREAM1 / VIDEO) |
| 239.000.000.002 (IP1 / STREAM2 / VIDEO) | 239.000.000.006 (IP2 / STREAM2 / VIDEO) |
| 239.000.000.003 (IP1 / STREAM3 / VIDEO) | 239.000.000.007 (IP2 / STREAM3 / VIDEO) |
| 239.000.000.004 (IP1 / STREAM4 / VIDEO) | 239.000.000.008 (IP2 / STREAM4 / VIDEO) |
| 239.000.002.001 (IP1 / STREAM1 / AUDIO) | 239.000.002.005 (IP2 / STREAM1 / AUDIO) |
| 239.000.002.002 (IP1 / STREAM2 / AUDIO) | 239.000.002.006 (IP2 / STREAM2 / AUDIO) |
| 239.000.002.003 (IP1 / STREAM3 / AUDIO) | 239.000.002.007 (IP2 / STREAM3 / AUDIO) |
| 239.000.002.004 (IP1 / STREAM4 / AUDIO) | 239.000.002.008 (IP2 / STREAM4 / AUDIO) |
| 239.000.003.001 (IP1 / STREAM1 / ANC)   | 239.000.003.005 (IP2 / STREAM1 / ANC)   |
| 239.000.003.002 (IP1 / STREAM2 / ANC)   | 239.000.003.006 (IP2 / STREAM2 / ANC)   |
| 239.000.003.003 (IP1 / STREAM3 / ANC)   | 239.000.003.007 (IP2 / STREAM3 / ANC)   |
| 239.000.003.004 (IP1 / STREAM4 / ANC)   | 239.000.003.008 (IP2 / STREAM4 / ANC)   |

---

## 14.8 Setting the Destination Port Numbers

To set the video, audio, and ANC destination port numbers, follow the procedure below.  
When TYPE is set to ST2022-6, you can set only the video port number.

|  |
|--|
| 5 . I P 1    S T R E A M 1    V I D    D S T P T |
| 5 0 0 4  |

|  |
|--|
| 5 . I P 1    S T R E A M 1    A U D    D S T P T |
| 5 0 0 4  |

|  |
|--|
| 5 . I P 1    S T R E A M 1    A N C    D S T P T |
| 5 0 0 4  |

### Procedure

---

IP CONFIG > IP1 / IP2 > STREAM SETTING > STREAM1 / STREAM2 / STREAM3 / STREAM4 >  
VIDEO / AUDIO / ANC > DESTINATION PORT

---

### Parameters

---

0 - 65535

---

### Initial value

---

5004

---

## 14.9 Selecting the Audio Standard

When TYPE is set to ST2110, to select the audio output standard, follow the procedure below.

|  |
|--|
| 5 . I P 1    S T R E A M 1    A U D    M O D E |
| ► * S T 2 1 1 0 - 3 0                          |

### Procedure

---

IP CONFIG > IP1 / IP2 > STREAM SETTING > STREAM1 / STREAM2 / STREAM3 / STREAM4 >  
AUDIO > MODE

---

### Parameters

---

ST2110-30 / ST2110-31

---

### Initial value

---

ST2110-30

---

## 14.10 Selecting the Audio Packet Time

When TYPE is set to ST2110, to select the audio output packet time, follow the procedure below.

|  |
|--|
| 5 . I P 1    S T R E A M 1    A U D    T I M E |
| ▶ * 1 m s                                      |

Procedure

---

IP CONFIG > IP1 / IP2 > STREAM SETTING > STREAM1 / STREAM2 / STREAM3 / STREAM4 >  
AUDIO > PACKET TIME

---

Parameters

---

1ms / 125us

---

Initial value

---

1ms

---

## 14.11 Configuring NMOS

Among the NMOS (Networked Media Open Specifications) settings, the node label, device label, and IS-04 domain name cannot be set from the LT4670 menu. They can only be set using a web browser. For details, see "18.4.8 IP Screen (SER04)".

### 14.11.1 Turning the NMOS On and Off

To turn the NMOS control on and off, follow the procedure below.

|  |
|--|
| 3 . S E T U P    N M O S   |
| <input checked="" type="checkbox"/> O N <input type="checkbox"/> O F F |

Procedure

---

IP CONFIG > NMOS > SETUP > NMOS

---

Parameters

---

ON / OFF

---

Initial value

---

ON

---

### 14.11.2 Selecting the Node API Version

To select the Node API version of the IS-04, follow the procedure below.

|   |                                |
|---|--------------------------------|
| 3 . N O D E   A P I                       |                                |
| <input checked="" type="checkbox"/> V 1 2 | <input type="checkbox"/> V 1 3 |

#### Procedure

---

IP CONFIG > NMOS > IS04 > NODE API

---

#### Parameters

|      |                           |
|------|---------------------------|
| V12: | Version 1.2 is supported. |
| V13: | Version 1.3 is supported. |

---

#### Initial value

---

V12

---

### 14.11.3 Setting the IS-04 Port Number

To set the IS-04 port number, follow the procedure below.

|                           |  |
|---------------------------|--|
| 3 . P O R T   N U M B E R |  |
| 3 0 0 0                   |  |

#### Procedure

---

IP CONFIG > NMOS > IS04 > PORT NUMBER

---

#### Parameters

---

0 - 65535

---

#### Initial value

---

3000

---

### 14.11.4 Selecting the DNS-SD Communication Mode

To select the DNS-SD (Domain Name System - Service Discovery) communication mode of the IS-04, follow the procedure below.

|   |  |
|---|--|
| 3 . D N S - S D   |  |
| <input checked="" type="checkbox"/> * M U L T I C A S T |  |

#### Procedure

---

IP CONFIG > NMOS > IS04 > DNS-SD

---

#### Parameters

---

MULTICAST / UNICAST / MANUAL

---

#### Initial value

---

MULTICAST

---

#### 14.11.5 Setting the DNS-SD IP Address

When DNS-SD is set to MANUAL, to set the DNS-SD IP address of the IS-04, follow the procedure below.

|   |
|---|
| 3 . D N S - S D    I P    A D D R E S S |
| 1 9 2 . 1 6 8 . 0 0 0 . 0 0 1           |

##### Procedure

---

IP CONFIG > NMOS > IS04 > DNS-SD IP ADDRESS

---

##### Parameters

---

000.000.000.000 - 255.255.255.255

---

##### Initial value

---

192.168.000.001

---

#### 14.11.6 Setting the DNS-SD Port Number

When DNS-SD is set to UNICAST or MANUAL, to set the DNS-SD port number of the IS-04, follow the procedure below.

|   |
|---|
| 3 . D N S - S D    P O R T    N U M B E R |
| 8 0 8 0                                   |

##### Procedure

---

IP CONFIG > NMOS > IS04 > DNS-SD PORT NUMBER

---

##### Parameters

---

0 - 65535

---

##### Initial value

---

8080

---

#### 14.11.7 Turning the Serial Number On and Off

To turn the LT4670 serial number in the IS-04 resource information on and off, follow the procedure below.

|  |
|--|
| 3 . S E R I A L    L A B E L   |
| <input checked="" type="checkbox"/> O N <input type="checkbox"/> O F F |

##### Procedure

---

IP CONFIG > NMOS > IS04 > SERIAL LABEL

---

##### Parameters

---

ON / OFF

---

##### Initial value

---

ON

---

# 15 SYSTEM CONFIG MENU

The SYSTEM CONFIG menu is used to specify settings related to the instrument.

To display the SYSTEM CONFIG menu, press CONFIG several times until the following menu appears.

These settings are not stored to presets.

## 15.1 Setting the Backlight

To set the backlight, follow the procedure below.

### Procedure

---

SYSTEM CONFIG > LCD BACKLIGHT

---

### Parameters

---

|           |   |
|-----------|---|
| ON:       | The backlight is on at all times.   |
| AUTO OFF: | The backlight turns off if none of the keys are used for 30 seconds. It turns back on when a key is used. |
| OFF:      | The backlight is off at all times.  |

---

### Initial value

---

ON

---

## 15.2 Configuring Presets

Under PRESET on the SYSTEM CONFIG menu, you can configure presets.

A preset is a collection of instrument settings that are registered. It can be recalled automatically when the instrument starts.

The following items are not stored in preset settings.

- SDI CONFIG > User patterns saved in the instrument (INT1 - INT4)
- SDI CONFIG > ID characters saved in the instrument (INT1 - INT4)
- SDI CONFIG > Logos stored in the instrument (INT1 - INT4)
- Settings of the SYSTEM CONFIG menu

### 15.2.1 Recalling Presets

To recall a preset that has been stored with the STORE menu, follow the procedure below.

#### Procedure

---

SYSTEM CONFIG > PRESET > RECALL

---

To recall a preset, follow the procedure below.

**1. Select a preset number.**

Select a number from NUMBER 0 to NUMBER 9.

If a comment was added on the COMMENT INPUT menu, the comment is also displayed.

With no comment

|                    |
|--------------------|
| 2 . R E C A L L    |
| ► N U M B E R    0 |

With a comment

|   |
|---|
| 2 . R E C A L L    N U M B E R    0           |
| ► N A M E [ R E F = B B , T I M E = G N S S ] |

**2. Select OK.**

|  |
|--|
| 3 . R E C A L L    N U M B E R    0      |
| ■ O K                      □ C A N C E L |

### 15.2.2 Storing Presets

You can save up to 10 presets by following the procedure below.

#### Procedure

---

SYSTEM CONFIG > PRESET > STORE

---

To store a preset, follow the procedure below.

**1. Select a preset number.**

Select a number from NUMBER 0 to NUMBER 9.

|                    |
|--------------------|
| 2 . S T O R E      |
| ► N U M B E R    0 |

**2. Select OK.**

|  |
|--|
| 3 . S T O R E    N U M B E R    0        |
| ■ O K                      □ C A N C E L |

If the preset is already stored, an overwrite confirmation message is displayed.

To overwrite it, select OK. Otherwise, select CANCEL.

|  |
|--|
| 3 . N U M B E R    0    O V E R    W R I T E ? |
| ■ O K                      □ C A N C E L       |

### 15.2.3 Adding a Comment

To add a comment to a preset stored with the STORE menu, follow the procedure below. The comment added here can be displayed when you recall the preset with the RECALL menu or when you copy it from the instrument to a USB memory device.

#### Procedure

---

SYSTEM CONFIG > PRESET > POWER ON RECALL

---

#### Parameters

```
◀ 0 1 2 3 4 5 6 7 8 9 A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
a b c d e f g h i j k l m n o p q r s t u v w x y z ! # $ % & ' ( ) + , - . ; = @ [ ] ^ _ { }
```

---

#### Initial value

```
◀
```

---

To enter a comment, follow the procedure below.

#### 1. Select a preset number.

Select a number from NUMBER 0 to NUMBER 9.

2 . C O M M E N T   I N P U T
   
▶ N U M B E R   0

#### 2. Enter a comment.

You can enter up to 17 characters.

Enter ◀ to clear the characters that follow it. In this case, ◀ is not included in the comment. Enter only ◀ to erase the comment.

3 . C O M M E N T   I N P U T   N U M B E R   0
   
R E F = B B , T I M E = G N S S ▶

### 15.2.4 Power-on Settings

To select the settings to use for starting the instrument, follow the procedure below.

2 . P O W E R   O N   R E C A L L
   
▶ \* O F F

#### Procedure

---

SYSTEM CONFIG > PRESET > POWER ON RECALL

---

#### Parameters

|                       |   |
|-----------------------|---|
| OFF:                  | The instrument starts with the same settings that were set when it was last turned OFF. |
| NUMBER 0 to NUMBER 9: | The instrument starts with the selected preset.   |

---

#### Initial value

---

OFF

---

### 15.2.5 Copying Presets from a USB Memory Device to the Instrument

To copy presets from a USB memory device to the instrument, follow the procedure below. This feature is useful when you want to use multiple instruments with the same settings. (Copy the presets to the USB memory device in advance by using the COPY INT→USB menu.)

If there is already a preset stored in the instrument, it will be overwritten.

This setting appears when a USB memory device is connected.

#### Procedure

---

SYSTEM CONFIG > PRESET > COPY USB→INT

---

To copy a preset, follow the procedure below.

#### 1. Select the copy source in the USB memory device.

Select ALL or a number from NUMBER 0 to NUMBER 9.

|                                |
|--------------------------------|
| 2 . C O P Y    U S B → I N T   |
| <input type="checkbox"/> A L L |

#### 2. Select OK.

|  |
|--|
| 3 . C O P Y    U S B → I N T    A L L  |
| <input checked="" type="checkbox"/> O K <input type="checkbox"/> C A N C E L |

#### ● USB Memory Device Structure

Presets are copied from the PSET folder of the USB memory device.

The "\_\*\*\*\*" portion of each file name is added if you add a comment to the preset.

Note that if you use a PC to edit the name of a file, you will no longer be able to copy the file.

- USB memory device
- └ ■ LT4670\_USER
- └ ■ PSET
  - ├ ■ PRESET\_00\_\*\*\*\*.TXT (\*1)
  - | :
  - └ ■ PRESET\_09\_\*\*\*\*.TXT (\*1)

\*1 You can also use the extension ".PRE" instead of ".TXT".

If there are both ".TXT" and ".PRE" files for the same preset number, copy ".PRE".

### 15.2.6 Copying Presets from the Instrument to a USB Memory Device

To copy presets in TXT format from the instrument to a USB memory device, follow the procedure below. This feature is useful when you want to use multiple instruments with the same settings. (Save the presets in the instrument in advance by using the STORE menu.)

If there is already a preset with the same number in the USB memory device, it will be overwritten. (It will be overwritten even if the comment is different.)

This setting appears when a USB memory device is connected.

#### Procedure

---

SYSTEM CONFIG > PRESET > COPY INT→USB

---

To copy a preset, follow the procedure below.

**1. Select the copy source in the instrument.**

Select ALL or a number from NUMBER 0 to NUMBER 9.

|                              |
|------------------------------|
| 2 . C O P Y    I N T → U S B |
| ◀ A L L                      |

**2. Select OK.**

|  |
|--|
| 3 . C O P Y    I N T → U S B    A L L    |
| ■ O K                      □ C A N C E L |

● **USB Memory Device Structure**

Presets are copied from the PSET folder of the USB memory device.

The date and time of the file will be the date and time selected with TIME SOURCE on the REFERENCE CONFIG menu.

The "\_\*\*\*\*" portion of each file name is added if you add a comment to the preset.

- USB memory device
- └ ■ LT4670\_USER
  - └ ■ PSET
    - └ ■ PRESET\_00\_\*\*\*\*.TXT (\*1)
    - | :
    - └ ■ PRESET\_09\_\*\*\*\*.TXT (\*1)

\*1 Depending on the presets stored in the LT4670, files with the extension ".PRE" may be copied. "PRE" can be handled in the same way as ".TXT".

### 15.2.7 Clearing Presets

To clear presets stored in the instrument, follow the procedure below.

#### Procedure

---

SYSTEM CONFIG > PRESET > DELETE

---

To clear a preset, follow the procedure below.

**1. Select the preset to clear.**

Select ALL or a number from NUMBER 0 to NUMBER 9.

|                               |
|-------------------------------|
| 2 . P R E S E T   D E L E T E |
| ◀ A L L                       |

**2. Select OK.**

|                                       |
|---------------------------------------|
| 3 . D E L E T E   A L L               |
| ■ O K                   □ C A N C E L |

## 15.3 Setting the Network

Under NETWORK on the SYSTEM CONFIG menu, you can set the network function.

|                               |   |
|-------------------------------|---|
| 0 . S Y S T E M   C O N F I G | ↔ |
| ◆ N E T W O R K               | ↓ |

### 15.3.1 Setting the Network

To select whether to enable the network function, follow the procedure below.

|                                    |
|------------------------------------|
| 2 . N E T W O R K   S E T U P      |
| ■ E N A B L E      □ D I S A B L E |

#### Procedure

---

SYSTEM CONFIG > NETWORK > NETWORK SETUP

---

#### Parameters

---

ENABLE / DISABLE

---

#### Initial value

---

ENABLE

---

### 15.3.2 Setting the IP Address

To set the IP address, follow the procedure below.

|                               |
|-------------------------------|
| 3 . I P     A D D R E S S     |
| 1 9 2 . 1 6 8 . 0 0 0 . 0 0 1 |

Procedure

---

SYSTEM CONFIG > NETWORK > ETHERNET > IP ADDRESS

---

Parameters

---

000.000.000.000 - 255.255.255.255

---

Initial value

---

192.168.000.001

---

### 15.3.3 Setting the Subnet Mask

To set the subnet mask, follow the procedure below.

|                               |
|-------------------------------|
| 3 . S U B N E T   M A S K     |
| 2 5 5 . 2 5 5 . 2 5 5 . 0 0 0 |

Procedure

---

SYSTEM CONFIG > NETWORK > ETHERNET > SUBNET MASK

---

Parameters

---

000.000.000.000 - 255.255.255.255

---

Initial value

---

255.255.255.000

---

### 15.3.4 Setting the Default Gateway

To set the default gateway, follow the procedure below.

|                                   |
|-----------------------------------|
| 3 . D E F A U L T   G A T E W A Y |
| 0 0 0 . 0 0 0 . 0 0 0 . 0 0 0     |

Procedure

---

SYSTEM CONFIG > NETWORK > ETHERNET > DEFAULT GATEWAY

---

Parameters

---

000.000.000.000 - 255.255.255.255

---

Initial value

---

000.000.000.000

---

### 15.3.5 Configuring SNMP

To select whether to enable or disable the SNMP function and select which version to support, follow the procedure below.

## 3 . S N M P    S E T U P

■ D I S A B L E     V 2 C     V 3

## Procedure

SYSTEM CONFIG > NETWORK > SNMP > SNMP SETUP

## Parameters

- DISABLE: The SNMP function is disabled.
- V2C: The SNMP function is enabled and V2C is supported.
- V3: The SNMP function is enabled and V3 is supported.

### Initial value

## DISABLE

### 15.3.6 Displaying the SNMP Engine ID

When SNMP SETUP is V3, to display the SNMP engine ID, follow the procedure below.

```
3 . S N M P   E N G I N E   I D  
0 x 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
```

## Procedure

SYSTEM CONFIG > NETWORK > SNMP > SNMP ENGINE ID

### 15.3.7 Setting the SNMP Trap Transmission Destinations

To select whether to enable the four SNMP trap transmission destinations, follow the procedure below.

To alleviate communication load, disable the transmission destinations that you are not using.

3 . S N M P T R A P 1  
□ E N A B L E ■ D I S A B L E

## Procedure

SYSTEM CONFIG > NETWORK > SNMP > SNMP TRAP 1 - SNMP TRAP 4

## Parameters

## ENABLE / DISABLE

## Initial value

## DISABLE

### 15.3.8 Setting the IP Addresses of the SNMP Trap Transmission Destinations

To set the IP addresses of the four SNMP trap transmission destinations, follow the procedure below.

|  |
|--|
| 3 . S N M P    M A N A G E R    I P    1 |
| 0 0 0 . 0 0 0 . 0 0 0 . 0 0 0            |

#### Procedure

---

SYSTEM CONFIG > NETWORK > SNMP > SNMP MANAGER IP 1 - SNMP MANAGER IP 4

---

#### Parameters

---

000.000.000.000 - 255.255.255.255

---

#### Initial value

---

000.000.000.000

---

### 15.3.9 Copying MIB Files from the Instrument to a USB Memory Device

To copy a MIB file from the instrument to a USB memory device, select ON by following the procedure below.

If there is already a MIB file stored in the USB memory device, it will be overwritten.  
This setting appears when a USB memory device is connected.

|   |
|---|
| 3 . C O P Y    M I B    I N T → U S B                           |
| <input type="checkbox"/> O K                      ■ C A N C E L |

#### Procedure

---

SYSTEM CONFIG > NETWORK > SNMP > COPY MIB INT→USB

---

#### ● USB Memory Device Structure

The MIB file is saved in the MIB folder of the USB memory device.

The date and time of the file will be the date and time selected with TIME SOURCE on the REFERENCE CONFIG menu.

- USB memory device
  - └ ■ LT4670\_USER
    - └ ■ MIB
      - └ ■ lt4670.my

### 15.3.10 Setting the SNMP Community Names

When SNMP SETUP is V2C, to change each SNMP community name, follow the procedure below.

You can enter up to 15 characters. Enter **◀** to clear the characters that follow it. In this case, **◀** is not included in the community name.

When SNMP SETUP is V3, to display each SNMP community name, follow the procedure below. You cannot change it.

Changes to community names are applied when SNMP RESTART is executed or the next time the power is turned on.

4 . R E A D C O M M U N I T Y

L D R U s e r **◀**

4 . W R I T E C O M M U N I T Y

L D R A d m **◀**

4 . T R A P C O M M U N I T Y

L D R U s e r **◀**

#### Procedure

---

SYSTEM CONFIG > NETWORK > SNMP > SNMP COMMUNITY

> READ COMMUNITY

> WRITE COMMUNITY

> TRAP COMMUNITY

---

#### Parameters

---

**◀** 0 1 2 3 4 5 6 7 8 9 A B C D E F G H I J K L M N O P Q R S T U V W X Y Z  
a b c d e f g h i j k l m n o p q r s t u v w x y z

---

#### Initial value

---

LDRUser**◀** (V2C, READ COMMUNITY)

LDRAdm**◀** (V2C, WRITE COMMUNITY)

LDRUser**◀** (V2C, TRAP COMMUNITY)

LDuser (V3, READ COMMUNITY)

LDadm (V3, WRITE COMMUNITY)

LDuser (V3, TRAP COMMUNITY)

---

### 15.3.11 Restarting SNMP

When SNMP SETUP is V2C or V3, to restart SNMP, select OK by following the procedure below. Do so after changing community names, for example.

4 . S N M P R E S T A R T

O K

**■ C A N C E L**

#### Procedure

---

SYSTEM CONFIG > NETWORK > SNMP > SNMP COMMUNITY > SNMP RESTART

---

### 15.3.12 Configuring HTTP

To select whether to enable the HTTP function, follow the procedure below.

|  |
|--|
| 3 . H T T P   S E T U P  |
| <input checked="" type="checkbox"/> D I S A B L E <input type="checkbox"/> E N A B L E |

Procedure

---

SYSTEM CONFIG > NETWORK > HTTP > HTTP SETUP

---

Parameters

---

DISABLE / ENABLE

---

Initial value

---

DISABLE

---

### 15.3.13 Configuring the Web Browser

To select whether to enable the Web browser function, follow the procedure below.

|  |
|--|
| 3 . W E B   B R O W S E R  |
| <input type="checkbox"/> E N A B L E <input checked="" type="checkbox"/> D I S A B L E |

Procedure

---

SYSTEM CONFIG > NETWORK > HTTP > WEB BROWSER

---

Parameters

---

ENABLE / DISABLE

---

Initial value

---

DISABLE

---

### 15.3.14 Configuring the Web Authentication

When WEB BROWSER is set to ENABLE, to select whether to enable Web authentication, follow the procedure below.

|                                       |   |
|---------------------------------------|---|
| 3 . W E B A U T H E N T I C A T I O N |   |
| <input type="checkbox"/> E N A B L E  | <input checked="" type="checkbox"/> D I S A B L E |

#### Procedure

SYSTEM CONFIG > NETWORK > HTTP > WEB AUTHENTICATION

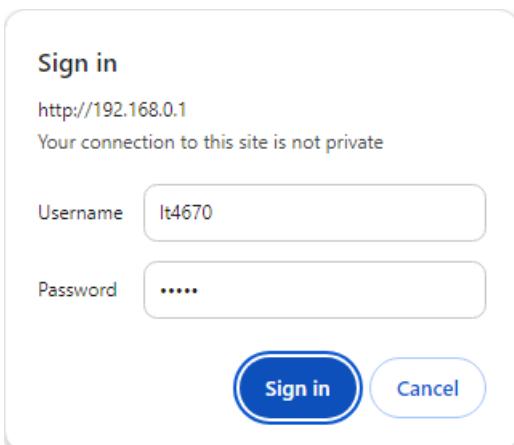

#### Parameters

ENABLE / DISABLE

#### Initial value

DISABLE

When Web authentication is enabled, a Username and Password are required to connect to the LT4670 from a Web browser. The factory default Username is "lt4670" and the Password is "admin". The Username is fixed, but the Password can be changed using WEB PASSWORD, described in the next section. When using web authentication, we recommend changing the password.

### 15.3.15 Setting the Web Password

When WEB AUTHENTICATION is set to ENABLE, to set a Web password, follow the procedure below.

The ◀ is a symbol that is not part of the password, and when entered, the following characters will disappear.

|                             |
|-----------------------------|
| 3 . W E B   P A S S W O R D |
| a d m i n ▲                 |

#### Procedure

---

SYSTEM CONFIG > NETWORK > HTTP > WEB PASSWORD

---

#### Parameters

---

◀ 0 1 2 3 4 5 6 7 8 9 A B C D E F G H I J K L M N O P Q R S T U V W X Y Z  
a b c d e f g h i j k l m n o p q r s t u v w x y z (up to 15 characters)

---

#### Initial value

---

admin◀

---

### 15.3.16 Configuring NTP

To select whether to enable the NTP function, follow the procedure below.

|   |
|---|
| 3 . N T P   S E T U P                                     |
| <input type="checkbox"/> E N A B L E      ■ D I S A B L E |

#### Procedure

---

SYSTEM CONFIG > NETWORK > NTP > NTP SETUP

---

#### Parameters

---

ENABLE / DISABLE

---

#### Initial value

---

DISABLE

---

### 15.3.17 Setting the NTP Server

When LT4670 is an NTP client, to set the NTP server address to connect, follow the procedure below.

|   |
|---|
| 3 . N T P   S E R V E R   A D D R E S S |
| 0 0 0 . 0 0 0 . 0 0 0 . 0 0 0           |

#### Procedure

---

SYSTEM CONFIG > NETWORK > NTP > NTP SERVER ADDRESS

---

#### Parameters

---

000.000.000.000 - 255.255.255.255

---

#### Initial value

---

000.000.000.000

---

### 15.3.18 Setting the NTP Network

When LT4670 is an NTP server, to select the network settings, follow the procedure below.

|  |
|--|
| 3 . N T P   R E S T R I C T I O N S  |
| <input checked="" type="checkbox"/> L O C A L <input type="checkbox"/> F R E E |

#### Procedure

---

SYSTEM CONFIG > NETWORK > NTP > NTP RESTRICTIONS

---

#### Parameters

|        |                                |
|--------|--------------------------------|
| LOCAL: | Use NTP on the same network.   |
| FREE:  | Use NTP in different networks. |

---

#### Initial value

---

LOCAL

---

### 15.3.19 Setting the NTP Stratum

To set the NTP stratum, follow the procedure below.

|                           |
|---------------------------|
| 3 . N T P   S T R A T U M |
| 8                         |

#### Procedure

---

SYSTEM CONFIG > NETWORK > NTP > NTP STRATUM

---

#### Parameters

---

2 - 15

---

#### Initial value

---

8

---

## 15.4 Setting the Time

Under TIME MANAGEMENT on the SYSTEM CONFIG menu, you can set the time.

|                                 |   |
|---------------------------------|---|
| 0 . S Y S T E M   C O N F I G   | ↔ |
| ◆ T I M E   M A N A G E M E N T | ↓ |

### 15.4.1 Setting the Date and Time

When TIME SOURCE on the REFERENCE CONFIG menu is set to INTERNAL, to set the internal date and time of the instrument, follow the procedure below.

These settings are not initialized with CLEAR SETTING or DEFAULT SETTING.

|   |
|---|
| 2 . I N T E R N A L   C L O C K   A D J U S T |
| 2 0 2 3 / 0 4 / 0 1   0 0 : 0 0 : 0 0         |

#### Procedure

---

SYSTEM CONFIG > TIME MANAGEMENT > INTERNAL CLOCK ADJUST

---

#### Parameters

---

2000/01/01 00:00:00 - 2037/12/31 23:59:59

---

### 15.4.2 Selecting the Time Zone

To select the time zone, follow the procedure below. Select it according to your region.

|                                   |
|-----------------------------------|
| 2 . T I M E Z O N E   O F F S E T |
| ◆ * U T C + 0 9 : 0 0             |

#### Procedure

---

SYSTEM CONFIG > TIME MANAGEMENT > TIMEZONE OFFSET

---

#### Parameters

---

-12:00 / -11:00 / -10:00 / -09:00 / -08:00 / -07:00 / -06:00 / -05:00 / -04:00 /  
 -03:00 / -02:00 / -01:00 / +00:00 / +01:00 / +02:00 / +03:00 / +04:00 / +04:30 /  
 +05:00 / +05:30 / +06:00 / +07:00 / +08:00 / +09:00 / +09:30 / +10:00 / +11:00 /  
 +12:00 / -09:30 / -03:30 / +03:30 / +06:30 / +10:30

---

#### Initial value

---

+09:00

---

### 15.4.3 Turning Jam Sync On and Off

To turn the jam sync function on and off, follow the procedure below.

When set to ON, the time code is reset once a day at the time set on the ADJUST menu.

|  |
|--|
| 3 . J A M   S Y N C  |
| <input checked="" type="checkbox"/> O N <input type="checkbox"/> O F F |

Procedure

---

SYSTEM CONFIG > TIME MANAGEMENT > JAM SYNC > ON/OFF

---

Parameters

---

ON / OFF

---

Initial value

---

ON

---

### 15.4.4 Setting the Jam Sync Time

To set when to reset the time code using the jam sync function, follow the procedure below.

This setting is valid when JAM SYNC is set to ON.

|                                       |
|---------------------------------------|
| 3 . J A M   S Y N C   A D J U S T     |
| 0 0 : 0 0 : 0 0   [ H H : M M : S S ] |

Procedure

---

SYSTEM CONFIG > TIME MANAGEMENT > JAM SYNC > ADJUST

---

Parameters

---

00:00:00 - 23:59:59

---

Initial value

---

00:00:00

---

### 15.4.5 Turning the Daylight Saving Time On and Off (SER01)

When TIME SOURCE on the REFERENCE CONFIG menu is set to GNSS, to select whether to apply Daylight Saving Time, follow the procedure below.

|  |
|--|
| 3 . D A Y L I G H T   S A V I N G                                      |
| <input type="checkbox"/> O N <input checked="" type="checkbox"/> O F F |

Procedure

---

SYSTEM CONFIG > TIME MANAGEMENT > DAYLIGHT SAVING > ON/OFF

---

Parameters

---

ON / OFF

---

Initial value

---

OFF

---

### 15.4.6 Setting the Daylight Saving Format (SER01)

When TIME SOURCE on the REFERENCE CONFIG menu is set to GNSS, to select the Daylight Saving format, follow the procedure below.

```
3 . S E L E C T   F O R M A T
▶ * 1 / 1   0 0 : 0 0 : 0 0
```

#### Procedure

---

SYSTEM CONFIG > TIME MANAGEMENT > DAYLIGHT SAVING > SELECT FORMAT

---

#### Parameters

|                       |   |
|-----------------------|---|
| 1/1 00:00:00:         | Set the daylight saving time by month, day, hour, and minute.           |
| 1st Sun,Jan 00:00 AM: | Set the daylight saving time by week, day of the week, month, and hour. |

---

#### Initial value

---

1/1 00:00:00

---

### 15.4.7 Setting the Daylight Saving Time Start Date (SER01)

When TIME SOURCE on the REFERENCE CONFIG menu is set to GNSS, to set the Daylight Saving Time start date, follow the procedure below.

SELECT FORMAT = 1/1 00:00:00

```
3 . C H A N G E   D A Y
    0 1 / 0 1   0 0 : 0 0 : 0 0
```

SELECT FORMAT = 1st Sun,Jan|00:00 AM

```
3 . C H A N G E   D A Y
    1 s t   S u n , J a n | 0 0 : 0 0   A M
```

#### Procedure

---

SYSTEM CONFIG > TIME MANAGEMENT > DAYLIGHT SAVING > CHANGE DAY

---

#### Parameters (SELECT FORMAT = 1/1 00:00:00)

---

01/01 00:00:00 - 12/31 23:59:00 (You cannot set seconds.)

---

#### Parameters (SELECT FORMAT = 1st Sun,Jan|00:00 AM)

|                     |  |
|---------------------|--|
| 1st - 5th           | Set the week                           |
| Sun - Sat           | Set the day of the week                |
| Jan - Dec           | Set the month                          |
| 00:00 AM - 11:00 PM | Set the time (You cannot set minutes.) |

---

#### Initial value

|                      |  |
|----------------------|--|
| 01/01 00:00:00       | (SELECT FORMAT = 1/1 00:00:00)         |
| 1st Sun,Jan 00:00 AM | (SELECT FORMAT = 1st Sun,Jan 00:00 AM) |

---

### 15.4.8 Setting the Daylight Saving Time Offset (SER01)

When TIME SOURCE on the REFERENCE CONFIG menu is set to GNSS, to set the Daylight Saving Time offset, follow the procedure below.

|  |
|--|
| 3 . T I M E C O D E    O F F S E T       |
| + 0 0 : 0 0 : 0 0    [ H H : M M : S S ] |

#### Procedure

---

SYSTEM CONFIG > TIME MANAGEMENT > DAYLIGHT SAVING > TIMECODE OFFSET

---

#### Parameters

±23:59:59

---

#### Initial value

+00:00:00

---

### 15.4.9 Setting the Daylight Saving Time End Date (SER01)

When TIME SOURCE on the REFERENCE CONFIG menu is set to GNSS, to set the Daylight Saving Time end date, follow the procedure below.

SELECT FORMAT = 1/1 00:00:00

|                              |
|------------------------------|
| 3 . R E T U R N    D A Y     |
| 0 1 / 0 1    0 0 : 0 0 : 0 0 |

SELECT FORMAT = 1st Sun,Jan|00:00 AM

|   |
|---|
| 3 . R E T U R N    D A Y                    |
| 1 s t    S u n ,   J a n   0 0 : 0 0    A M |

#### Procedure

---

SYSTEM CONFIG > TIME MANAGEMENT > DAYLIGHT SAVING > RETURN DAY

---

#### Parameters (SELECT FORMAT = 1/1 00:00:00)

01/01 00:00:00 - 12/31 23:59:00 (You cannot set seconds.)

---

#### Parameters (SELECT FORMAT = 1st Sun,Jan|00:00 AM)

|                     |  |
|---------------------|--|
| 1st - 5th           | Set the week                           |
| Sun - Sat           | Set the day of the week                |
| Jan - Dec           | Set the month                          |
| 00:00 AM - 11:00 PM | Set the time (You cannot set minutes.) |

---

#### Initial value

|                      |  |
|----------------------|--|
| 01/01 00:00:00       | (SELECT FORMAT = 1/1 00:00:00)         |
| 1st Sun,Jan 00:00 AM | (SELECT FORMAT = 1st Sun,Jan 00:00 AM) |

---

### 15.4.10 Setting the Leap Second (SER01)

The leap second is automatically inserted to the last time of June 30 or December 31 UTC.

When TIME SOURCE on the REFERENCE CONFIG menu is set to GNSS, to set the time by which to delay the time to insert the leap second, follow the procedure below. (You cannot set seconds.)

This function is not applied to PTP.

|                                       |
|---------------------------------------|
| 2 . S C H E D U L E D   T I M E       |
| 0 0 : 0 0 : 0 0   [ H H : M M : S S ] |

Procedure

---

SYSTEM CONFIG > TIME MANAGEMENT > LEAP SECOND

---

Parameters

---

00:00:00 - 23:59:00

---

Initial value

---

00:00:00

---

### 15.4.11 Setting L-SYNC

To set L-SYNC, follow the procedure below.

[See also] "6.6 L-SYNC"

|                             |
|-----------------------------|
| 2 . L - S Y N C   S E T U P |
| ► * D I S A B L E           |

Procedure

---

SYSTEM CONFIG > TIME MANAGEMENT > L-SYNC SETUP

---

Parameters

|          |  |
|----------|--|
| DISABLE: | The L-SYNC function is disabled.   |
| PRIMARY: | The L-SYNC function is enabled, and the instrument operates as a primary instrument.                   |
| BACKUP:  | The L-SYNC function is enabled, and the instrument operates as a backup.                               |
|          | TIME SOURCE is fixed to INTERNAL when REFERENCE SOURCE in the REFERENCE CONFIG menu is set to GENLOCK. |

---

Initial value

---

DISABLE

---

## 15.5 Setting the GNSS (SER01)

Under GNSS OPTION on the SYSTEM CONFIG menu, you can set the GNSS.

|                               |   |
|-------------------------------|---|
| 0 . S Y S T E M   C O N F I G | ↔ |
| ◆ G N S S   O P T I O N       | ↓ |

### 15.5.1 Setting the Power Supply

To select the supply voltage to apply to the GNSS antenna, follow the procedure below. Select OFF to select not to supply power.

|   |
|---|
| 2 . A N T E N N A   P O W E R   |
| <input checked="" type="checkbox"/> OFF <input type="checkbox"/> 3 . 3 V <input type="checkbox"/> 5 V |

Procedure

---

SYSTEM CONFIG > GNSS OPTION > ANTENNA POWER

---

Parameters

---

OFF / 3.3V / 5V

---

Initial value

---

OFF

---

### 15.5.2 Setting the Cable Delay

To correct the GNSS cable delay level, follow the procedure below.

|                           |
|---------------------------|
| 2 . C A B L E   D E L A Y |
| 0      [ n s e c ]        |

Procedure

---

SYSTEM CONFIG > GNSS OPTION > CABLE DELAY

---

Parameters

---

±30000 [nsec]

---

Initial value

---

0 [nsec]

---

## 15.6 Configuring the PTP Settings (SER03)

Under PTP OPTION on the SYSTEM CONFIG menu, you can specify settings related to PTP.

|                               |   |
|-------------------------------|---|
| 0 . S Y S T E M   C O N F I G | ↔ |
| ◆ P T P   O P T I O N         | ↓ |

### 15.6.1 Setting the IP Address

To set the IP address of the selected PTP, follow the procedure below.

|                                   |
|-----------------------------------|
| 3 . P T P 1   I P   A D D R E S S |
| 1 9 2 . 1 6 8 . 0 0 0 . 0 0 1     |

Procedure

---

SYSTEM CONFIG > PTP OPTION > PTP1 / PTP2 > IP ADDRESS

---

Parameters

---

000.000.000.000 - 255.255.255.255

---

Initial value

---

192.168.000.001

---

### 15.6.2 Setting the Subnet Mask

To set the subnet mask of the selected PTP, follow the procedure below.

|                                     |
|-------------------------------------|
| 3 . P T P 1   S U B N E T   M A S K |
| 2 5 5 . 2 5 5 . 2 5 5 . 0 0 0       |

Procedure

---

SYSTEM CONFIG > PTP OPTION > PTP1 / PTP2 > SUBNET MASK

---

Parameters

---

000.000.000.000 - 255.255.255.255

---

Initial value

---

255.255.255.000

---

### 15.6.3 Setting the Gateway

To set the gateway of the selected PTP, follow the procedure below.

```
3 . P T P 1   G A T E W A Y
1 9 2 . 1 6 8 . 0 0 0 . 2 5 4
```

#### Procedure

---

SYSTEM CONFIG > PTP OPTION > PTP1 / PTP2 > DEFAULT GATEWAY

---

#### Parameters

---

000.000.000.000 - 255.255.255.255

---

#### Initial value

---

192.168.000.254

---

### 15.6.4 Configuring SFP

To select the type of the SFP of the selected PTP, follow the procedure below.

Make the selection with the module connected with a cable.

Connection may not be established if the module is inserted or the cable is connected after making the selection.

```
3 . P T P 1   S F P / S F P +
◀ * S F P +
```

#### Procedure

---

SYSTEM CONFIG > PTP OPTION > PTP1 / PTP2 >SFP/SFP+

---

#### Parameters

---

SFP / SFP+

---

#### Initial value

---

SFP+

---

### 15.6.5 Setting the Reset Operation

When SFP/SFP+ is set to SFP+, to select the setting when the link to the switch is down, follow the procedure below. Normally set to OFF.

```
3 . P T P 1   L I N K   A U T O   R E S E T
▶ * O F F
```

#### Procedure

---

SYSTEM CONFIG > PTP OPTION > PTP1 / PTP2 > LINK AUTO RESET

---

#### Parameters

OFF: As before, nothing is done.

ON: Reset the Ethernet perimeter when link down is detected. Select this setting when the system does not recover from link down.

#### Initial value

---

OFF

---

### 15.6.6 Setting Port Mirroring

To select the settings for port mirroring, follow the procedure below.

|   |
|---|
| 2 . P T P   P O R T   M I R R O R I N G |
| ▶ * O F F                               |

Procedure

---

SYSTEM CONFIG > PTP OPTION > PTP PORT MIRRORING

---

Parameters

|               |  |
|---------------|--|
| OFF:          | Port mirroring is not performed.                 |
| PTP1 to PTP2: | PTP1 packets are copied and transmitted to PTP2. |
| PTP2 to PTP1: | PTP2 packets are copied and transmitted to PTP1. |

---

Initial value

---

OFF

---

## 15.7 Setting the IP (SER04)

Under IP OPTION on the SYSTEM CONFIG menu, you can specify settings related to IP.

|                               |
|-------------------------------|
| 0 . S Y S T E M   C O N F I G |
| ◀ I P   O P T I O N           |

### 15.7.1 Setting the IP Address

To set the IP address of the selected IP, follow the procedure below.

|                                 |
|---------------------------------|
| 3 . I P 1   I P   A D D R E S S |
| 1 9 2 . 1 6 8 . 0 0 0 . 0 0 1   |

Procedure

---

SYSTEM CONFIG > IP OPTION > IP1 / IP2 > IP ADDRESS

---

Parameters

---

000.000.000.000 - 255.255.255.255

---

Initial value

---

192.168.000.001

---

### 15.7.2 Setting the Subnet Mask

To set the subnet mask of the selected IP, follow the procedure below.

|                                     |
|-------------------------------------|
| 3 . I P 1    S U B N E T    M A S K |
| 2 5 5 . 2 5 5 . 2 5 5 . 0 0 0       |

Procedure

---

SYSTEM CONFIG > IP OPTION > IP1 / IP2 > SUBNET MASK

---

Parameters

---

000.000.000.000 - 255.255.255.255

---

Initial value

---

255.255.255.000

---

### 15.7.3 Setting the Gateway

To set the gateway of the selected IP, follow the procedure below.

|   |
|---|
| 3 . I P 1    D E F A U L T    G A T E W A Y |
| 1 9 2 . 1 6 8 . 0 0 0 . 2 5 4               |

Procedure

---

SYSTEM CONFIG > IP OPTION > IP1 / IP2 > DEFAULT GATEWAY

---

Parameters

---

000.000.000.000 - 255.255.255.255

---

Initial value

---

192.168.000.254

---

### 15.7.4 Configuring SFP

To select the type of the SFP transceiver used with the selected IP, follow the procedure below.

When using SFP+, select 10G, and when using SFP28, select 25G.

|                            |
|----------------------------|
| 3 . I P 1    1 0 G / 2 5 G |
| ◀ * 2 5 G                  |

Procedure

---

SYSTEM CONFIG > IP OPTION > IP1 / IP2 > 10G/25G

---

Parameters

---

10G / 25G

---

Initial value

---

25G

---

### 15.7.5 Turning RS-FEC On and Off

When 10G/25G is set to 25G, to turn the RS-FEC (Reed-Solomon Forward Error Correction) of the selected IP on and off, follow the procedure below.

```
3 . I P 1    R S - F E C
◀ * O N
```

#### Procedure

---

SYSTEM CONFIG > IP OPTION > IP1 / IP2 > RS-FEC

---

#### Parameters

---

OFF / ON

---

#### Initial value

---

ON

---

### 15.7.6 Selecting the IGMP Version

To select the IGMP (Internet Group Management Protocol) version of the selected IP, follow the procedure below.

```
3 . I P 1    I G M P
◀ * A U T O
```

#### Procedure

---

SYSTEM CONFIG > IP OPTION > IP1 / IP2 > IGMP

---

#### Parameters

---

V2 / V3 / AUTO

---

#### Initial value

---

AUTO

---

## 15.8 Setting the Alarm

Under ALARM on the SYSTEM CONFIG menu, you can set the alarm to be output from LTC/REMOTE on the rear panel. INDICATOR 1 and INDICATOR 2 correspond to alarm output 1 and alarm output 2, respectively.

[See also] "6.3.7 LTC Signal I/O and Remote Control"

### 15.8.1 Selecting the Polarity

To select the polarity of the alarm output from the selected connector, follow the procedure below.

---

#### Procedure

---

SYSTEM CONFIG > ALARM > INDICATOR 1 / INDICATOR 2 > ALARM POLARITY

---

---

#### Parameters

---

POSITIVE / NEGATIVE

---

---

#### Initial value

---

POSITIVE

---

### 15.8.2 Turning the Alarm Output On and Off

To turn on or off the alarm output from the selected connector, follow the procedure below. If any of the alarms that are enabled occurs, an alarm is output.

|                                      |   |
|--------------------------------------|---|
| 4 . U N I T P O W E R 1              |   |
| <input type="checkbox"/> E N A B L E | <input checked="" type="checkbox"/> D I S A B L E |

#### Procedure

---

SYSTEM CONFIG > ALARM > INDICATOR 1 / INDICATOR 2 > ALARM OPTION

- |                        |   |
|------------------------|---|
| > UNIT POWER1:         | When an error occurs in POWER1<br>When power supply redundancy is provided and the power is not supplied to POWER1 (SER11)  |
| > UNIT POWER2:         | When an error occurs in POWER2 (SER11)<br>When power supply redundancy is provided and the power is not supplied to POWER2 (SER11)  |
| > FAN POWER1:          | When an error occurs in the POWER1 fan  |
| > FAN POWER2:          | When an error occurs in the POWER2 fan (SER11)  |
| > FAN FRONT:           | When an error occurs in the front fan unit  |
| > FAN REAR:            | When an error occurs in the rear fan unit   |
| > INT PLL:             | When the crystal inside the instrument becomes fault  |
| > TIME LAG:            | When TIME SOURCE on the REFERENCE CONFIG menu is set to LTC (ST309), VITC (ST309), NTP, or PTP and the time acquired from TIME SOURCE differs from the internal time by more than the value set in TIMELAG SEC<br>(If TIMELAG MODE in the REFERENCE CONFIG menu is set to OFF, no alarm will be output even if this setting is set to ENABLE) |
| > REFERENCE NO SIGNAL: | When the set reference signal is not received   |
| > REFERENCE STAY:      | When an error occurs in the reference signal, and stay-in-sync is in operation.   |
| > GNSS ANTENNA:        | When ANTENNA POWER on the SYSTEM CONFIG menu is set to 3.3V or 5V and a short circuit occurs (SER01)  |
- 

#### Parameters

---

ENABLE / DISABLE

---

#### Initial value

---

DISABLE

---

## 15.9 Configuring the Log

Under LOG on the SYSTEM CONFIG menu, you can display and configure the log.

A log is an automatic recording of the status of the instrument or errors that have occurred in the instrument in chronological order.

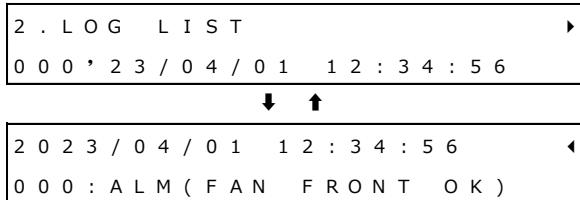

### 15.9.1 Viewing the Log

To view the log, follow the procedure below.

Press the ▲ key to view newer log entries, the ▼ key to view older log entries, and the ◀ and ▶ keys to switch between date and time display and log display.

You can view up to 1000 entries from 000 to 999. Subsequent entries that occur overwrite the oldest entries.

The date and time of the log will be the date and time selected with TIME SOURCE on the REFERENCE CONFIG menu.

#### Procedure

---

SYSTEM CONFIG > LOG > LIST

---

### 15.9.2 Copying the Log from the Instrument to a USB Memory Device

To copy the log in txt format from the instrument to a USB memory device, select OK by following the procedure below.

This setting appears when a USB memory device is connected.

#### Procedure

---

SYSTEM CONFIG > LOG > COPY INT→USB

---

#### ● USB Memory Device Structure

The log is copied to the LOG folder of the USB memory device.

The date and time of the file will be the date and time selected with TIME SOURCE on the REFERENCE CONFIG menu.

- USB memory device
  - └ ■ LT4670\_USER
    - └ ■ LOG
      - └ ■ YYYYMMDDhhmmss.txt

- **Log Example**

```

000:2023/06/23 05:13:05 ALM(UNIT POWER2)
001:2023/06/23 05:13:05 ALM(FAN POWER2)
002:2023/06/23 05:13:42 REF SRC(NO SIGNAL)
003:2023/06/23 05:14:00 REF SRC(LOCK)
004:2023/06/23 05:14:14 1PPS CAPTCHA
005:2023/06/23 05:14:16 TIME CAPTCHA
006:2023/06/23 05:17:46 REFERENCE:REFERENCE_SOURCE[GL FMT-AUTO]
007:2023/06/23 05:17:46 REF SRC(TRACKING)
008:2023/06/23 05:17:53 REF SRC(LOCK)[NTSC BB]

```

### 15.9.3 Clearing the Log

To clear the log, select OK by following the procedure below.

|                              |   |
|------------------------------|---|
| 2 . D E L E T E   L O G      |   |
| <input type="checkbox"/> O K | <input checked="" type="checkbox"/> C A N C E L |

#### Procedure

---

SYSTEM CONFIG > LOG > DELETE

---

### 15.10 Initialization

Under INITIALIZE on the SYSTEM CONFIG menu, you can initialize the settings.

|  |                          |
|--|--------------------------|
| 0 . S Y S T E M   C O N F I G                |                          |
| <input type="checkbox"/> I N I T I A L I Z E | <input type="checkbox"/> |

There are two types of initialization: CLEAR SETTING and DEFAULT SETTING. They differ in the settings that are initialized as follows. (○: initialized, ×: not initialized)

Table 15-1 | Initialization

| Setting          |   | CLEAR<br>SETTING | DEFAULT<br>SETTING |
|------------------|---|------------------|--------------------|
| REFERENCE CONFIG |   | ○                | ○                  |
| BLACK CONFIG     |   | ○                | ○                  |
| AUDIO CONFIG     |   | ○                | ○                  |
| LTC CONFIG       |   | ○                | ○                  |
| CW/1PPS CONFIG   |   | ○                | ○                  |
| SDI CONFIG       | Other than those below                              | ○                | ○                  |
|                  | User patterns saved in the instrument (INT1 - INT4) | ×                | ○                  |
|                  | ID characters saved in the instrument (INT1 - INT4) | ×                | ○                  |
|                  | Logos stored in the instrument (INT1 - INT4)        | ×                | ○                  |
| PTP CONFIG       |   | ○                | ○                  |
| IP CONFIG        |   | ○                | ○                  |
| SYSTEM CONFIG    | Other than those below                              | ×                | ○                  |
|                  | INTERNAL CLOCK ADJUST                               | ×                | ×                  |
|                  | FORMAT SETTING                                      | ×                | ×                  |

### 15.10.1 Initializing the Settings

To initialize the settings except for some settings, select OK by following the procedure below.

|                              |   |
|------------------------------|---|
| 2 . C L E A R S E T T I N G  |   |
| <input type="checkbox"/> O K | <input checked="" type="checkbox"/> C A N C E L |

#### Procedure

---

SYSTEM CONFIG > INITIALIZE > CLEAR SETTING

---

### 15.10.2 Factory Default Initialization

To initialize the settings to the factory default settings, select OK by following the procedure below.

|                                 |   |
|---------------------------------|---|
| 2 . D E F A U L T S E T T I N G |   |
| <input type="checkbox"/> O K    | <input checked="" type="checkbox"/> C A N C E L |

#### Procedure

---

SYSTEM CONFIG > INITIALIZE > DEFAULT SETTING

---

### 15.10.3 Selecting the Initial Value for the Format

To select the format that is applied when CLEAR SETTING or DEFAULT SETTING is used to initialize the instrument, follow the procedure below.

|   |                                |
|---|--------------------------------|
| 2 . F O R M A T S E T T I N G               |                                |
| <input checked="" type="checkbox"/> N T S C | <input type="checkbox"/> P A L |

#### Procedure

---

SYSTEM CONFIG > INITIALIZE > FORMAT SETTING

---

#### Parameters

---

NTSC / PAL

---

#### Initial value

---

NTSC

---

The initial value varies according to the setting made here.

Table 15-2 | Initial value

| Setting   | FORMAT SETTING |         |
|---|----------------|---------|
|   | NTSC           | PAL     |
| REFERENCE CONFIG > GENLOCK FORMAT               | NTSC BB        | PAL BB  |
| BLACK CONFIG > BLACK* > FORMAT                  | NTSC BB        | PAL BB  |
| LTC CONFIG > LTC OUTPUT > LTC* > FORMAT         | 29.97 fps      | 25 fps  |
| SDI CONFIG > SDI FREQUENCY GROUP (SER02/SER04)  | 59.94Hz        | 60/50Hz |
| SDI CONFIG > SDI* > FORMAT > RATE (SER02/SER04) | 59.94I         | 50I     |

## 15.11 Viewing and Adding Software Options

Under LICENSE INFO. on the SYSTEM CONFIG menu, you can view and add software options.

|                               |   |
|-------------------------------|---|
| 0 . S Y S T E M   C O N F I G | ↔ |
| ♦ L I C E N S E   I N F O .   | ↓ |

### 15.11.1 Viewing Software Options

To view the software options that have been added, follow the procedure below.

Only the software options that have been added are displayed.

|                               |
|-------------------------------|
| 1 . L I C E N S E   I N F O . |
| ▼ S E R 2 1 : 4 K             |

Procedure

---

SYSTEM CONFIG >LICENSE INFO.

---

### 15.11.2 Adding Software Options

To add software options, follow the procedure below.

Enter the issued license key and then press the ENTER key.

When the add operation completes, "Accepted." is displayed.

If "Failed." is displayed, retry from the entry of the license key.

|                                       |
|---------------------------------------|
| 2 . L I C E N S E   K E Y   I N P U T |
| 0 0 0 0 0 0 0 0 0 0                   |

Procedure

---

SYSTEM CONFIG >LICENSE INFO. > LICENSE KEY INPUT

---

## 15.12 Configuring USB

To select whether to enable the USB function on the front panel, follow the procedure below. If the USB memory is not recognized even though it is connected correctly, set it to DISABLE and then back to ENABLE.

|  |
|--|
| 1 . U S B    D E V I C E   |
| <input checked="" type="checkbox"/> E N A B L E <input type="checkbox"/> D I S A B L E |

Procedure

---

SYSTEM CONFIG >USB DEVICE

---

Parameters

---

ENABLE / DISABLE

---

Initial value

---

ENABLE

---

## 15.13 Turning the Fans On and Off

To turn each of the fans of the front and rear fan units, follow the procedure below.

You may turn off the fans only when performing maintenance tasks such as unit replacement; usually, use the instrument by keeping the fans on at all times.

[See also] "19.2.2 Front Fan Unit Replacement" "19.2.3 Rear Fan Unit Replacement"

|  |

ON

---

## 15.14 Copying the System Settings

Under SYSTEM COPY on the SYSTEM CONFIG menu, you can copy system settings.

This feature is useful when you want to use multiple instruments with the same settings.

The system settings include the following:

- Settings of the SYSTEM CONFIG menu
- Preset (0 - 9)
- ID character (INT1 - INT4)
- Logo (INT1 - INT4)

### 15.14.1 Copying System Settings from a USB Memory Device to the Instrument

To copy system settings from a USB memory device to the instrument, select OK by following the procedure below. (Copy system settings to the USB memory device in advance by using the COPY INT→USB menu.)

#### Procedure

---

SYSTEM CONFIG > SYSTEM COPY > COPY USB→INT

---

#### ● USB Memory Device Structure

System settings are copied from the ID folder, LOGO folder, PSET folder, and SYS folder of the USB memory device.

- USB memory device
  - └ ■ LT4670\_USER
    - ├ ■ ID
    - ├ ■ LOGO
    - ├ ■ PSET
    - └ ■ SYS

### 15.14.2 Copying System Settings from the Instrument to a USB Memory Device

To copy system settings from the instrument to a USB memory device, select OK by following the procedure below.

|  |
|--|
| 2 . S Y S   C O P Y   I N T → U S B  |
| <input checked="" type="checkbox"/> O K <input type="checkbox"/> C A N C E L |

#### Procedure

---

SYSTEM CONFIG > SYSTEM COPY > COPY INT→USB

---

#### ● **USB Memory Device Structure**

System settings are copied to the ID folder, LOGO folder, PSET folder, and SYS folder of the USB memory device.

The date and time of the file will be the date and time selected with TIME SOURCE on the REFERENCE CONFIG menu.

- USB memory device
  - └ ■ LT4670\_USER
    - ├ ■ ID
    - ├ ■ LOGO
    - ├ ■ PSET
    - └ ■ SYS

# 16 STATUS MENU

The STATUS menu shows the instrument status.

To display the STATUS menu, press the STATUS key.

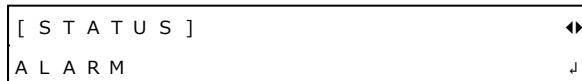

## 16.1 ALARM Menu

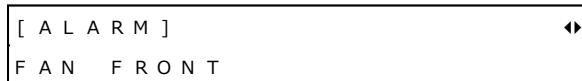

ALARM on the STATUS menu shows the details of the alarms that have occurred.

To display the ALARM menu, press STATUS several times until the following menu appears.

If no alarms have occurred, the ALARM menu itself is not displayed.

If multiple alarms have occurred, you can use the **◀** and **▶** keys to switch from the description of one alarm to that of another.

Displayable alarms are listed below.

Table 16-1 | Alarm display

| Alarm        | Alarm Condition  |
|--------------|--|
| FAN FRONT    | When an error occurs in the front fan unit   |
| FAN REAR     | When an error occurs in the rear fan unit  |
| FAN POWER1   | When an error occurs in the POWER1 fan   |
| FAN POWER2   | When an error occurs in the POWER2 fan (SER11)   |
| UNIT POWER1  | When an error occurs in POWER1<br>When power supply redundancy is provided and the power is not supplied to POWER1 (SER11)         |
| UNIT POWER2  | When an error occurs in POWER2 (SER11)<br>When power supply redundancy is provided and the power is not supplied to POWER2 (SER11) |
| INT PLL      | When the crystal inside the instrument becomes fault   |
| GNSS ANTENNA | When ANTENNA POWER on the SYSTEM CONFIG menu is set to 3.3V or 5V and a short circuit occurs (SER01)                               |

## 16.2 INFORMATION Menu

INFORMATION on the STATUS menu shows the instrument status.

To display the INFORMATION menu, press STATUS several times until the following menu appears.

Table 16-2 | INFORMATION menu

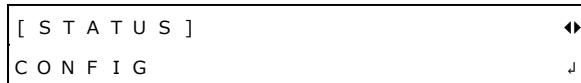

| Item  | Description  |
|---|--|
| [ R E F   S R C ] G L - F M T - ( A )<br>L O C K                                  | The reference signal type is displayed in the top row, and the lock status is displayed in the bottom row. When REFERENCE SOURCE is set to INTERNAL, "INTERNAL" is displayed in the bottom row.  |
| [ G E N L O C K   F O R M A T ]<br>N T S C   B B                                  | When REFERENCE SOURCE is set to GENLOCK FMT-AUTO, the input signal format is displayed.  |
| [ A T T E N T I O N ] G N S S<br>L E A P - S E C O N D                            | Displayed when REFERENCE SOURCE is set to GNSS and leap second information cannot be received. (SER01)   |
| [ S A T E L L I T E   U S E D ]<br>G P : 4      G L : 3      G A : 2      G B : 1 | When REFERENCE SOURCE is set to GNSS, the number of effective satellites is displayed. An example displayed when GNSS SATELLITE is set to ALL is shown on the left. The details are as below. (SER01)<br><br>GP: Number of GPS + QZSS satellites<br>GL: Number of GLONASS satellites<br>GA: Number of GALILEO satellites<br>GB: Number of BDS satellites |
| [ G P S   C / N 0 [ d B H z ] ]<br>▼ G 1 : 3 9    G 1 7 : 3 9    G 2 0 : 3 9      | When REFERENCE SOURCE is set to GNSS, C/N0 is displayed for each satellite. When the number of effective satellites is 4 or greater, you can use the ▲ and ▼ keys to switch between satellites. When the number of effective satellites is 0, "Satellite not visible." is displayed. (SER01)   |

| [ T I M E    S O U R C E ] V I T C<br>1 2 : 3 4 : 5 6        1 4 L        2 9 . 9 7 f p s D F   | When TIME SOURCE is set to LTC ST309, the date and time, superimposed line, transmission rate, whether there is a dropped frame (DF), and time zone (TZ) are displayed. |
| [ T I M E    S O U R C E ] G N S S<br>- - - - - - - - - -                                       | If the time cannot be acquired, "-----" is displayed.   |
| [ P T P    O U T P U T ] P T P 1<br>L E A D E R   | When PTP1 MODE on the PTP CONFIG menu is set to ENABLE LEADER, the output status is displayed. (SER03)  |
| [ P T P    O U T P U T ] P T P 2<br>L E A D E R   | When PTP2 MODE on the PTP CONFIG menu is set to ENABLE LEADER, the output status is displayed. (SER03)  |

## 16.3 CONFIG Menu

CONFIG on the STATUS menu shows the instrument settings.

To display the CONFIG menu, press STATUS several times until the following menu appears.

### 16.3.1 REFERENCE Menu

REFERENCE on the CONFIG menu shows settings related to the reference signal that have been specified on the REFERENCE CONFIG menu.

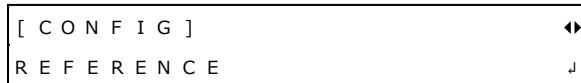

Table 16-3 | REFERENCE menu

| Item   | Description  |
|--|--|
| [ R E F E R E N C E   S O U R C E ]<br>I N T E R N A L | The reference signal selected with REFERENCE SOURCE is displayed.  |
| [ G E N L O C K   F O R M A T ]<br>N T S C   B B       | When REFERENCE SOURCE is set to GENLOCK FMT-MANUAL, the genlock format selected with GENLOCK FORMAT is displayed.                          |
| [ G E N L O C K   T I M I N G ]<br>O F N               | When REFERENCE SOURCE is set to GENLOCK, the timing set with GENLOCK TIMING FINE is displayed.   |
| [ G N S S   S A T E L L I T E ]<br>A L L               | When REFERENCE SOURCE is set to GNSS, the satellite selected with GNSS SATELLITE is displayed. (SER01)                                     |
| [ R E C O V E R Y / T R A C K I N G ]<br>F A S T       | When REFERENCE SOURCE is set to an option other than INTERNAL, the relock speed selected with AUTO SETTING or MANUAL SETTING is displayed. |
| [ T I M E   S O U R C E ]<br>I N T E R N A L           | The time source selected with TIME SOURCE is displayed.  |

### 16.3.2 BLACK Menu

BLACK on the CONFIG menu shows settings related to the black output that have been specified on the BLACK CONFIG menu.

|                 |    |
|-----------------|----|
| [ C O N F I G ] | ◀▶ |
| B L A C K       | ↓  |

Table 16-4 | BLACK menu

| Item   | Description   |
|--|---|
| [ B L A C K 1   F O R M A T ]<br>N T S C   B B                     | The BLACK1 format selected with FORMAT is displayed.<br>The same holds true for BLACK2 to BLACK6.                     |
| [ B L A C K 1   T I M I N G ]<br>O F            O L            O D | The BLACK1 timing set with FRAME, VERTICAL, and HORIZONTAL is displayed.<br>The same holds true for BLACK2 to BLACK6. |

### 16.3.3 GNSS Menu (SER01)

GNSS on the CONFIG menu shows settings related to the GNSS option.

|                         |    |
|-------------------------|----|
| [ C O N F I G ]         | ◀▶ |

## 16.4 LOG Menu

LOG on the STATUS menu is used to display and clear the log.

To display the LOG menu, press STATUS several times until the following menu appears.

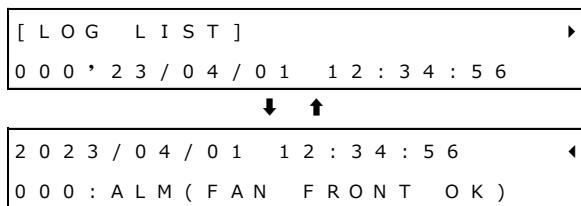

### 16.4.1 Viewing the Log

To view the log, follow the procedure below.

Press the ▲ key to view newer log entries, the ▼ key to view older log entries, and the ◀ and ▶ keys to switch between date and time display and log display.

You can view up to 1000 entries from 000 to 999. Subsequent entries that occur overwrite the oldest entries.

The date and time of the log will be the date and time selected with TIME SOURCE on the REFERENCE CONFIG menu.

Procedure

---

STATUS > LOG > LIST

---

### 16.4.2 Clearing the Log

To clear the log, select OK by following the procedure below.

Procedure

---

STATUS > LOG > DELETE

---

# 17 SNMP

By using SNMP (Simple Network Management Protocol), you can control the instrument from SNMP managers. In addition, when the fan stops or other errors occur, traps can be sent from the instrument to SNMP managers.

- \* The Ethernet features of this instrument have only been confirmed to work in a local network environment. LEADER does not guarantee that the features will work in all network environments.
- \* DHCP client and DNS resolver features are not supported.
- \* This instrument does not come with an SNMP manager. Prepare one by yourself. For details of how to use an SNMP manager, see the instruction manual for the SNMP manager.

## 17.1 SNMP Versions

SNMPv2c  
SNMPv3

## 17.2 SMI Definitions

```
IMPORTS
MODULE-IDENTITY, OBJECT-TYPE, NOTIFICATION-TYPE, IpAddress, Counter32, enterprises
    FROM SNMPv2-SMI
DisplayString, MacAddress
    FROM SNMPv2-TC
OBJECT-GROUP, MODULE-COMPLIANCE
    FROM SNMPv2-CONF;
```

## 17.3 How to Use

The following describes how to use SNMPv2c as an example.

### 1. On the LT4670, set the IP address.

To set the IP address, choose "SYSTEM CONFIG > NETWORK > ETHERNET > IP ADDRESS".

|                               |
|-------------------------------|
| 3 . I P   A D D R E S S       |
| 1 9 2 . 1 6 8 . 0 0 0 . 0 0 1 |

### 2. On the LT4670, enable the network settings.

You need to enable "NETWORK SETUP" and "SNMP SETUP" individually.

Choose "SYSTEM CONFIG > NETWORK > NETWORK SETUP", and set "ENABLE" for "NETWORK SETUP".

|  |
|--|
| 2 . N E T W O R K   S E T U P  |
| <input checked="" type="checkbox"/> E N A B L E <input type="checkbox"/> D I S A B L E |

Choose "SYSTEM CONFIG > NETWORK > SNMP > SNMP SETUP", and set "V2C" for "SNMP SETUP".

|   |
|---|
| 3 . S N M P    S E T U P  |
| <input type="checkbox"/> D I S A B L E <input checked="" type="checkbox"/> V 2 C <input type="checkbox"/> V 3 |

### 3. Enable the trap transmission destinations to use with the LT4670.

Choose "SYSTEM CONFIG > NETWORK > SNMP > SNMP TRAP 1 - SNMP TRAP 4", and set "ENABLE".

You can use up to four trap transmission destinations. To alleviate communication load, disable the transmission destinations that you are not using.

|  |
|--|
| 3 . S N M P    T R A P    1  |
| <input checked="" type="checkbox"/> E N A B L E <input type="checkbox"/> D I S A B L E |

### 4. Set the IP addresses of the trap transmission destinations to use with the LT4670.

Choose "SYSTEM CONFIG > NETWORK > SNMP > SNMP MANAGER IP 1 - SNMP MANAGER IP 4", and set the IP address.

|  |
|--|
| 3 . S N M P    M A N A G E R    I P    1 |
| 0 0 0 . 0 0 0 . 0 0 0 . 0 0 0            |

### 5. Connect ETHERNET/CONTROL on the LT4670 rear panel to the network device.

Connect to a network where an SNMP manager is available.

### 6. Start the SNMP manager on the PC.

The initial values for community names are as listed below.

You can change them, using "SYSTEM CONFIG > NETWORK > SNMP > SNMP COMMUNITY".

READ COMMUNITY: LDRUser

WRITE COMMUNITY: LDRAdm

TRAP COMMUNITY: LDRUser

### 7. Restart the LT4670.

### 8. When the instrument restarts, check that the standard trap "ColdStart" is received by the SNMP manager.

For SNMPv3, use the following parameters:

Table 17-1 | SNMPv3

|                        |                         |                            |
|------------------------|-------------------------|----------------------------|
| User setting           | READ COMMUNITY          | LDUser (not to be changed) |
| Authentication setting | WRITE COMMUNITY         | LDAdm (not to be changed)  |
|                        | TRAP COMMUNITY          | LDUser (not to be changed) |
| Encryption setting     | Authentication password | leader23                   |
|                        | Authentication method   | SHA                        |
| Encryption setting     | Encryption password     | LT4670xt                   |
|                        | Encryption method       | AES                        |

## 17.4 Enterprise MIB

The enterprise MIBs available when all options (SER01, SER02, SER03, SER04, SER11, and SER21) are added are listed below.

### **Retrieving the MIB file**

Download it from the Web browser or copy it from the LT4670.

To download it from the Web browser, click the GET MIB button on the SYSTEM screen.

[See also] "18.4.9 SYSTEM Screen"

To copy it from the LT4670, connect a USB memory device to the LT4670, choose "SYSTEM CONFIG > NETWORK > SNMP > COPY MIB INT→USB", and set "OK". "lt4670.my" will be copied to "USB memory device > LT4670\_USER > MIB".

|  |
|--|
| 3 . C O P Y    M I B    I N T → U S B                                    |
| <input checked="" type="button"/> O K <input type="button"/> C A N C E L |

### **Enterprise number**

Leader's enterprise number is 20111.

iso(1).org(3).dod(6).internet(1).private(4).enterprises(1).leader(20111)

### **MIB structure**

leader(20111).lt4670(44).lt4670ST1(1).l44statusTBL(2).l44statusReferenceTBL(2).X

Syntax: Integer

Description: Alarm status and reference signal status

# 18 WEB BROWSER

You can control this instrument from a general-purpose Web Browser on a PC.

\* The Ethernet features of this instrument have only been confirmed to work in a local network environment. LEADER does not guarantee that the features will work in all network environments.

## 18.1 Operating Environment

This function has been confirmed to work with the following Web browsers.

- Google Chrome Ver. 118
- Microsoft Edge Ver. 118

## 18.2 How to Use

### 1. On the LT4670, set the IP address.

To set the IP address, choose "SYSTEM CONFIG > NETWORK > ETHERNET > IP ADDRESS".

|                               |
|-------------------------------|
| 3 . I P     A D D R E S S     |
| 1 9 2 . 1 6 8 . 0 0 0 . 0 0 1 |

### 2. On the LT4670, enable the network settings.

You need to enable "NETWORK SETUP", "HTTP SETUP", and "WEB BROWSER" individually.

Choose "SYSTEM CONFIG > NETWORK > NETWORK SETUP", and set "ENABLE" for "NETWORK SETUP".

|  |
|--|
| 2 . N E T W O R K     S E T U P  |
| <input checked="" type="checkbox"/> E N A B L E <input type="checkbox"/> D I S A B L E |

Choose "SYSTEM CONFIG > NETWORK > HTTP > HTTP SETUP", and set "ENABLE" for "HTTP SETUP".

|  |
|--|
| 3 . H T T P     S E T U P  |
| <input type="checkbox"/> D I S A B L E <input checked="" type="checkbox"/> E N A B L E |

Choose "SYSTEM CONFIG > NETWORK > HTTP > WEB BROWSER", and set "ENABLE" for "WEB BROWSER".

|  |
|--|
| 3 . W E B     B R O W S E R  |
| <input checked="" type="checkbox"/> E N A B L E <input type="checkbox"/> D I S A B L E |

### 3. Connect ETHERNET/CONTROL on the LT4670 rear panel to the network device.

### 4. Start the Web Browser on your PC.

## 5. Enter the URL in the address box of the Web Browser.

Enter "http://" and the IP address that you set in step 1.

When Web Authentication is enabled, enter the Username and Password after entering the URL. We recommend that you change the password from the factory setting.

[See also] "15.3.14 Configuring the Web Authentication"

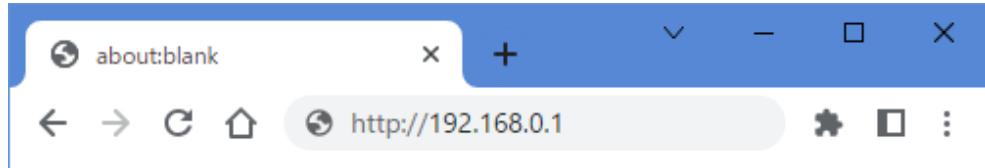

Figure 18-1 | URL

If you enter the correct URL, the STATUS screen of the LT4670 appears.

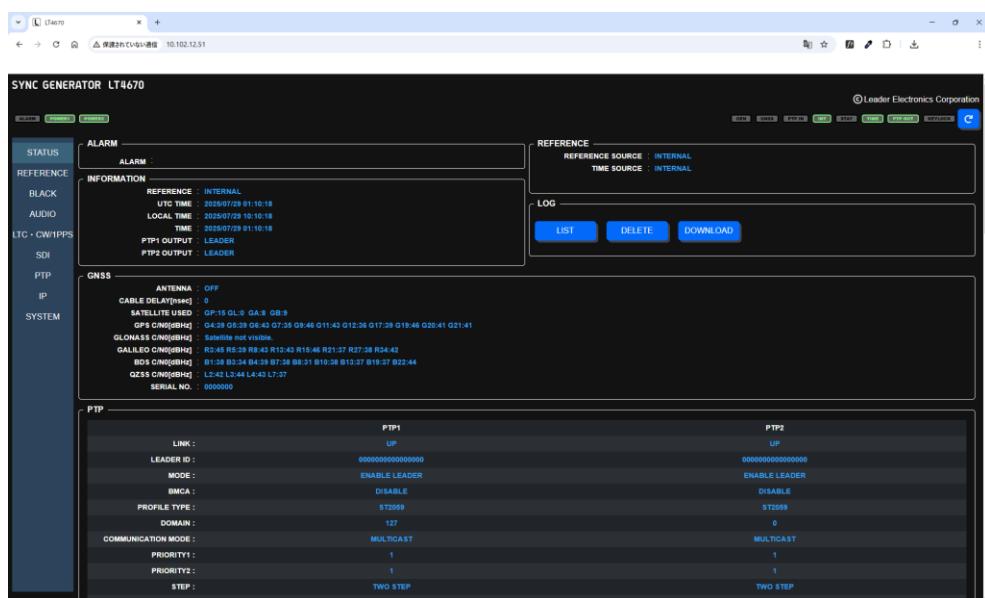

Figure 18-2 | STATUS screen

## 6. Control this instrument from the Web browser.

From the menu on the left, select an item and set values. Do not operate any key on the main unit while you control this instrument from the Web browser.

## 18.3 Procedure

### Indicators and reload

The indicators at the top of the screen represent the LEDs on the LT4670 front panel. They light and blink as do the LEDs.

Clicking the reload button in the upper right of the screen reloads the screen, displaying the STATUS screen again.

Figure 18-3 | Indicators and reload

### Selecting a menu

You can switch the setting items by selecting a menu on the left of the screen.

STATUS displays the STATUS menu of the LT4670. REFERENCE to SYSTEM mainly display the contents of the CONFIG menu of the LT4670. STATUS is for viewing the values only; it cannot be used to set the items.

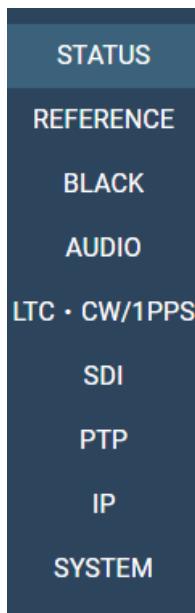

Figure 18-4 | Selecting a menu

## Expanding the setting items

Some items of the setup screen have a hierarchical structure.

Immediately after you select a menu, all the items appear with their hierarchy shrunk. You can expand an item by clicking the "V" mark next to the title.

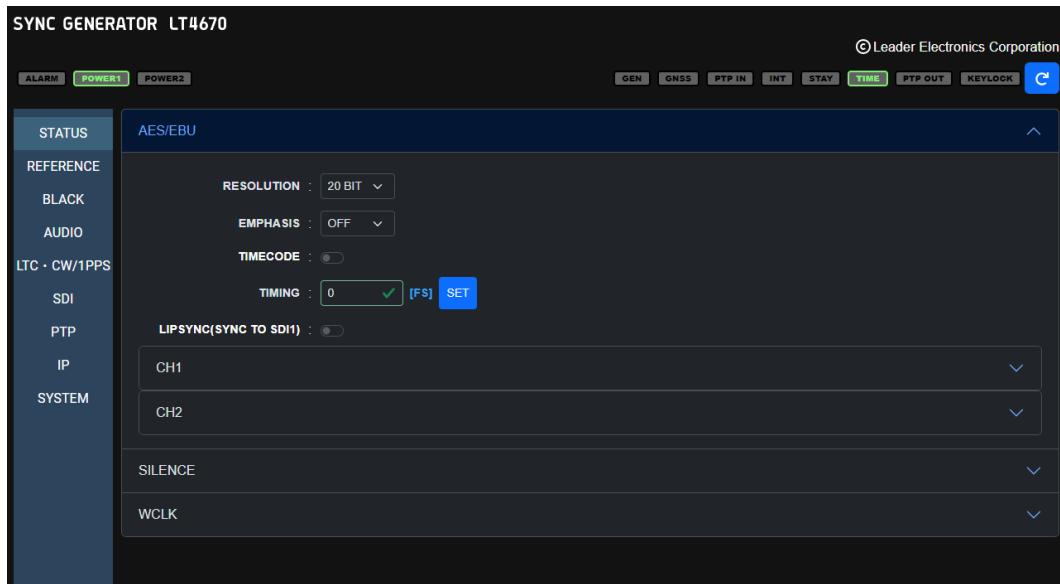

Figure 18-5 | Expanding the setting items

## Selecting items

To select an item, click the selection box to select it.

Some selecting items have the SET button, and some don't.

If you change the value of an item that has the SET button, the changed value is applied when you click the SET button.

If the item does not have the SET button, the changed value is applied immediately.

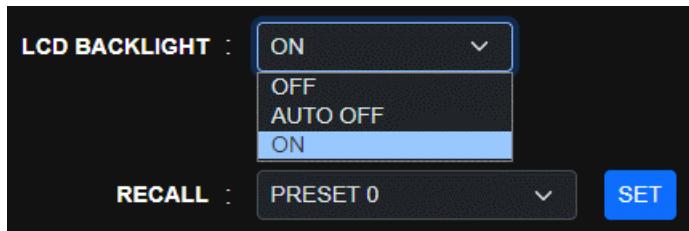

Figure 18-6 | Selecting items

### Entering values

To enter a value, use the ▲ and ▼ buttons or enter a value directly.

The changed value is applied when you click the SET button.

When the value is within the specified range, a green check mark appears. If the value is outside the range, a red warning mark appears. If the red warning mark appears, the value is not applied. Enter a valid value.

Figure 18-7 | Entering values

## 18.4 Screen Description

This section describes the screens that appear when all options (SER01, SER02, SER03, SER04, SER11, and SER21) are added.

### 18.4.1 STATUS Screen

The STATUS screen displays the LT4670 status.

The STATUS screen of the SYNC GENERATOR LT4670 is displayed. The left sidebar shows navigation categories: STATUS, REFERENCE, LTC • CW/1PPS, SDI, PTP, IP, and SYSTEM. The main content area is divided into several sections:

- ALARM:** Shows the current alarm status as "LOCK".
- INFORMATION:** Displays reference information including Reference (LOCK), UTC Time (2025/07/29 01:47:21), Local Time (2025/07/29 10:47:21), Time (2025/07/29 01:47:21), Ref Phase Lag (NO LAG), NTP Difference (+00:00:00.7100), PTP1 Output (LEADER), and PTP2 Output (LEADER).
- REFERENCE:** Settings for Reference Source (GENLOCK FMT-MANUAL), Genlock Format (NTSC BB), Timing Fine (0), Recovery Mode (AUTO), Auto Setting (FAST), Time Source (NTP), and Sync Detect (GENERAL).
- LOG:** Buttons for LIST, DELETE, and DOWNLOAD.
- GNSS:** Satellite tracking details for GPS, GLONASS, GALILEO, BDS, and QZSS.
- PTP:** Peer-to-Peer settings for PTP1 and PTP2, including Link (UP), Leader ID, Mode, BMCA, Profile Type, Domain, Communication Mode, Priority 1, Priority 2, Step, Clock Class, Clock Accuracy, Clock Source, ST2059 Local Offset, ST2059 Jump Seconds, ST2059 Next Jump, ST2059 Next Jam Time, ST2059 Previous Jam Time, and Serial No.
- BLACK:** Configuration for six black generator outputs (BLACK1 to BLACK6), including Format (1125/6984), Timing (L:0, D:0), Output (ENABLE), and Link to PTP1/BMCA (DISABLE).

## 18 WEB BROWSER

Figure 18-8 | STATUS screen

Table 18-1 | Description of the STATUS screen

| Item        |                | Description   |
|-------------|----------------|---|
| ALARM       | ALARM          | The details of the alarm that currently exists are displayed in red.            |
| INFORMATION | REFERENCE      | The lock status is displayed. When not locked, the item is displayed in orange. |
|             | GENLOCK FORMAT | The input signal format is displayed.   |
|             | UTC TIME       | The Coordinated Universal Time loaded from TIME SOURCE is displayed.            |
|             | LOCAL TIME     | The internal clock of the instrument is displayed.                              |

| Item      |                    | Description  |
|-----------|--------------------|--|
|           | TIME               | The date and time selected with TIME SOURCE on the REFERENCE CONFIG menu is displayed.               |
|           | REF PHASE LAG      | The phase difference from the reference signal is displayed.   |
|           | NTP DIFFERENCE     | The time difference from the NTP server is displayed.  |
|           | GNSS               | The input status of the GNSS signal and attention information is displayed.                          |
|           | PTP* OUTPUT        | The output status of the PTP is displayed.   |
| REFERENCE | REFERENCE SOURCE   | The reference signal is displayed.   |
|           | GENLOCK FORMAT     | The genlock format is displayed.   |
|           | TIMING FINE        | The output signal timing relative to the reference signal is displayed.                              |
|           | GNSS SATELLITE     | The satellite type is displayed.   |
|           | RECOVERY MODE      | The recovery mode is displayed.  |
|           | AUTO SETTING       | The relock speed when the recovery mode is AUTO is displayed.  |
|           | MANUAL SETTING     | The relock speed when the recovery mode is MANUAL is displayed.                                      |
|           | TIME SOURCE        | The time source is displayed.  |
|           | SYNC DETECT        | The noise tolerance setting is displayed.  |
| LOG       | LIST               | The log is displayed in a pop-up.  |
|           | DELETE             | Delete the log.  |
|           | DOWNLOAD           | Download the log in txt format.  |
| GNSS      | ANTENNA            | The voltage of the power supplied to the GNSS antenna is displayed.                                  |
|           | CABLE DELAY        | The delay correction value of the GNSS cable is displayed.   |
|           | SATELLITE USED     | The number of effective satellites is displayed.   |
|           | GPS C/N0           | C/N0 of GPS is displayed.  |
|           | GLONASS C/N0       | C/N0 of GLONASS is displayed.  |
|           | GALILEO C/N0       | C/N0 of GALILEO is displayed.  |
|           | BDS C/N0           | C/N0 of BDS is displayed.  |
|           | QZSS C/N0          | C/N0 of QZSS is displayed.   |
|           | SERIAL NO.         | The serial number of the GNSS option is displayed.   |
| PTP       | LINK               | The link status is displayed.  |
|           | LEADER ID          | The ID of the leader locked when the instrument is a follower is displayed.                          |
|           | MODE               | Displays the mode  |
|           | BMCA               | The BMCA setting is displayed when the instrument is a leader.                                       |
|           | PROFILE TYPE       | The profile is displayed.  |
|           | DOMAIN             | The domain number is displayed.  |
|           | COMMUNICATION MODE | The communication mode is displayed.   |
|           | PRIORITY*          | The priority is displayed when the instrument is a leader.   |
|           | STEP               | The step is displayed.   |
|           | CLOCK CLASS        | The value of the clock class defined in IEEE1588 is displayed.                                       |
|           | CLOCK ACCURACY     | The clock accuracy is displayed.   |
|           | CLOCK SOURCE       | The time source used is displayed.   |
|           | PHASE LAG          | The phase difference between the leader and follower is displayed when the instrument is a follower. |
|           | LOCK VALUE         | The lock strength of the leader and follower is displayed when the                                   |

| Item                     | Description  |  |
|--------------------------|--|--|
|                          | instrument is a follower.  |  |
| PACKET NOISE             | The average value of the PTP noise is displayed when the instrument is a follower. |  |
| ST2059 LOCAL OFFSET      | The offset time for TAI is displayed.  |  |
| ST2059 JUMP SECONDS      | The offset time during the daylight saving time is displayed.                      |  |
| ST2059 NEXT JUMP         | The start or end date and time of the daylight saving time is displayed.           |  |
| ST2059 NEXT JAM TIME     | The date and time on which jam sync will occur next is displayed.                  |  |
| ST2059 PREVIOUS JAM TIME | The date and time on which jam sync occurred is displayed.                         |  |
| SERIAL NO.               | The serial number of the PTP option is displayed.                                  |  |
|                          |  |  |
| BLACK                    | FORMAT   | The black format and EQUAL TO BLACK1 information is displayed.               |
|                          | TIMING   | The black output timing relative to the reference signal is displayed.       |
|                          | OUTPUT   | Whether the black output is enabled or disabled is displayed.                |
|                          | LINK TO PTP* BMCA  | Whether to stop the black output in linkage with BMCA is displayed.          |
| LTC                      | ON/OFF   | The LTC output on/off state and EQUAL TO LTC1 information is displayed.      |
|                          | FORMAT   | The LTC format is displayed.   |
|                          | OFFSET   | The offset of the LTC output relative to the reference signal is displayed.  |
|                          | DROP FRAME   | The dropped frame on/off state is displayed.                                 |
| SYSTEM                   | SERIAL NO.   | The serial number of LT4670 is displayed.                                    |
|                          | FIRMWARE VERSION   | The firmware version is displayed.   |
|                          | OPTION   | The added software option is displayed.                                      |
| CW/1PPS                  | OUTPUT   | The signal output from the CW/1PPS connector on the rear panel is displayed. |
| SDI                      | FORMAT   | The SDI format and EQUAL TO SDI* information is displayed.                   |
|                          | TIMING   | The SDI output timing relative to the reference signal is displayed.         |
|                          | PATTERN  | The pattern is displayed.  |
|                          | OUTPUT   | Whether the SDI output is enabled or disabled is displayed.                  |
|                          | LINK TO PTP* BMCA  | Whether to stop SDI output in linkage with BMCA is displayed.                |
|                          | SERIAL NO.   | The serial number of the SDI option is displayed.                            |
|                          | FW   | The FPGA version is displayed.   |
| IP                       | TYPE   | The IP output standard is displayed.   |
|                          | OUTPUT   | The IP output is displayed.  |
|                          | VIDEO  | The video output is displayed.   |
|                          | VIDEO PAYLOAD  | The payload type of the video is displayed.                                  |
|                          | VIDEO VLAN   | The VLAN setting of the video is displayed.                                  |
|                          | VIDEO VLAN TAG   | The VLAN tag of the video is displayed.                                      |
|                          | VIDEO DSCP   | The DSCP setting of the video is displayed.                                  |
|                          | VIDEO DSCP TAG   | The DSCP tag of the video is displayed.                                      |
|                          | VIDEO DESTINATION IP   | The destination IP address of the video is displayed.                        |
|                          | VIDEO DESTINATION PORT   | The destination port number of the video is displayed.                       |
|                          | AUDIO  | The audio output is displayed.   |
|                          | AUDIO PAYLOAD  | The payload type of the audio is displayed.                                  |

| Item                   | Description   |
|------------------------|---|
| AUDIO VLAN             | The VLAN setting of the audio is displayed.   |
| AUDIO VLAN TAG         | The VLAN tag of the audio is displayed.   |
| AUDIO DSCP             | The DSCP setting of the audio is displayed.   |
| AUDIO DSCP TAG         | The DSCP tag of the audio is displayed.   |
| AUDIO MODE             | The audio output standard is displayed.   |
| AUDIO PACKET TIME      | The packet time of the audio is displayed.  |
| AUDIO DESTINATION IP   | The destination IP address of the audio is displayed.                                       |
| AUDIO DESTINATION PORT | The destination port number of the audio is displayed.                                      |
| ANC                    | The ANC output is displayed.  |
| ANC PAYLOAD            | The payload type of the ANC is displayed.   |
| ANC VLAN               | The VLAN setting of the ANC is displayed.   |
| ANC VLAN TAG           | The VLAN tag of the ANC is displayed.   |
| ANC DSCP               | The DSCP setting of the ANC is displayed.   |
| ANC DSCP TAG           | The DSCP tag of the ANC is displayed.   |
| ANC DESTINATION IP     | The destination IP address of the ANC is displayed.   |
| ANC DESTINATION PORT   | The destination port number of the ANC is displayed.  |
| MAC ADDRESS            | The MAC address of the IP option is displayed.  |
| SERIAL NO.             | The serial number of the IP option is displayed.  |
| FW                     | The FPGA version is displayed.  |
| NMOS SETUP             | Whether to control with NMOS is displayed.  |
| NODE LABEL             | The NMOS node label is displayed.   |
| DEVICE LABEL           | The NMOS device label is displayed.   |
| NODE PORT              | The IS-04 port number is displayed.   |
| IS04 NODE API          | The Node API version of the IS-04 is displayed.   |
| IS04 DNS-SD            | The DNS-SD communication mode of the IS-04 is displayed.                                    |
| IS04 DNS-SD IP         | The DNS-SD IP address of the IS-04 is displayed.  |
| IS04 DNS-SD PORT       | The DNS-SD port number of the IS-04 is displayed.   |
| IS04 DOMAIN            | The IS-04 domain name is displayed.   |
| IS04 SERIAL LABEL      | The setting for adding the serial number to the resource information of IS-04 is displayed. |

### 18.4.2 REFERENCE Screen

The REFERENCE screen lets you set the items of the REFERENCE CONFIG menu of LT4670.

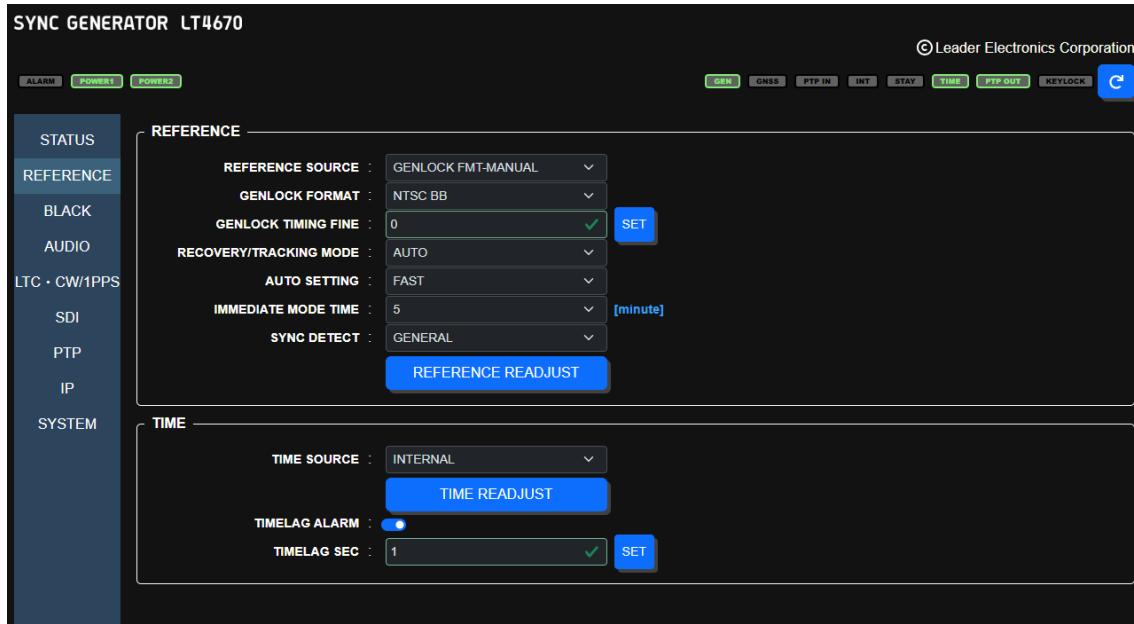

Figure 18-9 | REFERENCE screen

Table 18-2 | Description of the REFERENCE screen

| Item                   | Description  | Initial Value               |
|------------------------|--|-----------------------------|
| REFERENCE SOURCE       | Select the reference signal.   | INTERNAL                    |
| GENLOCK FORMAT         | Select the genlock format.   | NTSC BB (NTSC)<br>PAL (PAL) |
| GENLOCK TIMING FINE    | Set the output signal timing relative to the reference signal.             | 0                           |
| GNSS SATELLITE         | Select the satellite type.   | ALL                         |
| RECOVERY/TRACKING MODE | Select the recovery mode.  | AUTO                        |
| AUTO SETTING           | Select the relock speed when the recovery mode is AUTO.                    | FAST                        |
| MANUAL SETTING         | Select the relock speed when the recovery mode is MANUAL.                  | IMMEDIATE                   |
| IMMEDIATE MODE TIME    | Set the time for which the instrument operates with IMMEDIATE at power-on. | OFF                         |
| SYNC DETECT            | Select the noise immunity.   | GENERAL                     |
| REFERENCE READJUST     | Relock manually to the reference signal.                                   | -                           |
| TIME SOURCE            | Select the time source.  | INTERNAL                    |
| TIME READJUST          | Load the time manually.  | -                           |
| TIMELAG ALARM          | Turn the time lag alarm on or off.   | ON                          |
| TIMELAG SEC            | Set the time that is considered as a time lag alarm.                       | 1                           |

### 18.4.3 BLACK Screen

The BLACK screen lets you set the items of the BLACK CONFIG menu of LT4670.

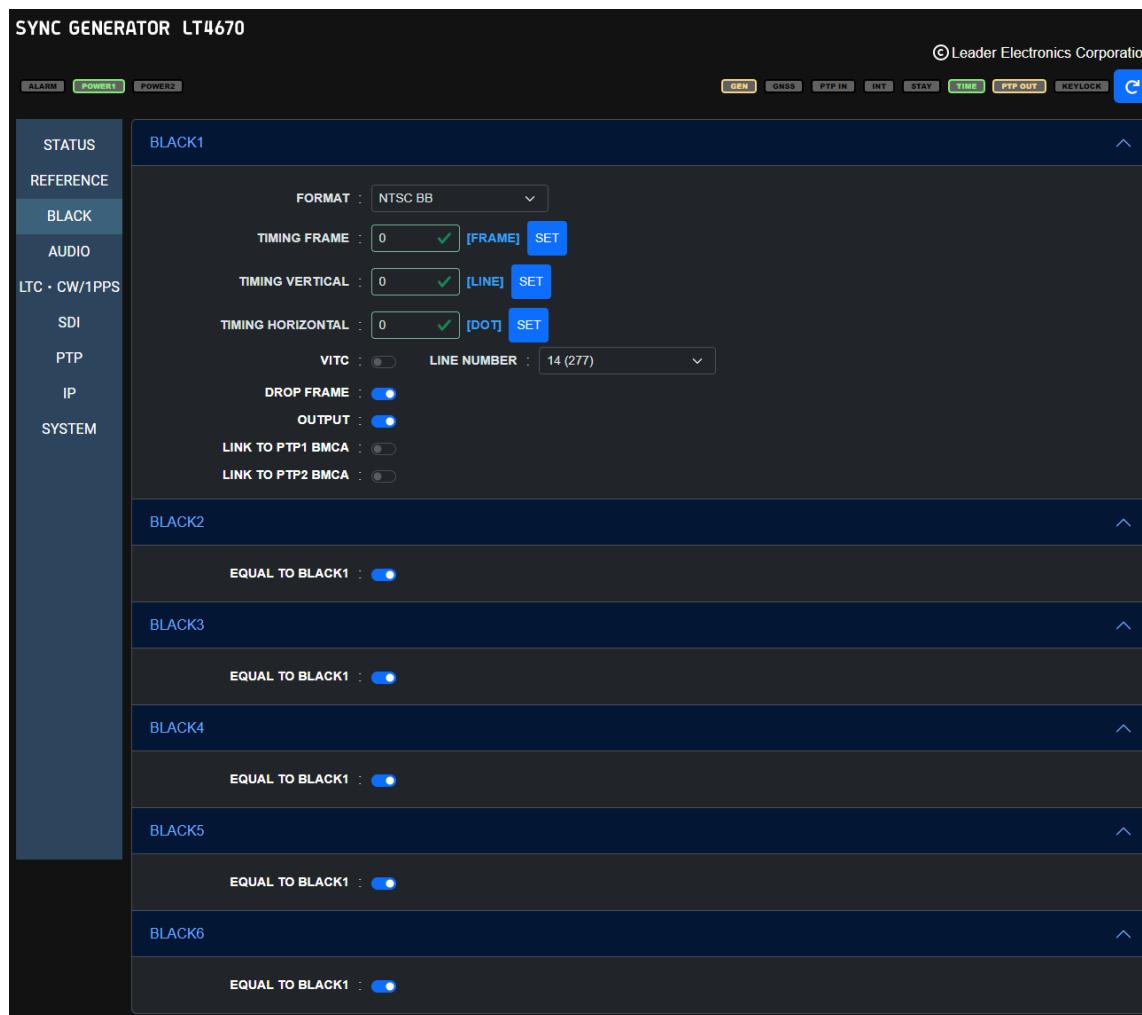

Figure 18-10 | BLACK screen

Table 18-3 | Description of BLACK screen

| Item                | Description   | Initial Value                  |
|---------------------|---|--------------------------------|
| FORMAT              | Select the black format.  | NTSC BB (NTSC)<br>PAL BB (PAL) |
| TIMING FRAME        | Set the black output timing relative to the reference signal in frames. | 0                              |
| TIMING VERTICAL     | Set the black output timing relative to the reference signal in lines.  | 0                              |
| TIMING HORIZONTAL   | Set the black output timing relative to the reference signal in dots.   | 0                              |
| VITC                | Turn time code insertion on or off.                                     | OFF                            |
| LINE NUMBER         | Set the time code superimposition line.                                 | 14 (NTSC)<br>19 (PAL)          |
| DROP FRAME          | Turn the dropped frame on or off.                                       | ON                             |
| OUTPUT              | Turn the black output on or off.  | ON                             |
| LINKED TO PTP* BMCA | Select whether to stop the black output in linkage with BMCA.           | OFF                            |
| EQUAL TO BLACK1     | Select whether to make the settings the same as those for BLACK1.       | OFF                            |

#### 18.4.4 AUDIO Screen

The AUDIO screen lets you set the items of the AUDIO CONFIG menu of LT4670.

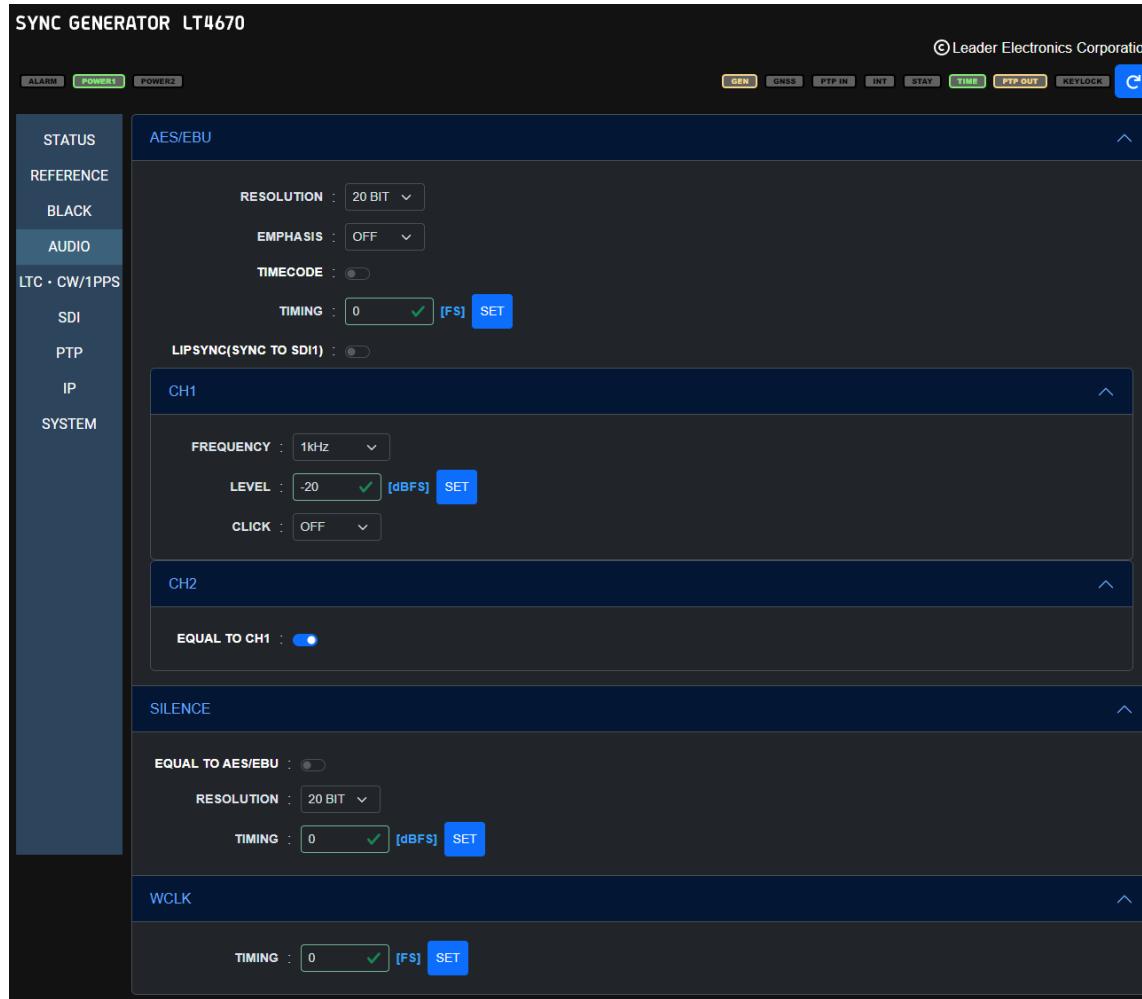

Figure 18-11 | AUDIO screen

Table 18-4 | Description of AUDIO screen

|         | Item                  | Description  | Initial Value |
|---------|-----------------------|--|---------------|
| AES/EBU | RESOLUTION            | Select the resolution.   | 20 BIT        |
|         | EMPHASIS              | Select the pre-emphasis mode.                                      | OFF           |
|         | TIMECODE              | Turn time code insertion on or off.                                | OFF           |
|         | TIMING                | Set the AES/EBU output timing relative to the reference signal.    | 0             |
|         | LIPSYNC(SYNC TO SDI1) | Select whether to link with lip sync.                              | OFF           |
|         | FREQUENCY             | Select the frequency.  | 1kHz          |
|         | LEVEL                 | Set the level.   | -20           |
|         | CLICK                 | Select the click insertion interval.                               | OFF           |
|         | EQUAL TO CH1          | Select whether to make the settings the same as those for CH1.     | OFF           |
| SILENCE | EQUAL TO AES/EBU      | Select whether to make the settings the same as those for AES/EBU. | OFF           |
|         | RESOLUTION            | Select the resolution.   | 20 BIT        |
|         | TIMING                | Set the silence output timing relative to the reference signal.    | 0             |
| WCLK    | TIMING                | Set the word-clock output timing relative to the reference signal. | 0             |

### 18.4.5 LTC & CW/1PPS Screen

The LTC & CW/1PPS screen lets you set the items of the LTC CONFIG menu and CW/1PPS CONFIG menu of LT4670.

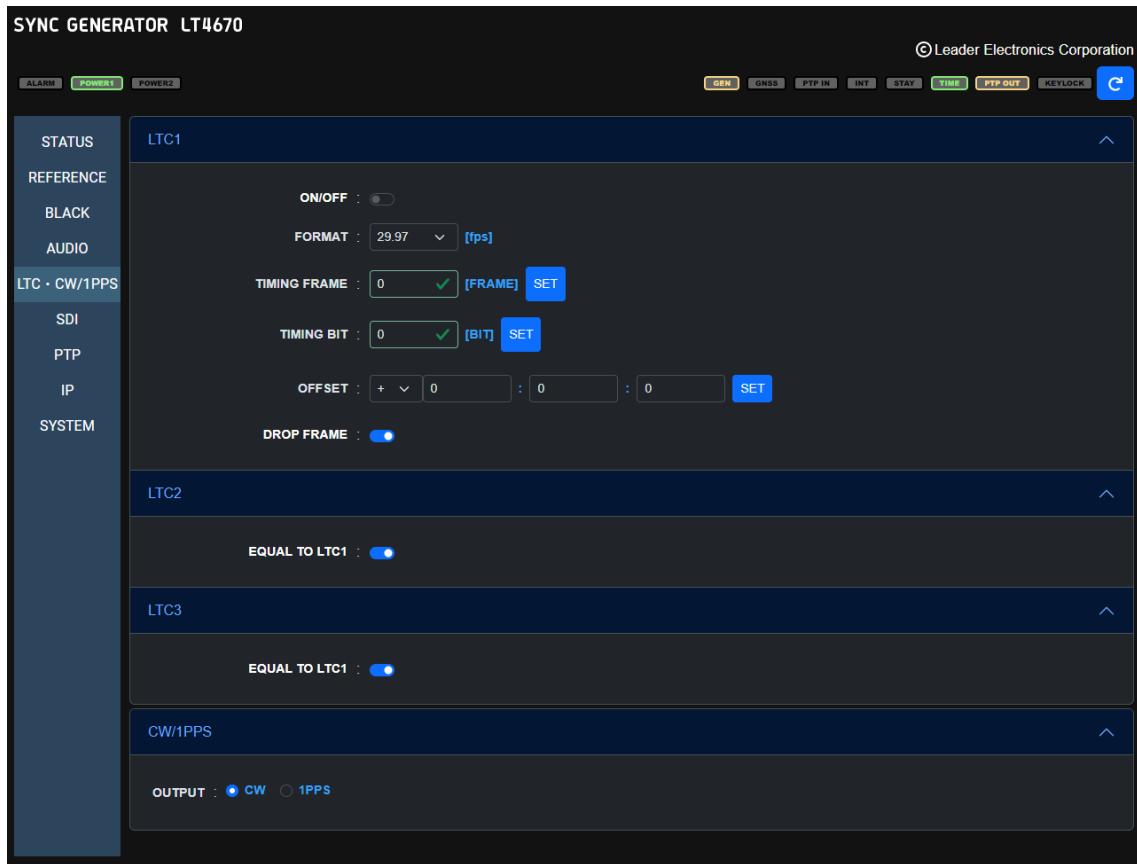

Figure 18-12 | LTC & CW/1PPS screen

Table 18-5 | Description of the LTC & CW/1PPS screen

| Item          | Description  | Initial Value            |
|---------------|--|--------------------------|
| ON/OFF        | Turn the LTC output on or off.   | OFF                      |
| FORMAT        | Select the LTC format.   | 29.97 (NTSC)<br>25 (PAL) |
| TIMING FRAME  | Set the LTC output timing relative to the reference signal in frames.  | 0                        |
| TIMING BIT    | Set the LTC output timing relative to the reference signal in bits.    | 0                        |
| OFFSET        | Set the offset of the LTC output relative to the reference signal.     | +00:00:00                |
| DROP FRAME    | Turn the dropped frame on or off.                                      | ON                       |
| EQUAL TO LTC1 | Select whether to make the settings the same as those for LTC1.        | OFF                      |
| OUTPUT        | Select the signal output from the CW/1PPS connector on the rear panel. | CW                       |

### 18.4.6 SDI Screen (SER02/SER04)

The SDI screen lets you set the items of the SDI CONFIG menu of LT4670.

| Item           |                       | Description  | Initial Value              |
|----------------|-----------------------|--|----------------------------|
| FORMAT         | SYSTEM                | Select the SDI format.   | 1920x1080 HD               |
|                | STRUCTURE             | Select the color system and quantization accuracy.                   | YCbCr(422)10bit            |
|                | FRAME RATE            | Select the frame (field) frequency.                                  | 59.94I (NTSC)<br>50I (PAL) |
| TIMING         | 0H TIMING             | Select the reference timing for the SDI output and black output.     | SERIAL                     |
|                | TIMING VERTICAL       | Set the SDI output timing relative to the reference signal in lines. | 0                          |
|                | TIMING HORIZONTAL     | Set the SDI output timing relative to the reference signal in dots.  | 0                          |
| PATTERN        | PATTERN SELECT        | Select the pattern type.   | FIX                        |
|                | PATTERN               | Select the pattern.  | COLOR BAR<br>100%          |
|                | TRANSFER              | Transfer user patterns.  | -                          |
|                | COLORIMETRY           | The user pattern colorimetry is displayed.                           | -                          |
|                | RANGE                 | The user pattern range is displayed.                                 | -                          |
|                | HDR/SDR               | The user pattern HDR standard is displayed.                          | -                          |
|                | PATTERN POWER ON LOAD | Select whether to transfer user patterns at startup.                 | OFF                        |
| VIDEO          | COMPONENT             | Turn the output signal on or off for each component.                 | All ON                     |
| SAFETY AREA    | SAFETY AREA           | Turn the safety area marker on or off.                               | All OFF                    |
| PATTERN SCROLL | ON/OFF                | Turn the scroll on or off.   | OFF                        |
|                | V-SPEED               | Set the vertical scroll speed and direction.                         | 0                          |
|                | H-SPEED               | Set the horizontal scroll speed and direction.                       | 0                          |
| PATTERN CHANGE | ON/OFF                | Turn pattern change on or off.                                       | OFF                        |
|                | SPEED                 | Set the pattern change interval.                                     | 1                          |
| ID CHARACTER   | ON/OFF                | Turn ID characters on or off.  | OFF                        |
|                | ID SET                | Create ID characters.  | LT4670                     |
|                | V-POSITION            | Set the vertical position of ID characters.                          | 0                          |
|                | H-POSITION            | Set the horizontal position of ID characters.                        | 0                          |
|                | SIZE                  | Select the size of ID characters.                                    | ×1                         |
|                | LEVEL                 | Select the luminance level of ID characters.                         | 100%                       |
|                | BLINK ON/OFF          | Turn the blinking of ID characters on or off.                        | OFF                        |
|                | BLINK ON TIME         | Set the blinking on-time of ID characters.                           | 1                          |
|                | BLINK OFF TIME        | Set the blinking off-time of ID characters.                          | 1                          |
|                | SCROLL                | Turn the scroll of ID characters on or off.                          | OFF                        |
|                | SCROLL SPEED          | Set the ID character scroll speed and direction.                     | 0                          |
| LOGO           | TRANSPARENCY          | Turn ID character background transparency on or off.                 | OFF                        |
|                | ON/OFF                | Turn the logo on or off.   | OFF                        |
|                | SELECT                | Select the logo.   | INT_1                      |
|                | V-POSITION            | Set the vertical logo position.                                      | 0                          |

| Item       | Description        | Initial Value  |
|------------|--------------------|--|
|            | H-POSITION         | Set the horizontal logo position.                                  |
|            | TRANSPARENCY       | Turn the logo transparency on or off.                              |
|            | TRANSPARENCY LEVEL | Set the transparency level of the logo.                            |
| MOVING BOX | ON/OFF             | Turn the moving box on or off.                                     |
|            | BOX COLOR          | Select the moving box color.                                       |
|            | V-SPEED            | Set the vertical moving box speed.                                 |
|            | H-SPEED            | Set the horizontal moving box speed.                               |
|            | V-SIZE             | Select the moving box height.                                      |
|            | H-SIZE             | Select the moving box width.                                       |
| CIRCLE     | ON/OFF             | Turn the circle on or off.   |
|            | SIZE               | Select the circle size.  |
|            | LEVEL              | Select the luminance level of the circle.                          |
|            | BLINK ON/OFF       | Turn the blinking of the circle on or off.                         |
|            | BLINK ON TIME      | Set the circle blinking on-time.                                   |
|            | BLINK OFF TIME     | Set the circle blinking off-time.                                  |
| TIME CODE  | ON/OFF             | Turn the time code on or off.                                      |
|            | V-POSITION         | Set the vertical time code position.                               |
|            | H-POSITION         | Set the horizontal time code position.                             |
|            | SIZE               | Select the time code size.   |
|            | LEVEL              | Select the time code luminance level.                              |
|            | TRANSPARENCY       | Turn time code background transparency on or off.                  |

| UTILITY         | LCD BACKLIGHT         | Select the backlight setting.   | ON                  |
|                 | KEY LOCK ON/OFF       | Turn on or off the key lock of LT4670.  | OFF                 |
| PRESET          | RECALL                | Load the selected preset.   | -                   |
|                 | POWER ON RECALL       | Select the number of the preset to be loaded at the time of startup.                | OFF                 |
|                 | STORE                 | Save the current settings to the selected preset number.                            | PRESET 0            |
|                 | COMMENT               | Add a comment to the selected preset.   | -                   |
|                 | COPY                  | Download the selected preset in TXT format.   | -                   |
|                 | UPLOAD                | Upload preset in TXT or PRE format to the LT4670.                                   | -                   |
| NETWORK         | IP ADDRESS            | The IP address of LT4670 is displayed.  | -                   |
|                 | SUBNET MASK           | The subnet mask of LT4670 is displayed.   | -                   |
|                 | DEFAULT GATEWAY       | The default gateway of LT4670 is displayed.   | -                   |
|                 | MAC ADDRESS           | The MAC address of LT4670 is displayed.   | -                   |
|                 | SETUP                 | Select whether to enable or disable the SNMP function and which version to support. | DISABLE             |
|                 | ENGINEID              | The Engine ID of SNMP V3 is displayed.  | -                   |
|                 | TRAP*                 | Turn the trap transmission destination on or off.                                   | OFF                 |
|                 | MANAGER IP*           | Set the IP address of the trap transmission destination.                            | 000.000.000.000     |
|                 | GET MIB               | Download the MIB file.  | -                   |
|                 | HTTP                  | The HTTP function settings is displayed. Fixed to ENABLE.                           | OFF                 |
|                 | NTP                   | Turn the NTP function on or off.  | OFF                 |
|                 | SERVER ADDRESS        | Set the address of the NTP server.  | 000.000.000.000     |
|                 | NTP RESTRICTIONS      | Set the NTP network.  | LOCAL               |
|                 | NTP STRATUM           | Set the NTP stratum.  | 8                   |
| TIME MANAGEMENT | INTERNAL CLOCK ADJUST | Set the internal date and time of the instrument.                                   | 2000/01/01 00:00:00 |
|                 | TIMEZONE OFFSET       | Select the time zone.   | UTC+9:00            |
|                 | JAM SYNC              | Turn the jam sync function on or off.   | ON                  |
|                 | JAM SYNC ADJUST       | Set when to reset the time code using the jam sync function.                        | 00:00:00            |
|                 | LEAP SECOND           | Set the adjustment time to which to insert the leap second.                         | 0:0:0               |
|                 | L-SYNC SETUP          | Select the L-SYNC setting.  | DISABLE             |
| DAYLIGHT SAVING | ON/OFF                | Turn the daylight saving time on or off.  | OFF                 |
|                 | SELECT FORMAT         | Select the daylight saving format.  | 01/01 00:00:00      |
|                 | CHANGE DAY            | Set the date and time when the daylight   | 1/1 0:0             |

| Item        |                     | Description   | Initial Value   |
|-------------|---------------------|---|-----------------|
|             |                     | saving time starts.                                       |                 |
|             | TIMECODE OFFSET     | Set the daylight saving time offset.                      | +0:0:0          |
|             | RETURN DAY          | Set the date and time when the daylight saving time ends. | 1/1 0:0         |
| GNSS OPTION | ANTENNA POWER       | Select the supply voltage to the GNSS antenna.            | OFF             |
|             | CABLE DELAY         | Set the delay correction value of the GNSS cable.         | 0               |
| PTP OPTION  | IP ADDRESS          | Set the IP address of the PTP option.                     | 192.168.000.001 |
|             | SUBNET MASK         | Set the subnet mask of the PTP option.                    | 255.255.255.000 |
|             | GATEWAY             | Set the default gateway of the PTP option.                | 192.168.000.254 |
|             | SFP/SFP+            | Select the SFP type.                                      | SFP+            |
|             | LINK AUTO RESET     | Set the reset operation.                                  | OFF             |
|             | PORT MIRRORING      | Select the settings for port mirroring.                   | OFF             |
| IP OPTION   | IP ADDRESS          | Set the IP address of the IP option.                      | 192.168.000.001 |
|             | SUBNET MASK         | Set the subnet mask of the IP option.                     | 255.255.255.000 |
|             | GATEWAY             | Set the default gateway of the IP option.                 | 192.168.000.254 |
|             | 10G/25G             | Select the SFP type.                                      | 25G             |
|             | RS-FEC              | Turn the RS-FEC on or off.                                | ON              |
|             | IGMP                | Select the IGMP version.                                  | AUTO            |
| ALARM       | ALARM POLARITY      | Select the alarm polarity.                                | POSITIVE        |
|             | UNIT POWER*         | Turn on or off the power supply unit alarm.               | OFF             |
|             | FAN POWER*          | Turn on or off the power supply unit fan alarm.           | OFF             |
|             | FAN FRONT           | Turn on or off the front fan unit alarm.                  | OFF             |
|             | FAN REAR            | Turn on or off the rear fan unit alarm.                   | OFF             |
|             | REFERENCE NO SIGNAL | Turn on or off the alarm for no reference signal.         | OFF             |
|             | REFERENCE STAY      | Turn the stay-in-sync alarm on or off.                    | OFF             |
|             | GNSS ANTENNA        | Turn the GNSS antenna alarm on or off.                    | OFF             |
|             | INT PLL             | Turn the crystal alarm on or off.                         | OFF             |
|             | TIME LAG            | Turn the time lag alarm on or off.                        | OFF             |
| LOG         | LIST                | The log is displayed in a pop-up.                         | -               |
|             | DELETE              | Delete the log.   | -               |
|             | DOWNLOAD            | Download the log in txt format.                           | -               |

# 19 MAINTENANCE

## 19.1 Calibration and Repair

This instrument has been carefully examined at the factory to ensure that its performance is in accordance with the standards. However, because of factors such as parts wearing out over time, the performance of the instrument may degrade. To ensure stable performance, we recommend that you have the instrument calibrated regularly. Also, if the instrument malfunctions, repairs are necessary. For repairs and calibration, contact your local Leader agent.

## 19.2 Replacement of Parts

To use this instrument for a long period of time, you need to replace its parts periodically. Replace parts when the specified "replacement interval" passes after the last replacement or when a malfunction occurs.

Parts are replaced by Leader or the designated service personnel. Contact your local Leader agent.

Table 19-1 | Replacement of parts

| No. | Name                | Model Number | Name                      | Replacement Interval | Quantity Used |
|-----|---------------------|--------------|---------------------------|----------------------|---------------|
| 1   | Power Supply Unit   | LT4670-SER11 | POWER UNIT                | 5                    | 1 or 2        |
| 2   | Fan Unit (*1)       | LP2184       | FAN UNIT                  | 5                    | 1             |
| 3   | Backup Battery (*2) | CR2450       | Coin-type lithium battery | 5                    | 1             |

\*1 There is a pair of fan units, one for the front panel and one for the rear panel.

\*2 The backup battery replacement requires returning the product to our factory.

### 19.2.1 Power Supply Unit Replacement

To replace the power supply unit, follow the procedure below.

If you have two power supply units installed, you can replace one of them with the power turned on.

The following procedure is an example in which you have two power supply units installed and replace POWER1 with the power of POWER2 on.

#### 1 Disconnect the power cable from power supply unit POWER1.

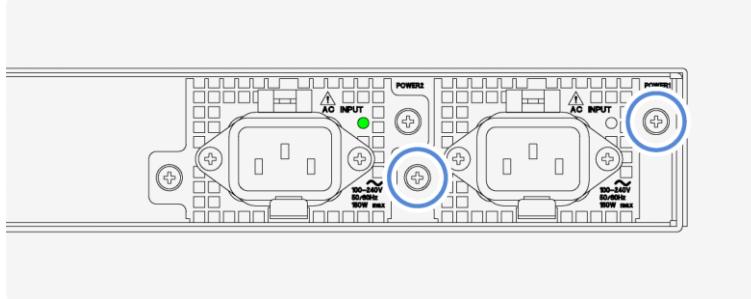

WARNING

Disconnect the power cable first and then remove the power supply unit.

Failure to follow this procedure may result in electric shock.

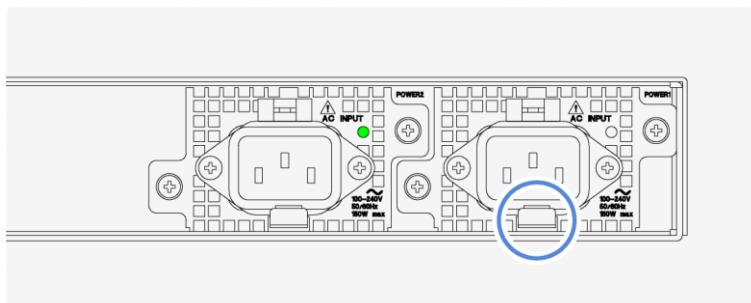

#### 2 Loosen the two screws.

The screws cannot be removed from the power supply unit even when they are loosened.

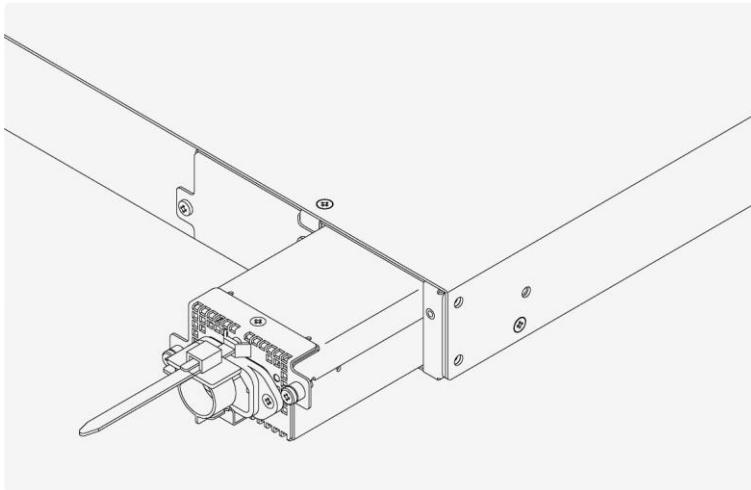

#### 3 Pull up the lever, and then pull out the power supply unit.

First, pull up the lever at the bottom of the power supply unit.

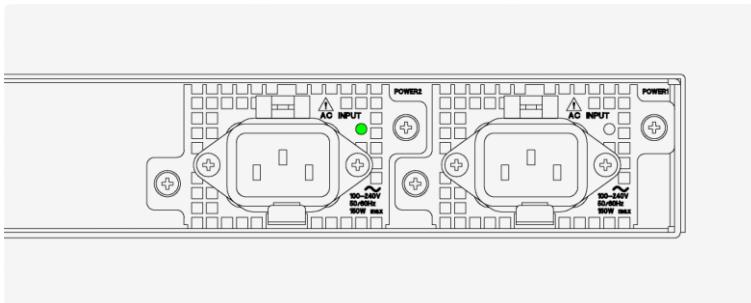

Next, with the lever pulled up, pull out the power supply unit.

#### 4 Insert a new power supply unit.

Insert the unit until it clicks into place.

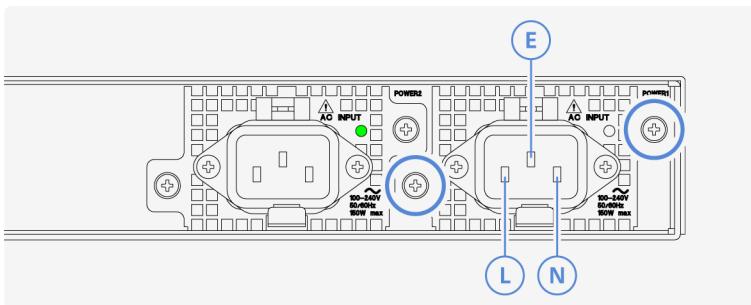

#### 5 Tighten the two screws.

##### WARNING

For safety verification, use a tester to confirm that the earth (E) and the screw are conductive, and that the power lines (L, N) are not short-circuited with the screw.

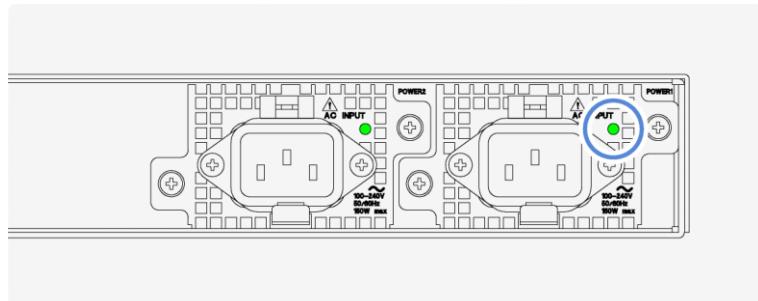

**6 Connect the power cable.**

WARNING

Install the power supply unit first and then connect the power cable.

Failure to follow this procedure may result in electric shock.

Do not replace the mains power cord with an improperly rated cord.

**7 Check that the LED on the power supply unit lights in green.**

### 19.2.2 Front Fan Unit Replacement

The instrument has two fan units installed, one on the front panel and one on the rear panel. You can replace one of these fan units with the power on.

The following procedure is an example in which you replace the fan unit on the front panel with the power on.

There is a pair of fan units, one for the front panel and one for the rear panel. Note that these fan units are different in shape.

#### WARNING

If you want to remove a fan unit with the power to the instrument on, follow the procedure below to stop the fan before removing the fan unit.

Failure to follow this procedure may result in injury.

#### CAUTION

When replacing a fan unit with the power on, install a new fan unit and start the fan quickly after stopping the existing fan. If the fan is stopped for an extended length of time, the internal temperature becomes very high, potentially damaging the instrument.

#### **1 Stop the fan on the front panel.**

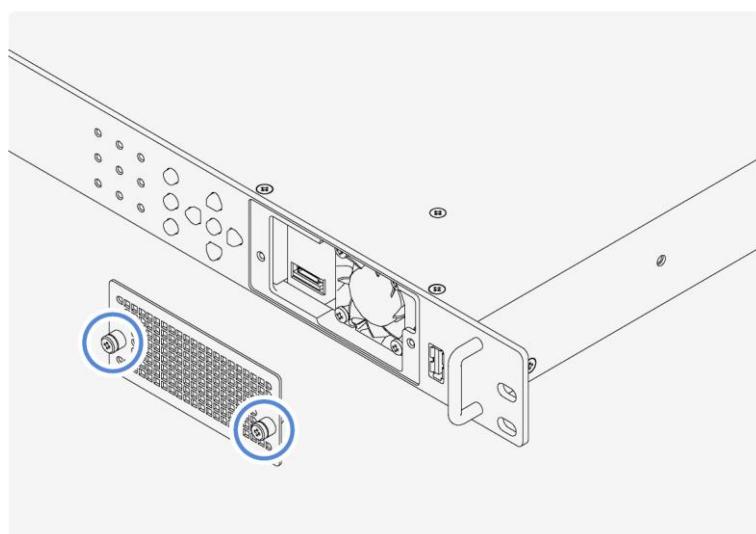

Press the CONFIG key several times until SYSTEM CONFIG is displayed. Then, make the necessary setting by following the procedure below.

SYSTEM CONFIG > FAN MAINTENANCE > FRONT > OFF

|   |   |
|---|---|
| 2 . F A N   M A I N T E N A N C E   F R O N T |   |
| <input type="checkbox"/> O N                  | <input checked="" type="checkbox"/> O F F |

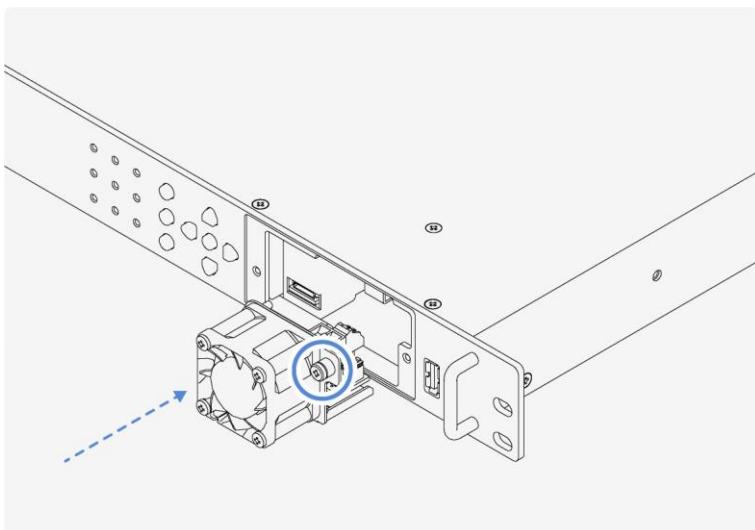

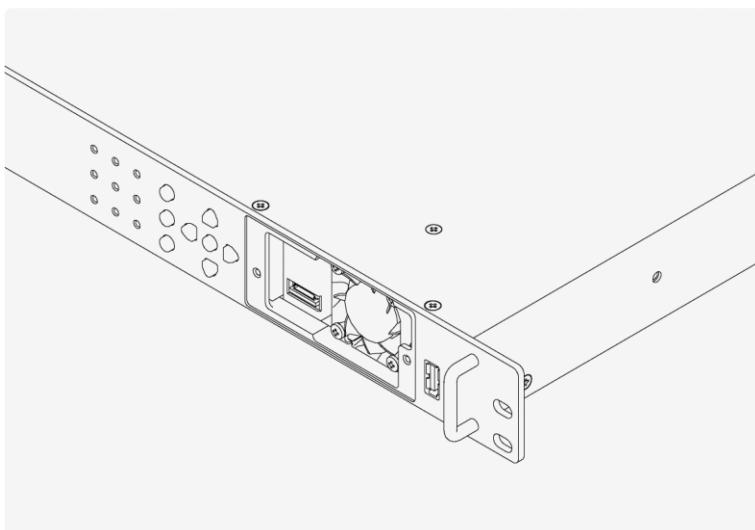

#### **2 Check that the fan on the front panel has stopped.**

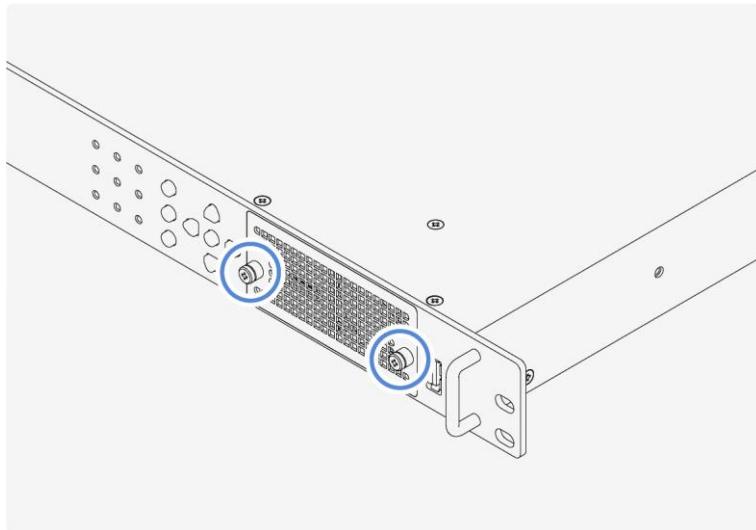

#### **3 Remove the two screws on the front panel, and take off the fan cover.**

**4 Loosen the two screws on the front panel, and pull out the fan unit.**

The screws cannot be removed from the fan unit even when they are loosened.

**5 Insert a new fan unit, and tighten the two screws.**

**6 Attach the fan cover, and tighten the two screws.****7 Start the fan on the front panel.**

Press the CONFIG key several times until SYSTEM CONFIG is displayed. Then, make the necessary setting by following the procedure below.

SYSTEM CONFIG > FAN MAINTENANCE > FRONT > ON

| 2 . F A N   M A I N T E N A N C E   F R O N T |                                |
|---|--------------------------------|
| <input checked="" type="checkbox"/> O N       | <input type="checkbox"/> O F F |

**8 Check that the fan on the front panel is operating.**

### 19.2.3 Rear Fan Unit Replacement

The instrument has two fan units installed, one on the front panel and one on the rear panel. You can replace one of these fan units with the power on.

The following procedure is an example in which you replace the fan unit on the rear panel with the power on.

There is a pair of fan units, one for the front panel and one for the rear panel. Note that these fan units are different in shape.

#### WARNING

If you want to remove a fan unit with the power to the instrument on, follow the procedure below to stop the fan before removing the fan unit.

Failure to follow this procedure may result in injury.

#### CAUTION

When replacing a fan unit with the power on, install a new fan unit and start the fan quickly after stopping the existing fan. If the fan is stopped for an extended length of time, the internal temperature becomes very high, potentially damaging the instrument.

#### **1 Stop the fan on the rear panel.**

Press the CONFIG key several times until SYSTEM CONFIG is displayed. Then, make the necessary setting by following the procedure below.

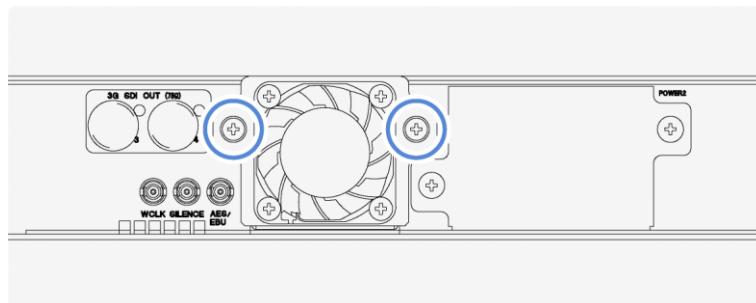

SYSTEM CONFIG > FAN MAINTENANCE > REAR > OFF

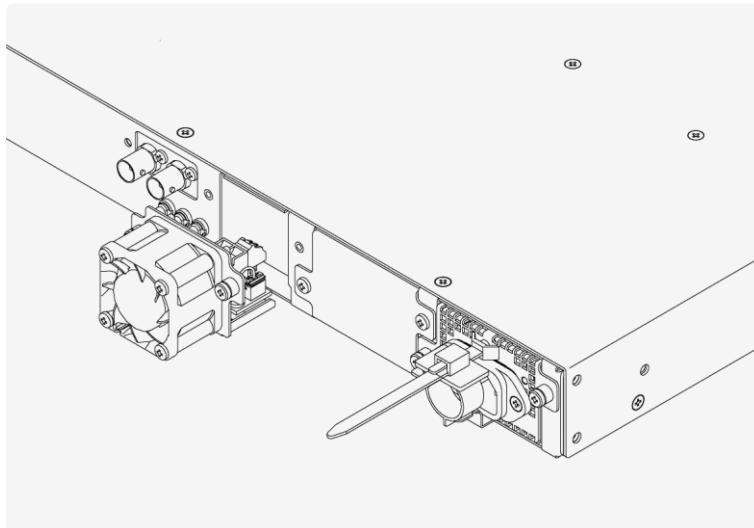

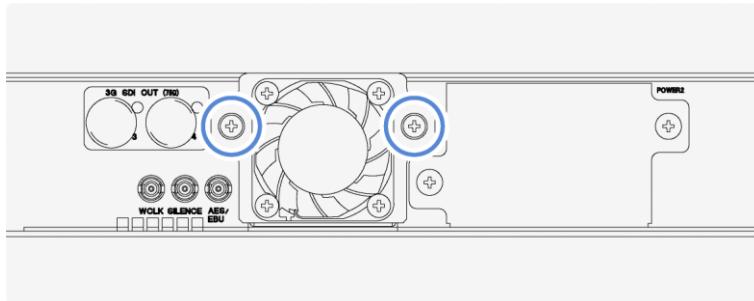

|   |   |
|---|---|
| 2 . F A N   M A I N T E N A N C E   R E A R |   |
| <input type="checkbox"/> O N                | <input checked="" type="checkbox"/> O F F |

#### **2 Check that the fan on the rear panel has stopped.**

#### **3 Loosen the two screws on the rear panel.**

The screws cannot be removed from the fan unit even when they are loosened.

**4 Pull out the fan unit.****5 Insert a new fan unit, and tighten the two screws.****6 Start the fan on the rear panel.**

Press the CONFIG key several times until SYSTEM CONFIG is displayed. Then, make the necessary setting by following the procedure below.

SYSTEM CONFIG > FAN MAINTENANCE > REAR > ON

|   |                                |
|---|--------------------------------|
| 2 . F A N   M A I N T E N A N C E   R E A R |                                |
| <input checked="" type="checkbox"/> O N     | <input type="checkbox"/> O F F |

**7 Check that the fan on the rear panel is operating.**

# 20 APPENDIX

## 20.1 List of Settings

The settings available when all options (SER01, SER02, SER03, SER04, SER11, and SER21) are added are listed below.

### 20.1.1 REFERENCE CONFIG Menu

Table 20-1 | REFERENCE CONFIG menu

| Setting             | Value   | Initial Value               |
|---------------------|---|-----------------------------|
| REFERENCE SOURCE    | INTERNAL / GENLOCK FMT-AUTO / GENLOCK FMT-MANUAL / 10MHz CW / GNSS / PTP1 / PTP2 / PTP1/2   | INTERNAL                    |
| GENLOCK FORMAT      | NTSC BB / NTSC BB+REF / NTSC BB+ID / NTSC BB+REF+ID / PAL BB / PAL BB+REF / 525/59.94I / 525/59.94P / 625/50I / 625/50P / 1125/60I / 1125/59.94I / 1125/50I / 1125/30P / 1125/29.97P / 1125/25P / 1125/24P / 1125/23.98P / 1125/24PsF / 1125/23.98PsF / 1125/60P / 1125/59.94P / 1125/50P / 1125/50P / 750/60P / 750/59.94P / 750/50P / 750/30P / 750/29.97P / 750/25P / 750/24P / 750/23.98P | NTSC BB (NTSC)<br>PAL (PAL) |
| GENLOCK TIMING FINE | ±100  | 0                           |

## 20.2 Release Notes

This manual is written for firmware version 2.9.

To view the firmware version, select "STATUS > CONFIG > SYSTEM > FIRMWARE VERSION".

### Ver. 2.9

- [LT4670] Added ON/OFF and threshold settings for the function to monitor the time difference between the time source and local time.
- [LT4670] When the time source is NTP, the time difference with the NTP server is now displayed on the browser's STATUS screen.
- [LT4670] Display phase difference from reference during TRACKING and RECOVERY.
- [SER01/SER03] Improved the daylight saving time specification to be based on local time instead of UTC time.
- [SER03] When an SFP is selected, added a link status display to the browser's STATUS screen.
- [SER03] Added a TIME LAG error display when the TIME SOURCE is PTP.
- [SER04] Supports 6G format.
- [SER04] Added serial numbers to NMOS resource labels.

### Ver. 2.8

- [LT4670] Changed the initial value of IMMEDIATE MODE TIME to OFF.
- [SER04] Changed the name of the ARIB pattern from UHDTV MFCB to COLOR BAR.

### Ver. 2.7

Minor changes

### Ver. 2.6

- [LT4670] Added the function to set STRATUM of the NTP server.
- [LT4670] When the reference source is BB, a SPECIFIC mode with improved noise resistance has been added (NTSC-BB only).
- [LT4670] Added a mode to the daylight saving time setting method that allows you to set it by month, week, and day of the week.
- [LT4670] Fixed an issue where the TRAP was swapped when a genlock error occurred / recovered.

### Ver. 2.5

- [LT4670] Added a mode in which an NTP server operates via a different network.
- [LT4670] Improved the device so that comments can be carried over when storing presets in the browser.
- [SER03] Added display of link status on the browser STATUS screen when SFP+ is selected.
- [SER03] Improved to record in the log when the UTC OFFSET is changed.
- [SER04/SER21] Added 4K PATTERN.

### Ver. 2.4

- [SER03] Improved to display the value in the PTP LOCK VALUE of the browser when

the reference source is PTP.

- [SER03] Improved to display the value in PACKET NOIZE in the browser when the reference source is PTP.
- [SER04] Supports NMOS.
- [SER04] Added LEGACY / SERIAL mode to 12G timing settings.

### **Ver. 2.3**

---

- [LT4670] The authentication function is supported in the browser.
- [LT4670] The preset upload function is supported in the browser.
- [LT4670] Improved the use of .TXT in preset file extensions.
- [LT4670] Improved to display a message when recalling a preset from the browser.
- [SER01] Expanded the GNSS CABLE DELAY setting range from ±100 [ns] to ±30,000 [ns].

### **Ver. 2.2**

---

- [SER04] Supports IP 4 stream output.
- [SER04] All functions are supported in the browser.

### **Ver. 2.1**

---

Minor changes

### **Ver. 2.0**

---

- [SER03] Fixed an issue where the reference status could not be obtained correctly via SNMP when REFERENCE SOURCE was PTP1 or PTP2.
- [SER04] Browsers support SDI only.

### **Ver. 1.9**

---

- [LT4670] Fixed so that an alarm can be obtained via SNMP when the time source and local time are out of sync.
- [SER02] Added a feature to make the background of the text display transparent for the ID character and time code display.
- [SER02] Changed the initial value of 0H TIMING from LEGACY to SERIAL.
- [SER04] 25G-IP/12G-SDI TSG option support.

### **Ver. 1.8**

---

- [LT4670] Added a function to automatically detect the VITC superimposed line and display the line number when REFERENCE SOURCE is BB genlock.
- [LT4670] Added a function that allows you to optionally set the VITC superimposition line on the BLACK output.
- [LT4670] Improved the browser's SET button to be displayed in 3D to show when it has been operated.
- [LT4670] Added LOG function to browser.
- [LT4670] Added ETHERNET MAC address display to the browser's SYSTEM CONFIG screen.
- [LT4670] Supports SNMP V3 in browser.

- [LT4670] Modified to blink the TIME LED to orange if the time obtained from TIME SOURCE and the internal time differ by more than 1 second.
- [LT4670] Modified to display the INTERNAL CLOCK ADJUST menu when TIME SOURCE is set to INTERNAL.
- [SER01] Added LEAP-SECOND display to the browser STATUS screen.
- [SER02] Added support for user patterns and color logos in the browser.
- [SER03] Added display of LEADER ID, PHASE LAG, and STEP settings to the browser STATUS screen.
- [SER03] PTP MAC address display to the browser's PTP CONFIG screen.

**Ver. 1.7**

---

Minor changes

**Ver. 1.6**

---

Minor changes

**Ver. 1.5**

- [LT4670] SNMP (v3) support.
- [SER02] User pattern support.
- [SER02] Color logo support.

**Ver. 1.4**

- 
- [LT4670] SNMP (v2c) support.

**Ver. 1.3**

- 
- [LT4670] Web Browser support.
  - [SER02/SER03] Added a mode to stop BLACK and SDI output in conjunction with BMCA auto switching.
  - [SER03] Added dual follower mode.
  - [SER03] Added manual recovery mode after BMCA auto switching.
  - [SER03] Improved to shorten the time until PTP packets are output when PTP mode is ENABLE MASTER.
  - [SER03] Added logging of BMCA switching operations.

**Ver. 1.2**

- 
- [LT4670] New release
